

Safe and Effective Pain Management

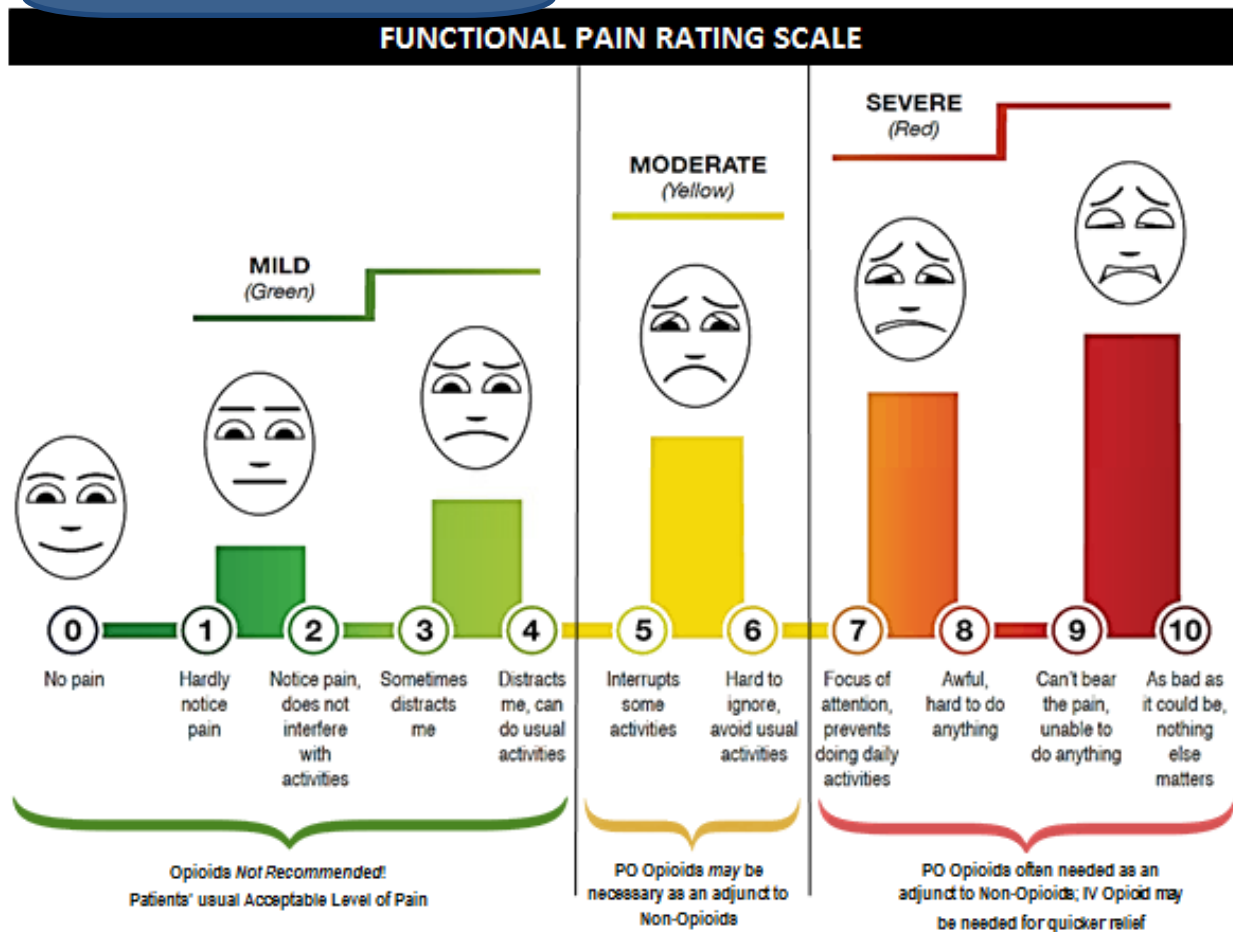

New Functional Pain Rating Scale

Safe and Effective Pain Management Strategies—Part 1 of 4

A new Functional Pain Rating Scale is being used across Sharp HealthCare that grades pain severity by its interference with normal function.

Rating 4 is now considered mild (and opioids not recommended for 0-4).

Use the new Functional Pain Rating Scale to:

- Help set realistic pain expectations for patients
- Individualize pain management for each patient and reassess daily
