Disclaimer

Clinical guidelines are developed and adopted to establish evidence-based clinical criteria for utilization management decisions. Clinical guidelines are applicable according to policy and plan type. The Plan may delegate utilization management decisions of certain services to third parties who may develop and adopt their own clinical criteria.

Coverage of services is subject to the terms, conditions, and limitations of a member's policy, as well as applicable state and federal law. Clinical guidelines are also subject to in-force criteria such as the Centers for Medicare & Medicaid Services (CMS) national coverage determination (NCD) or local coverage determination (LCD) for Medicare Advantage plans. Please refer to the member's policy documents (e.g., Certificate/Evidence of Coverage, Schedule of Benefits, Plan Formulary) or contact the Plan to confirm coverage.

Summary

Enteral nutrition products, also known as medical foods or medically necessary foods, are specially formulated and processed foods intended for the dietary management of specific diseases or medical conditions. The use of enteral nutrition products has been shown to reduce hospital stays, complications, and mortality rates in patients with various medical conditions, including malnutrition, cancer, gastrointestinal disorders, neurological disorders, and metabolic disorders. Enteral and oral nutritional supplements are medically necessary only when used to prevent, evaluate, or treat illness or disease in accordance with evidence-based standards of care.

The Plan members who have difficulty ingesting or digesting food or who are at risk for malnutrition may be eligible for oral nutritional supplements.

To be considered a medical food or medically necessary food, a product must be labeled for the dietary management of a medical disorder, disease, or condition and labeled to be used under medical supervision. These products provide essential nutrients to individuals who have limited or impaired capacity to ingest, digest, absorb, or metabolize regular food or certain nutrients, or who have other medically determined nutrient requirements that cannot be achieved by modifying their normal diet alone.

- For more information about medical foods or medically necessary foods, please refer to:
 - The FDA's "Frequently Asked Questions About Medical Foods; Third Edition" guidance document: <https://www.fda.gov/media/97726/download>.
 - The National Library of Medicine's DailyMed database (<https://dailymed.nlm.nih.gov>) which contains up-to-date labeling information for medical foods or medically necessary foods .

***Please note:** The inclusion or exclusion of a medical food, or medically necessary food, product in these resources does not imply or guarantee coverage or reimbursement by the Plan.*

Coverage of medical foods is subject to:

- *The terms and conditions of the member's policy at the time of service*
- *Applicable state and federal laws.*
- *The medical necessity criteria outlined in this policy.*
- *Product-specific clinical guidelines where applicable.*

Enteral nutrition products come in various forms, including nutritionally complete formulas, nutritionally incomplete formulas, formulas for metabolic disorders, and oral rehydration products. They are primarily administered through the gastrointestinal tract, either orally or via a feeding tube or catheter that delivers nutrients beyond the oral cavity, directly to the stomach, or even beyond the stomach by infusing calories directly to the small bowel.

Medical foods, or medically necessary foods, are typically obtained from hospitals, clinics, and other medical facilities, but certain specialized nutritional supplement products may be covered by the Plan's Pharmacy benefit. This includes products necessary for malabsorption disorders, renal dysfunction, tube feeding formulas, and lactose-free infant formulas, as well as other specialized products. Some medical foods, or medically necessary foods, may also be obtained through a prescription from a Pharmacy and covered by the Plan's Pharmacy benefit (i.e., supplied by a pharmacy provider upon the prescription of a physician within the scope of his or her practice). Additional Clinical Policy may apply for coverage via the Pharmacy benefit, such as:

- Nutritional Supplements – Infant Formulas
- Nutritional Supplements – Malabsorption Products
- Nutritional Supplements – Renal Dysfunction Products
- Nutritional Supplements – Tube Feeding Products

NOTE: All oral nutritional supplementation must be prescribed by a licensed provider and eligibility and cost of coverage are based on the member's Schedule of Benefits and Certificate of Coverage.

Definitions

“Elemental and Semi-Elemental Products” refers to products that contain partially or fully broken down macronutrients.

“Enteral Nutrition” is the administration of nutrition through the gastrointestinal (GI) tract. This can be done through:

1. the oral cavity, as in traditional eating
2. a nasogastric or orogastric tube (tube placed through the nose or mouth into the stomach)
3. a gastric or gastro-jejunal feeding tube (placed percutaneously directly into the stomach or small intestine, bypassing the oral cavity and esophagus)

“Failure to Thrive (FTT)” is a term applicable to children younger than 2 years old, and defined using WHO growth charts which can identify weight gain issues including:

1. Children weighing less than the 2nd percentile for gestation-corrected age and sex when plotted on the appropriate growth chart on more than one occasion (Note: Special charts for patients with genetic syndromes or prematurity may be applicable); *or*
2. Children with weight-for-length Z-score falling below 2; *or*
3. Decreased growth velocity of weight gain compared to growth in length.

“Food Additives” are products available over-the-counter that are ingested in addition to a regular diet. Examples include calorie supplements, digestive aids, fiber supplements, minerals, protein supplements, thickeners, and vitamins.

“Medical foods or Medically Necessary Foods” are a specific category of food products that are formulated to be consumed or administered enterally (through the digestive system) under the supervision of a physician for the dietary management of a specific disease or condition for which distinctive nutritional requirements have been established based on recognized scientific principles. Medical foods are intended to meet the distinctive nutritional needs of patients with certain medical or metabolic conditions who cannot meet their nutritional requirements through a normal diet alone. They are distinguished from the broader category of foods for special dietary use and from foods that make health claims by the requirement that medical foods are to be used under medical supervision.

“Oral Nutritional Supplements” are considered “medical foods” or “medically necessary foods” as defined by the FDA. They include metabolic formulas and modified low protein foods that are specially formulated and processed. They can be obtained in pharmacies or over-the-counter and are used for

patients with specific nutritional needs. Common trade brands include Ensure, Boost, Glucerna, Nepro, and Suplena.

“Parenteral Nutrition” refers to nutrition administered outside of the GI tract, such as intravenous feeding. It may be used when traditional enteral feeding is not possible due to obstructions, malabsorption, or congenital conditions. Parenteral nutrition is not discussed in this guideline.

“Poor Weight Gain” is a term applicable to children aged 2-18, and defined using the CDC Growth Charts and BMI-For-Age Charts which can identify weight gain issues including:

1. Abrupt weight loss following a period of normal growth along a well-established pattern of height and weight gain defined as crossing two or more major weight percentiles; *or*
2. Slow, steady weight gain below the fifth percentile of the NCHS growth curves; *or*
3. A growth curve proportionate to, but lower than, the child's expected height trajectory; *or*
4. Growth milestones that have been met but only with nutritional support consisting of high-calorie foods and/or nutritionally dense foods, where support with nutritional and calorie appropriate food is necessary.
