THE MIB IN-PERSON HANDS-ON EXPERT COURSE

In order to participate, the attendee must be an EXPERT Masterclass student!
This course is limited to 30 participants.

This Hands-on course builds on the EXPERT Masterclass and is addressed to colleagues already displaying experience in the field of bone augmentation. It covers complex regenerative cases such as lateral defects, sinus floor operations as well as the premium class of augmentation, the discipline of vertical bone augmentation. All techniques will be practiced by means of specific synthetic models as well as on pig or sheep jaws.

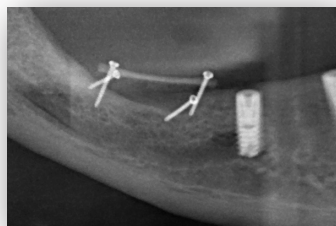

Particular significance will be attributed to the proper soft tissue approach, which is highly recommended in association with the vertical bone augmentation procedure such as the parallel technique and the right-angle technique. The Semilunar tunnel approach (STA) as well as the tunnel technique (Khoury) will be trained and the participants will master the harvesting of bone by means of several devices. Potential sources of errors will be addressed, and distinct guidelines will be provided in order to guarantee a predictable, successful outcome. All presented techniques will be exercised under the supervision of Dr. Frank Zastrow.
