

E-scooter stations like you have never seen

**The definite solution to
sidewalk anarchy**

With effortless charging and
integration with your apps
and services

bikeep

Interested? Let's talk
hello@bikeep.com

Are you determined to tame the disarray that scooters can bring? Great. We are too.

To do so while keeping scooters, your streets and ultimately your community in good health is harder than it seems. Much harder, in fact.

That's why scooter stations from Bikekeep solve **all three main issues** you will inevitably face:

- 1** See if scooters are locked, unlocked or charging via a real-time API.
- 2** Configurable height to fit different models and types of scooters.
- 3** Optional sleeve add-on that ensures connectivity at all times.

PRODUCT GUIDE: A / Configurable leg height B / Secure locking C / Intuitive user experience

Manage your scooters your way and integrate with existing services.

Our philosophy is **your scooters, your Bikekeep**. You can build your own workflows based on whether scooters are locked, unlocked or charging.

Why? Because we believe that at the heart of innovation lies collaboration.

Send us a note at hello@bikekeep.com and let's start our partnership today.

HOW IT WORKS: Every scooter has a RFID chip securely attached and it will send out a notification to an endpoint given by you.
