

Cyware AI

AI agents that turn threat intelligence into clear decisions and fuel action

Your Team Is Trying to Consume Intelligence When It Should Be Deciding

Your analysts receive more threat intelligence than they can actually consume. Every advisory raises the same questions: does this apply to us, how urgent is it, and what should we do about it? Answering these questions for every indicator, vulnerability or threat actor takes hours, and the advisories that matter most wait in line blocked by the ones that don't. That gap, between receiving intelligence and knowing what to do with it, is where analysts want a solution.

Intelligence Built Around Your Organization

Cyware AI closes that gap. The Priority Intelligence Requirement Agent turns your organization's priorities into requirements and matches new intelligence against them on an ongoing schedule, signaling when something meaningful changes. From there, Cyware AI agents research threats, unify actor names, draft bulletins, and deliver briefings and vulnerability triage, so your team starts from a prioritized decision, not a feed. It surfaces what is relevant, with the context analysts need, pointing back to the original advisory, showing where the evidence runs out, and waits for your team to validate it before anyone acts.

The Impact You Want:

90%

Faster Triage

From advisory to decision

100%

Advisories Assessed

Every advisory checked against your profile

2+hrs

Saved Daily

Reading and filtering done before your team starts

1 in 5

Advisories Relevant

Noise filtered out, with the reason each one matters

What Cyware AI Delivers

What's Relevant to You

Intelligence filtered to your sector, your stack, and your supply chain, so your team stops reading what doesn't matter.

Reaches Every Member

The same prioritized intelligence travels across your network, all the way to the smallest member organization.

Analysis at Machine Speed

Agents research, prioritize, and prepare next steps neutralizing attackers' advantage from AI.

Cyware AI Agents

The Cyware AI agent portfolio spans Cyware Intel Exchange and Cyware Collaborate, with one relevance engine powering every agent.

Core Intelligence Agents

Priority Intelligence Requirement Agent

Turns your priorities into monitored requirements, tracks coverage, and powers every Cyware AI agent.

Intel Research Agent

Ask a research question and get analyst-grade answers drawn from your platform and vetted sources.

Alias Detection and Normalization Agent

Get one name for every actor. Your analysts approve each alias the agent suggests.

Threat Bulletin Agent

Get analyst-ready bulletin drafts with IOCs defanged and ATT&CK techniques already mapped.

Last-Mile Agents

Threat Briefing Agent

Get a daily executive summary and full analyst brief that ranks every advisory by relevance and explains why.

Vulnerability Watch Agent

Get CVEs ranked by urgency using KEV, EPSS, and exploitation signals, with a patch, mitigate, hunt, or monitor step for each.

powered by **Priority Intelligence Requirement Agent**

With Cyware AI, Your Team Gets More Than Intelligence

For Enterprises

Ingest and prioritize

Threat intelligence from every source, ranked by relevance using organizational context and PIRs.

Connect

Link threat intel with DRP and exposure management to see what's relevant to your attack surface.

Operationalize

Act on relevant intelligence through governed actioning across SIEM, EDR, ITSM, and 400+ security tools.

For Intel Sharing Networks

Build

Trusted sector, state, or government-specific intelligence-sharing communities.

Enrich

Deliver timely, relevant intelligence to every member organization.

Action

Move shared intelligence to the last mile with agents that recommend the next step for every member.

See Cyware AI prioritize intelligence for your organization.

Walk through the agents with our team, built around your own priorities.

About Cyware

Cyware is the agentic AI-native platform that turns threat intelligence into clear, confident action. Cyware AI brings relevance, context, and machine-speed analysis to every stage of the intelligence lifecycle. Through trusted, bidirectional sharing, Cyware delivers that intelligence across enterprises, MSSPs, government agencies, and sharing communities such as ISACs, ISAOs, and CERTs, down to the last member organization.
