

Blisterol

VISIT OFFICIAL WEBSITE

Blisterol is a dietary supplement with natural ingredients that claims to target and eliminate the herpes virus.

Feeling self-conscious because of your cold sores? Do you feel that others are judging your cold sores? Cold sores are common in America. About 50% of those between 14 and 49 years old have them. The percentage increases as you age.

[BLISTEROL SUPPLEMENT: OFFICIAL WEBSITE](#)

The virus is not yet cured, despite the fact that there are drugs to suppress outbreaks. It can only mean one thing: once outbreaks occur, cold sores will return. A herpes expert, frustrated by the lack progress in the area, claims to have developed a supplement which clears up cold sores and reduces the chances of recurrence. He believes that his solution will outperform current drugs.

What is Blisterol?

Blisterol, a dietary product created to help remove herpes, will reduce the risk of developing cold sores or other outbreaks of oral herpes. Ben Waller is the creator of Blisterol. He claims to be a doctor and has prescribed Acyclovir, Abreva, or both for his patients with outbreaks. Ben Waller, who was not satisfied with the results of his prescriptions for short-term use, decided to do research and create Blisterol. Blisterol is designed to deliver long-lasting results. Before examining the ingredients, it is important to understand the strategy behind the product.

What is the Blisterol effect?

Ben clarified the purpose of Blisterol, which is to address the causes of cold sores in people who have oral herpes. After examining existing research, Ben discovered that polysaccharide A or PSA was the perfect molecule. It has been proven that the *Bacteroides fragilis* bacteria in the gut is responsible for the production of PSA. He claims that PSA production will reduce inflammation in the body and prevent the activation herpes. The body will not produce enough PSA when there is too much or too little of this bacteria in the gut. This is a problem most people are unaware of.

In other words, imbalances can have a serious impact on herpes symptoms that spontaneously develop. Ben's intention was to use Blisterol as a way to bring *Bacteroides fragilis* levels back to normal while also providing the body the nutrients it needs to reduce the frequency of cold sores. Next, we will look at the ingredients chosen to combat the problem.

What are the main components in Blisterol?

The research studies that are cited on the official website indicate the supplement contains:

Fenugreek

Fenugreek is an herb whose white flowers, golden-brown seeds and pods are all used for culinary and medicinal purposes. This ingredient is used widely in Chinese and Ayurvedic medicine. It has been shown that it increases testosterone in men, lowers levels of bad and total cholesterol, improves blood sugar control, and reduces heartburn risk. There is no solid evidence that this ingredient can be used to prevent or treat cold sores. The same applies to the increase in *Bacteroides fragilis* and PSA.

L-Tyrosine

L-tyrosine is a non essential amino acid that can be produced from another amino acid, phenylalanine. It is needed to make neurotransmitters that are essential for communication between nerve cells, mood regulation, and melanin (the pigment responsible for skin and hair color). L-tyrosine is also a hormone regulator and helps to produce protein in the body. L-tyrosine is also difficult to link with the herpes symptoms mentioned above.

Saw Palmetto

The *Serenoa Repens* fruit is the source of saw palmetto . The ingredient is used for treating chronic pelvic pain and migraine headaches. It has also been claimed that it does not have any scientific backing. The majority of studies have not been conducted well, and therefore more research is needed. Saw palmetto could be beneficial for prostate health and hair development. Its anti-inflammatory properties may help in treating cold sores .

Oat Straw

Oat straw is simply crushed oat leaves and stems. The ingredient is said to be the most nutrient dense of the ones mentioned thus far. It's vital for nourishing your body, soothing the skin and strengthening your nervous system.

Oat straw consumption may improve bone health, immune function and reduce inflammation. In a study examining the effect of beta-glucan in oats, on mice with herpes simplex type 1 (HSV-1), beta-glucan was found to reduce the risk of HSV-1 infection .

FAQs (Frequently Asked Questions)

Q: What is the difference in herpes simplex types 1 and 2 virus?

Cold sores are the primary symptom for herpesvirus HSV-1. This virus is transmitted through oral contact. HSV-2 is the opposite, causing genital and genital herpes, which is transmitted through sexual contact.

Q - Can Blisterol be used safely?

Ben is convinced it's safe because Blisterol is made from natural ingredients, in small amounts. The ingredients listed have been tested and are safe to eat. It's not clear if the solution only contains these four ingredients. As of this writing, no labels were available. This makes it much harder to prove safety. We recommend that everyone first speak to customer service, and then a physician, before moving forward.

Q. Can Blisterol cause allergic reactions?

Blisterol, as per its claims, is free of allergens. It is best to avoid Blisterol if you have allergies to any of the ingredients listed above.

Q - Can anyone take Blisterol?

Blisterol can be used by anyone between the ages of 20 and 70.

Q. How should Blisterol medication be taken?

For best results, people should take one capsule with an 8-ounce water glass after breakfast every day for no longer than six months.

Q: What are the Blisterol benefits?

Blisterol can improve your mood, energy and reduce anxiety and stress.

Q: What is the estimated arrival time of Blisterol?

A - Blisterol Orders to the USA can take up 7 business days. Orders to other countries could take up 15 business days. It is recommended that individuals consult the Blisterol shipping policy for a list of countries to which they ship.

Q - Does Blisterol come with a money back guarantee?

Blisterol comes with a 60 day money back guarantee. If the severity of cold sores has not decreased within the specified period, customers can contact customer service to receive a refund. You can contact the customer service department for more information about the refund policy.

- Email: support@blisterol.com.
- Return address: 19655 East 35 Dr. #110, Aurora, CO 80011

Blisterol Purchase

Each Blisterol bottle will last for a full month. The supplement should be taken for at least 6 months, as the ingredients must have time to change the factors that keep herpes symptoms from being active. Ben and his team selected the following prices to encourage bulk purchases, while staying within budget:

- Blisterol - Buy one bottle for only \$69
- Purchase three Blisterol bottles for only \$59 each
- Six bottles of Blisterol only \$49 each
- **[Blisterol can only be purchased from the official website](#)**. This ensures that you get the "real thing"

while allowing the creators the opportunity to offer discounts.

Final Thoughts

Blisterol, a dietary product designed to treat cold sores, is an effective treatment. Dr. Ben Waller developed this solution to suppress herpes so that symptoms of facial herpes do not appear. He created a way to make sure that there was enough *Bacteroides fragilis* to produce PSA, which is essential for preventing the herpes virus.

What percentage of this information is accurate? Our editorial team looked at the ingredients more closely and were unable determine any connection between them, the bacteria, PSA or herpes activity as had been suggested. There is no proof that Blisterol's ingredients can cure cold sores. Their anti-inflammatory properties may be a factor. It is too early to tell if Blisterol can cure herpes until the creator provides more information.
