What is DentaTonic?

DentaTonic, a nutritional product designed to boost your saliva and infuse it with enzymes for optimal oral care.

DentaTonic, priced at \$69 a bottle and available exclusively through DentaTonic.com is available online only. It comes with a 180-day guarantee.

DentaTonic is a dissolvable tablet that you can take daily instead of chewing gum or swallowing capsules. Each tablet is a combination of active ingredients, including enzymes, that support healthy gums and teeth.

DentaTonic, a 100% natural and GMO-free product, is manufactured in the United States, in an FDA registered, GMP certified facility.

DentaTonic Benefits

DentaTonic, according to its official website, can provide benefits such as:

- Advanced oral enzymes that supercharge saliva
- Support healthy teeth and gums
- Keep your breath fresh
- Based on a scientifically-backed dental filtration advancement
- Plaques and harmful bacteria must be eliminated
- 100% natural, GMO-free ingredients

What is the DentaTonic Supplement?

DentaTonic is a saliva booster that provides your saliva with the ingredients it needs to boost its effects.

Saliva is a vital part of the digestive process. Your digestive system begins with saliva.

Your saliva begins the digestion process as soon as you start eating. It uses enzymes and probiotics in order to break down these ingredients and extract nutritional value. Your saliva starts the digestion process. This makes it easier for the stomach and guts to absorb active ingredients.

Your saliva may not work as it should if you suffer from oral or dental problems. It's possible that your saliva lacks the enzymes and probiotics necessary to digest the food. Your digestive system will be affected if your saliva doesn't work as it should.

DentaTonic disrupts this process, by supercharging saliva with valuable ingredients like enzymes to promote dental and oral health. DentaTonic is a proven blend of ingredients that can help with any oral or dental issues, as well as protecting your teeth and gums against future problems.

DentaTonic Ingredients

DentaTonic is a mouthwash that contains lactoperoxidase, as well as other active ingredients. It promotes oral and dental health.

The ingredients promote dental and oral health in different ways. Some ingredients "supercharge" saliva by increasing enzyme activity. Some ingredients support healthy teeth and gums in a different way.

DentaTonic is a combination of active ingredients that are designed to help you achieve a healthy smile.

Guava Fruit powder: Guava fruit powder is the first ingredient listed in DentaTonic's proprietary blend, meaning there are more guava fruits powders than any other ingredient. Some people take guava powder because of its antioxidant properties, which help to neutralize free radicals and support healthy inflammation throughout the body. Some people use guava powder to increase their fiber intake. Fiber and antioxidants both promote oral health.

Lactoperoxidase: The enzyme lactoperoxidase, which is secreted in your saliva, helps to fight bacteria, viruses,

and fungi. It is a vital part of the immune system. Lactoperoxidase can boost your immune system if you have an infection in your mouth or teeth. Lactoperoxidase has been linked to many important oral health effects in multiple studies. In a 2019 study for instance, lactoperoxidase in saliva is crucial for antimicrobial and antioxidant activity, thereby providing vital physiological functions. Researchers found that taking LPO as a supplement was the same as having your body naturally produce it, suggesting DentaTonic's LPO could have similar immune-boosting effects.

Detranase: Detranase is a sugar-producing enzyme. Sugar cane or sugar beet are used as an example. Dextranase can be used as a nutritional supplement to help break down sugars from the food you eat. DentaTonic tablets dissolve in the mouth and dextranase is released to help boost sugar absorption.

Lysozyme: Lysozyme is an enzyme that can be found in tears, saliva, and mucus. The enzyme is produced by humans, plants and animals. Lysozyme is primarily responsible for protecting your body from bacteria, viruses and fungi. It is antibacterial and immune-boosting. DentaTonic's lysozyme could be helpful if your mouth or gums are infected. Your body normally produces lysozyme. Infections can reduce the body's

ability create enough lysozyme. A lysozyme product like DentaTonic may help.

Lactoferrin: Lactoferrin, a protein that is found in milk. It is important for the development of children and nutrient intake. Lactoferrin has been called a "miracle" molecule by some, and many people take it daily as a health supplement. Lactoferrin has been known to be an important component in human breast milk. Lactoferrin is found in higher amounts than normal in breast milk immediately after a baby's birth. It plays a crucial role in the early development of a child.

MCH (Microcrystalline Hydroxyapatite): MCH is an important ingredient in DentaTonic to help with tooth care. Some toothpastes even contain MCH because of its effect on dental health and cavities. This natural molecule gives your body the nutrients it needs for growth of teeth and bones. MCH supplements can help with dental problems or rebuilding your teeth if needed. MCH seems to have a similar effect on serum calcium levels as taking a calcium dietary supplement. MCH can be taken instead of calcium to achieve similar results on bone and dental health.

Beta Glucanase: beta glucanase helps break down cell walls, such as the ones in vegetables and proteins you eat.

You may struggle to digest fibers and plants if you do not have enough beta-glucanase. You may feel bloated if you eat a lot of salads. This could be due to a lack of digestive enzymes, such as beta glucanase. Beta glucanase has been linked to improved digestion, easier food breakdown and other benefits. Many mushrooms contain a similar substance called beta-glucanase which has antioxidant properties throughout the body.

