

Electrical safety

Electricity can be dangerous! It can give you an electric shock which can badly hurt or even kill you. Be a bright spark when you are near electricity and get switched on to a few simple rules.

Don't climb any trees near power lines. Electricity can jump through the air and hurt you.

It's easy to mix up dangerous power lines with telephone lines. Make sure you **keep away from all overhead lines!**

Never try and change a light bulb yourself. Always ask an adult.

Don't overload sockets by plugging too many things into them.

Be careful near broken street lights. Exposed wires can shock you.

 **Keep out of any places that have this sign. It means danger of death.**

Never touch plugs with wet hands, or poke things in sockets.
