already in the normal range[†]

DIETARY SUPPLEMENT — 60 CAPSULES

Hypertension is a very common condition. In the US, almost one third of adults are diagnosed with it. This condition can cause heart failure, strokes, kidney failure and loss of sight, among other problems.

[BP THRIVE SUPPLEMENT: OFFICIAL WEBSITE](#)

When the blood pressure increases, the pressure exerted by the blood against the artery walls is high. It is possible to live many years with the disease without ever knowing it.

By using all-natural supplements, you can avoid harmful side effects. The BP Thrive dietary supplement contains eight bio-available extracts of fruit flower bark that are rich in minerals and vitamins. The supplement provides lasting and satisfying results.

Continue reading to find out if BP Thrive is effective, what its ingredients are, the benefits, pros and cons, as well as pricing.

What is BP Thrive?

BP Thrive is an dietary supplement designed to maintain healthy blood pressure. This supplement contains pure and organic ingredients which will help you say goodbye to your blood pressure issues for good.

Each ingredient of BP Thrive has been proven effective by research. Pure and safe ingredients guarantee that the users will not experience any side effects. BP Thrive contains the correct concentration of ingredients to achieve maximum results.

The capsules are easy to swallow. BP Thrive contains no GMOs, is vegan friendly, and does not contain any toxic substances. The product has been reported to have made a significant difference by customers who have used it.

BP Thrive not only lowers blood pressure but also helps prevent other problems related to blood pressure. The supplement reduces symptoms of high blood pressure, such as fatigue and chest pain.

How does BP Thrive work?

Age, weight, alcohol consumption, smoking, poor diets, stress, family histories, gender and race are all factors that can cause an increase in blood pressure. Hypertension is also a risk factor for pre-existing conditions, such as kidney disease and diabetes.

Insufficient oxygen can cause irregularities in blood-pressure levels. Shortness of breath is one of the symptoms. Other symptoms include chest pain, an irregular heartbeat, vision changes and nose bleeding.

Hypertension has been dubbed a silent killer because many people suffer from it without displaying any symptoms. Regular monitoring of blood-pressure levels is therefore recommended.

Blood pressure increases when blood is pushed against the artery walls. The blood flow is disrupted and heart cells can be damaged or even die from a lack oxygen.

Heart failure can sometimes occur when it's difficult to deliver blood and oxygen to other organs.

Blood pressure is closely related to the size and flexibility of artery walls. For an adequate blood supply, the arteries must be flexible, elastic and strong. BP Thrive is a combination of ingredients that provide essential nutrients for the arteries, veins, and capillaries to function properly.

The active ingredients of the BP Thrive formulation relax the major blood vessels and improve their capacity to deliver blood and oxygen. The BP Thrive formula contains ashwagandha, a well-known ingredient that is used to treat blood pressure caused by stress. The element's relaxing effect reduces stress on the heart and makes it easier for the blood to flow.

Ingredients in BP Thrive

BP Thrive contains only organic and pure ingredients. Fruit, flower and bark extracts as well as vitamins and minerals are included in the eight essential components. The formula contains the perfect concentration of ingredients sourced from the purest sources around the globe. The eight ingredients that make up BP Thrive include:

Magnesium

Magnesium plays a vital role in DNA, protein and cell function. A dose of 500mg-1000mg has been shown to reduce blood pressure by up to 5.6/2.8mmHg. In just one month, it reduces systolic as well as diastolic pressure.

A magnesium deficiency can lead to high blood pressure. It can treat cardiovascular disease such as strokes, arterial disease and aortic diseases. Magnesium in the right amounts can relax blood vessels and normalize blood pressure.

GABA

GABA (gamma-aminobutyric) is an amino acid essential to neurotransmission. It inhibits certain brain signals and decreases the activity of the nervous system. GABA has biological functions such as increasing brain activity, regulating cardiovascular activity and lowering blood urea.

Renal function is reduced in people with high blood pressure. GABA lowers blood pressure by reducing renal diuresis. GABA was found to have an antihypertensive action when it reduced high blood pressure.

L-Theanine

L-theanine, a naturally occurring amino acid, is found in black tea as well as a particular type of mushroom. It increases the production of serotonin, dopamine and other hormones that improve mood and sleep. It also helps to produce cortisol which is a stress-relieving hormone. Reduced stress leads to relaxing blood vessels, and reduced blood pressure.

Ashwagandha

Ashwagandha is known to lower blood pressure. This adaptogen reduces stress and emotional tension in the body. The herb has anti-inflammation qualities, which helps prevent inflammation of the body's internal organs.

Holy Basil Leaf

The Holy Basil Leaf is indigenous to Southeast Asia. It is an adaptogen that reduces stress and promotes mental well-being. Holy basil reduces cholesterol in the liver, kidney, and heart and targets metabolic stress.

Baikal Skullcap

Baikal skullcap can also be called Chinese Skullcap. Traditional uses of the plant included treating respiratory infections and fever. This ingredient is known to reduce

circulation problems and prevent hypertension. Recent studies have shown that Basil Skullcap reduces symptoms of high blood pressure, such as nose bleeding, shortness breath, headache and more.

The BP Thrive™ Formula