Amylase: The enzyme Amylase helps digest carbohydrates. Amylase is taken by some to aid in the breakdown of carbs. This allows the body to use the carbs for energy. Some people take amylase to reduce bloating, for example if they eat carbs and feel bloated. Amylase, although best known as an enzyme found in the gut, is also present in salivary glands. Your salivary glands release amylase, which helps your body to break down carbohydrates as soon as they reach your mouth. DentaTonic tablets can help you flood your mouth daily with amylase, which will break down carbohydrates.

DentaTonic's makers describe its ingredients as "a proprietary mixture of selected enzymes, proteins and other ingredients carefully selected to support your dental health."

DENTATONIC

**CLINICALLY RESEARCHED
INGREDIENTS**

- + Advanced Oral Enzymes
- + Supports Strong Teeth & Gums
- + Maintains Fresh Breath

**DIETARY SUPPLEMENT
30 TABLETS**

Supplement Facts
Serving Size: 1 Tablet
Servings Per Container: 30

Amount Per Serving	%DV
Proprietary Blend	400 mg
Guava Fruit Powder, Micro Crystalline Hydroxyapatite Complex, Beta-glucanase (endo-1,3(4)-), Dextranase, Amylase, Lactoperoxidase, Glucose oxidase, Amyloglucosidase, Lysozyme, Lactoferrin	

** Daily Value (DV) not established.

Other Ingredients: Xylitol, Microcrystalline Cellulose (AceCel 200), Magnesium Stearate, Natural Flavoring.

Lactoperoxidase and Oral Health

DentaTonic was created by a company that specifically chose ingredients to increase levels of lactoperoxidase.

DentaTonic also contains ingredients which promote the production lactoperoxidase, as well as complementary ingredients.

Lactoperoxidase is a compound found in saliva that can be used to maintain good oral health. This enzyme breaks down food while you are eating it. It kickstarts the digestion process.

Lactoperoxidase also has a second role. It helps to reduce the harmful effects of toxins in your mouth.

DentaTonic's makers claim that it protects specifically against hydrogen cyanide and also supports enzymes which combat bacteria and plaque. DentaTonic is designed to combat plaque, bacteria and hydrogen cyanide that can negatively impact oral health.

DentaTonic: Scientific Evidence

DentaTonic is a combination of enzymes and other ingredients that help to strengthen teeth and gums. Below, we'll go over some of the science that goes into DentaTonic.

First, Amylase has been proven to be one of DentaTonic's most effective enzymes. Amylase is best known as a digestive aid for the gut, but it also plays a role in saliva. In a 1999 study, salivary amylase was found to reduce dental plaque and cavity formation. You could be at greater risk of developing plaque and cavities if your saliva does not contain enough amylase. DentaTonic's amylase could help.

Microcrystalline Hydroxyapatite is a critical component of DentaTonic. Some toothpastes even use this natural molecule as a way to reduce plaque and prevent cavities.

Researchers found that a MCH-containing toothpaste reduced the incidence of early childhood dental cavities in a 2021 . Researchers divided 207 children in two groups. Half of the group used MCH toothpaste, and half took ordinary toothpaste. Researchers found that those who used MCH had significantly fewer enamel cavities than those using standard fluoride-only toothpaste.

Lactoferrin has been described as a "miracle molecule" by a 2022 report in molecules. Researchers found lactoferrin to have antimicrobial and antiviral properties, antioxidants, and immune-boosting qualities. Lactoferrin can help you defend your body against bacterial infection, such as the ones that lead to oral and dental problems. Lactoferrin can boost your immune system and help you fight disease, whether it's in your mouth or elsewhere on your body.

Lactoperoxidase, is one of DentaTonic's most important ingredients. It is essential for oral health and known to boost immunity and support immune function in general. Lactoperoxidase, or LPO, is a powerful antimicrobial agent. This was found in a 2019 report that appeared in the International Journal of Molecular Sciences. LPO is produced by your body to fight viruses, bacteria and fungi. However, taking LPO in supplement form can have similar effects. DentaTonic, or at least a portion of it, is

targeted to people with oral health issues. LPO can help your body fight against these oral health problems.

DentaTonic Supplement Facts Label

DentaTonic is a blend that contains natural ingredients associated with oral health and wellbeing. The ingredients are all contained in a proprietary blend. We don't have the exact doses of each ingredient in the proprietary blend but we know the total dose and the strongest ingredients.

DentaTonic contains the following active and inactive ingredients per tablet:

DentaTonic proprietary blend 400mg with guava powder, microcrystalline complex hydroxyapatite, beta-glucanase dextranase amylase lactoperoxidase glucose oxidase amyglucosidase lysozyme and lactoferrin

Other (inactive ingredients) include xylitol and other inactive ingredients such as microcrystalline cellulose. Magnesium stearate is also included.

DentaTonic Pricing

DentaTonic costs \$49 for a bottle. You can order online and pay only \$59 per bottle or \$69 to get a month's supply (30 tablets/30 servings) by ordering today. Take one tablet per day to maintain good oral health.
