MAINROAD RELEASES A FREE IT MONITORING SOLUTION

Lisbon, 26 February 2013 - Mainroad, a leading player in the Iberian market for Information Technology (IT) Outsourcing, has just released to market, at no cost, the SNAP IT monitoring platform, for management and optimization of your business's most critical systems and services.

According to Pedro Leite, Head of the Managed Services Business Unit at Mainroad, "SNAP is meant to be used by IT organizations and service providers worldwide, since it allows the consolidation of the multiple monitoring needs of IT infrastructure in a platform that is easy to use and manage. This is a totally free version, without corporate constraints or the cost of licenses, which will increase business productivity and efficiency."

The SNAP monitoring solution is based on the CA Nimsoft Monitor technology and offers companies a robust tool, with business class features, in a single, unified and cost free solution for up to 30 monitored devices. The integrated visibility of critical systems allows fast and easy identification and resolution of any issues, allowing IT staff to reduce the time, cost and complexity associated with the monitoring of their IT environments. SNAP also provides alerts that will help manage potential problems before they affect the quality of service or end users.

Available for download, SNAP is a platform with a very fast implementation/activation time. SNAP allows businesses to monitor and obtain reports on the organization's most critical systems, freeing them from old, limited, expensive, or non-integrated and obsolete monitoring tools.

"By offering this free IT monitoring solution, Mainroad continues to support its customers in order to ensure a more efficient use of their technological infrastructure," adds Pedro Leite.

##

About Mainroad

Mainroad, a leader in Outsourcing of Information Technology, supports its clients and makes more efficient use of their technological infra-structure. Offering a complete range of services of IT Managed Services, IT Security and Business Continuity, supported by its own redundant Data Centres, Mainroad ensures the maximum availability of systems and networks that support the critical business processes of its clients, and has an end-to-end offer supported by the most recent models, including a complete and robust offer of Cloud Computing arising from a partnership with some of the main players in the market (Fujitsu and SAP amongst others).

As a result of this specialization, Mainroad is also the right partner for the adjustment of systems, networks and technological processes to the dynamic needs of its clients' businesses, through consultancy services and IT Service Management and IT Performance tools, always in line with the objectives of efficiency and the ITIL best practice.
