PRAESIDIUM BECOMES A MAINROAD BRAND

Praesidium's security portfolio will now incorporate all Mainroad's security areas

Lisbon, 11 February 2014 - Mainroad, a reference player in the national Outsourcing of Information Technology (IT) market, has just reinforced its security areas by integrating Praesidium's security solutions portfolio, an international Risk Management Consulting company focused in the telecommunications sector.

Praesidium will now integrate Mainroad's information security solutions portfolio, including resources featuring a vast experience and international prestige, currently having over 150 clients in more than 85 countries worldwide.

"We are pleased to include Praesidium's solutions and skills in our Information Security solutions portfolio. This integration boosts the scope of our solutions in the security area, this way broadening our international presence and offering our clients a security solutions portfolio based on experienced resources, processes applying the best market practices, reference technologies and partners recognized on a global dimension. Consequently, we keep supplying our customers with the most efficient means to address the increasingly challenging threats they face regarding the protection of their data and communications." states Nuno Homem, Mainroad's General Manager.

Praesidium's offer, which includes a notable experience in network security, risk management and business continuity in the telecommunications sector, will be integrated in Mainroad's current security solutions portfolio.

Mainroad broadens its Information Security solution portfolio, supplying consulting, implementation, management and training solutions. The portfolio offers specialized Information Security solutions, including Security Operations Center (SOC), Security Information Monitoring, Network Security, Auditing & Assessment, Compliance & Governance, Business Continuity & Disaster Recovery which adopt and adapt the market's finest practices and methods (not only in line with ISO 27001, ISO 27002, OSSTM - Open Source Security Testing Methodology) and ISSAF - Information Systems Security Assessment Framework but also ISO 22301, ISO 22313 and BS 25777), to support organizations in the design, definition, implementation, evaluation and continuous management of risks to Information Security and Business Continuity.

###

About Mainroad
Mainroad, a leader in Outsourcing of Information Technology, supports its clients and makes more efficient use of their technological infrastructure. Offering a complete range of IT Managed Services, IT Security and Business Continuity, supported by its own redundant Data Centers, Mainroad ensures the maximum availability of systems and networks that support the critical business processes of its clients.
As a result of this specialization, Mainroad is also the right partner for the tailoring of systems, networks and technological processes to the dynamic needs of its clients' businesses, through consultancy services and IT Service Management and IT Performance tools, always in line with the objectives of efficiency and ITIL best practice.
