

# Cyware Intelligence Suite

Operationalizing Threat Intelligence with Digital Risk Protection at Scale

## Where CTI Programs Break Down

### FRAGMENTED INTEL ECOSYSTEM

Feeds, enrichment, and monitoring scattered across tools, with no central hub to correlate them

### INTELLIGENCE WITHOUT ACTION

Manual workflows stall response, widen exposure windows, and burn analysts on low-context tasks.

### REACTIVE DIGITAL RISK POSTURE

Dark web, credential leaks, and brand abuse tracked in silos, with no attacker-eye view of your footprint.

### MONTHS TO STAND UP A CTI PROGRAM

Configuring feeds, sandboxes, and response tools drags on for months, delaying outcomes that should be immediate.

## The Solution

The Cyware Intelligence Suite is a fully pre-configured, Agentic AI-powered CTI program that lets security teams bypass months of setup and start detecting and responding to threats within days. Built on Cyware Intel Exchange, the Cyware Intelligence Suite offers native sandboxing, curated sectoral and malware infrastructure threat feeds, digital risk protection capabilities, integrated exposure management, bolstered with Agentic AI so that teams can operationalize threat intelligence rapidly and effectively.

## Key Benefits

### Operational in Days

Pre-configured intel program bypasses months of tool integration. Start detecting and responding to threats within days of deployment.

### Predict & Prevent Posture

Move from a reactive "detect and respond" to a proactive "predict and prevent" posture by unifying DRP signals with global threat intelligence.

### Automate Heavy Lifting

AI-driven enrichment and IntelOps playbooks push high-confidence IOCs across the entire security stack with no manual effort, eliminating analyst burnout.

### Single Platform, Full Coverage

Replace fragmented point tools with one unified hub from intel ingestion and analysis to exposure management, sandboxing, and automated response.

# What Modules are Available in Cyware Intelligence Suite

Cyware Intelligence Suite unifies six core capabilities into one operational hub. Built on Cyware Intel Exchange, an Agentic AI-powered Threat Intelligence Platform, it spans the full intel lifecycle: ingestion, enrichment, sandboxing, exposure management, and digital risk protection, all wired for automated action.

## Cyware Intel Exchange

- Ingest, de-duplicate, and normalize multi-source threat data
- The Threat Intelligence Agent summarizes reports, enriches IOCs, and profiles actors and malware families
- The Attack Flow Agent reconstructs adversary behavior sequences and maps them to MITRE ATT&CK

## Threat Intelligence Feeds

- Cyware malware threat feeds
- Cyware ransomware feed
- Sector-specific intelligence feeds tailored to industries such as healthcare, energy, and finance
- Infrastructure and campaign intelligence
- Optional Team Cymru threat feeds

## Digital Risk Protection

- Brand and domain impersonation protection
- Dark web and credential exposure monitoring, plus executive and VIP protection
- Agentic AI-driven IntelOps playbooks act on SOCRadar alerts to contextualize and automate response

## Exposure Management

- Compromised Credential Management with full source, timestamp, and risk
- Domain Sightings for dark web mentions of company domains
- Agentic AI correlates surfaced exposures with active threat campaigns and drives response through rules and playbooks

## Native Malware Analysis Sandbox

- Malware detonation and analysis
- IOC and artifact extraction
- Threat investigation and enrichment
- MITRE TTP mapping
- Private community execution

## Intel Operations

- The Contextual Intelligence Agent auto-generates summaries and suggests tags, metadata, and cross-entity relationships.
- The Alias Consolidation Agent unifies fragmented entity intelligence into a single logical unit.
- Playbook Builder and Custom Code Generator agents automate actioning across SIEM, EDR, and firewalls

## About Cyware

Cyware helps enterprise cybersecurity teams build platform-agnostic cyber fusion centers by delivering cyber threat intelligence and next-generation security orchestration and automation solutions. As a result, organizations can increase speed and accuracy while reducing costs and analyst burnout. Cyware's Cyber Fusion solutions enable secure collaboration, information sharing, and enhanced threat visibility for MSSPs, enterprises, government agencies, and sharing communities (ISAC/ISAO/CERTs and others) of all sizes and needs.
