What is DentiCore?

DentiCore, a natural dental product, is made with a combination of powerful plants and minerals. These work together to oxygenate the gums and teeth tissues.

DentiCore promotes oral hygiene and prevents dental problems by cleansing the airways from harmful bacteria.

Does DentiCore Work?

DentiCore, with its focus on improving blood vessel and tissue function, ensures your teeth and gums get the support they need to remain strong and healthy. DentiCore's carefully selected ingredients are supported by clinical studies that prove its effectiveness at promoting optimal dental health.

DentiCore Ingredients

1. Calcium

DentiCore contains calcium, a mineral that is essential for supporting healthy teeth and bones. Calcium helps to maintain the strength and integrity of tooth enamel. This reduces the risk of cavities and decay. Calcium also promotes oral health, as it supports gum health and contributes to the proper growth of teeth.

2. Iodine

Iodine helps maintain healthy thyroid function which has an indirect impact on oral health. Balanced thyroid function helps regulate metabolism and can prevent conditions such as inflammation that could affect gums.

Iodine is also good for your overall health and can help you maintain healthier gums and teeth.

3. Copper

DentiCore contains copper, an essential trace element that is vital for maintaining healthy connective tissue. This includes the gums. Its antimicrobial qualities help fight harmful bacteria, which can cause infections. Copper is also beneficial to the body's healing process.

4. Chromium

DentiCore contains chromium to support normal blood sugar levels. For oral health and overall health, it is essential to maintain stable blood sugar levels. Indirectly, by helping to regulate the glucose metabolism, chromium contributes to a healthy mouth and reduces the risk of dental problems.

5. Chlorella Vulgaris

Chlorella Vulgaris, a powerful algae rich in antioxidants and nutrients, is included in DentiCore because of its detoxifying properties. It cleanses the body from toxins that can contribute to oral issues. Chlorella vulgaris, by supporting detoxification on a whole, promotes an improved internal environment.

6. Chlorophyllin

Chlorophyllin, a chlorophyll derivative, is known for its deodorizing and cleansing properties. DentiCore's chlorophyllin helps to promote fresh breath by fighting bacteria that cause bad breath. It supports the body's cleansing processes and contributes to a healthier microbiome.

7. Boron Citrate Complex

DentiCore's complex of boron citrate offers a variety of benefits including bone health and wound recovery. Boron may help maintain healthy gum tissue and tooth enamel in oral health. Its anti-inflammatory properties may help to reduce oral inflammation and support overall gum health.

8. Shilajith Extraction

Shilajith is a natural substance that contains fulvic and mineral acid. It has revitalizing properties. DentiCore contains shilajith, which may promote tissue regeneration and repair in the mouth. Its anti-inflammatory and antioxidant effects may support gum health.
