

# BeachCheck

## Keeping your favorite spot safe

The app has a live traffic-light system to help visitors and residents alike avoid busy hotspots. It allows users to check a particular beach or see a map indicating busier areas (red), less busy areas (amber) and those with plenty of available space (green). The app allows visitors to make informed choices as to which parts of the beach to visit, and which to avoid in order to maintain social distance during the coronavirus epidemic. The app also provides handy information on the beach's lifeguard status, whether toilets are open, and information on bylaws for cycling along the promenade and exercising your dog. Long-term, the app is more than just a solution to help with social distancing.

## Check Congestion at your favorite spot

We will help you check congestion at your favorite locations around the beach so that you can avoid those timings and places,

## Maintain Social Distance

Knowing the congestion status will help you to maintain social distance in order to prevent the spread of contagious diseases.

## Manage Locations

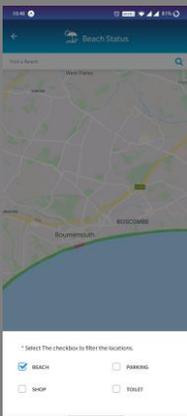

Government authorities or Administrator can manage the status of various locations. They can override the algorithm and change the statuses to whatever they need as per current situation on the ground.

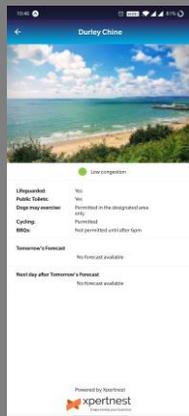

## How it works

1

Map view to quickly navigate to the place of your interest and find relevant information

2

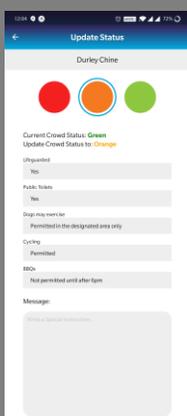

UpToDate information and congestion status for beach locations

3

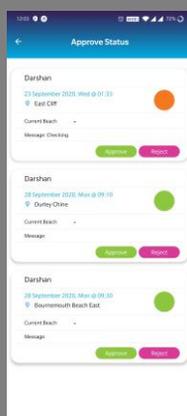

App allows different color codes to be selected for color blind individuals

4

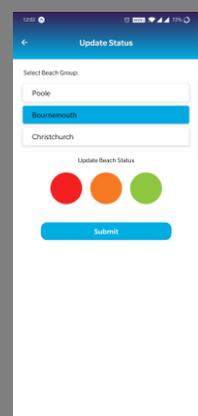

Manage status of the location and update key information on the fly

5

Approve status change for a location

6

Update status of all the locations for an organization in one go
