

Addition bingo (5×5)

Name: _____

Directions:

Practice math facts by playing bingo. Fill the boxes with numbers from 0–20 in random order. (There will be three numbers that you use twice.) Make two piles of index cards, with 11 cards in each pile. Number the cards in each pile from 0–10. Draw one card from each pile and add the two numbers together. Find the sum on your board and put a bingo chip or other small object on the number. Once you've filled all five boxes in a row, column, or diagonal, call out "Bingo!"

		Free Space
