

BARASTOC FIBRE-BEET MASH FAST FIVE OUR TOP TIPS!

Barastoc Fibre-Beet Mash is the ideal pre-exercise feed. With its combination of beet pulp, lucerne and oat fibre it provides a protective coating in your horses' stomach to help prevent acid splash during their workout. Try giving your horse a feed of Fibre Beet Mash about 30 minutes prior to riding (150g of pellets with 400ml of water).

During competition days or out on the road, flavour some water with a handful of Fibre-Beet Mash to help encourage them to drink. Because Fibre-Beet Mash is supplemented with peppermint, it makes it extremely palatable to horses and ponies.

Did you know you can prepare Barastoc Fibre-Beet Mash in advance? Just make sure to store in a cool area and consume within 24hrs of soaking.

Due to its mash texture and added peppermint, Barastoc Fibre-Beet Mash is ideal for hiding supplements. Additives easily combine with the wet mash, making sifting out a thing of the past!

Barastoc Fibre-Beet Mash expands to hold 3 times its weight in water providing excellent hydration and bulk to help your horse feel full. You can even soak at a rate of 5:1 to give cost effective chaff replacement and providing extra hydration on hot days.
