

Conflict Minerals Report 2019

Vodafone Conflict Minerals Report 2019

This Conflict Minerals Report for the year ended 31 December 2019 is presented by Vodafone Group Plc ('Vodafone') in accordance with Rule 13p-1 (the 'Rule') under the US Securities Exchange Act of 1934 (the 'Exchange Act').

The Rule applies to companies required to file reports with the US Securities and Exchange Commission ('SEC') under Section 13(a) or 15(d) of the Exchange Act if any of the products they manufacture or contract to manufacture contain conflict minerals necessary to the functionality or production of the product ('in-scope products').

As defined by the content requirements of SEC Form SD, 'conflict minerals' include columbite-tantalite ('coltan'), cassiterite, wolframite and/or gold or their derivatives, which are limited to tantalum, tin and tungsten (each a '3TG metal'). Please refer to the requirements of SEC Form SD for definitions of many of the terms used in this report, including 'Covered Countries' (Democratic Republic of Congo ('DRC') or an adjoining country).

Company overview

Vodafone Group is one of the world's leading technology communications providers, connecting people and organisations of all sizes to the digital society. We have extensive experience in connectivity, convergence and the Internet of Things, as well as championing mobile financial services and digital transformation in emerging markets.

Vodafone Group has mobile operations in 22 countries, partners with mobile networks in 42 more, and fixed broadband operations in 17 markets. As of 31 March 2020, Vodafone Group had 362 million customers, including 115 million mobile customers, 25 million broadband customers and 22 million TV customers in Europe and 168 million mobile customers in Africa. We generated revenues of €44.97 billion in the financial year ended 31 March 2020.

Vodafone's American Depositary Shares are listed on the NASDAQ Global Select Market LLC ('NASDAQ'). We are therefore subject to the NASDAQ listing rules and file reports with the SEC under Section 13(a) of the Exchange Act.

We use electronic equipment in our operations and we sell a range of products to our customers, including mobile phones, tablets, SIM cards, fixed broadband routers, TV set-top boxes and Internet of Things devices. Vodafone Automotive also sells electronic products, such as anti-theft, parking assistance and telematics systems, to vehicle manufacturers.

Most of our products, such as smartphones, routers, and tablets that we resell to customers are produced by major companies with internationally recognised brands that report sustainability efforts in their own right. We also offer our customers a range of devices that carry the Vodafone logo. These devices are designed and built on our behalf by suppliers known as original design manufacturers ('ODMs'). We contract ODMs to design and manufacture these products according to our specifications. Vodafone Automotive also operates a small technology device manufacturing plant in Italy.

The agreements in place with our suppliers give Vodafone the right to perform supplier quality audits and ensure that we only select vendors that work with integrity, safety and quality. Our Sustainable Business Report provides more information about our supply chain and how we manage relevant sustainability risks. It is available on our [website](#).

In cases where we contract to manufacture products from suppliers, we have some degree of influence over the manufacturing of the product, such as specifying certain criteria for the materials, parts or components to be used. However, we do not own, operate or control the manufacturing plants where they are made.

Applicability

Our products contain numerous components that may contain one or more of the 3TG metals. For example, tin is often used as a soldering material for electronic components, and gold and tantalum are typically used in components such as connectors or capacitors.

We conduct an annual analysis of procurement and manufacturing activities to determine which products the Rule applies to ('in-scope products') by:

- identifying the products that are likely to include 3TG metals. We do this by reviewing product categories through our supplier qualification process and, for Vodafone Automotive products, checking whether components are listed as including 3TG metals on the automotive industry's [International Material Data System](#).
- determining which of these products are likely to be ones that we contract to manufacture or, in the case of Vodafone Automotive products, manufacture.

For the year ended 31 December 2019, we identified seven types of products that were likely to include in-scope products:

- selected handsets purchased from ODMs
- connected home devices (i.e. routers, modems, set-top boxes and femtocells)
- datacards (i.e. mobile broadband dongles)

- Internet of Things tracker devices
- vehicle anti-theft systems, such as alarm sirens and intrusion sensors
- parking assistance products, such as sensors and electronic units that assist drivers in parking their vehicles
- telematic control units for vehicles, such as tracking systems based on Global System for Mobile Communications ('GSM') and Global Positioning System ('GPS') technologies.

Based on this applicability assessment, we identified 837 in-scope products that we purchased or technically accepted (the point at which our operating companies can begin ordering products from suppliers and selling them on to customers) during the year ended 31 December 2019. This is a significant increase from the year before because Vodafone Automotive products with small variations (colour, software, etc.) were previously counted as one product type.

The products identified as in-scope only account for a relatively small proportion (around 7%) of our total expenditure with suppliers that supply the above-mentioned products. We sourced these in-scope products, or their components, from 66 suppliers ('in-scope suppliers') in the year ended 31 December 2019.

Reasonable Country of Origin Inquiry

In accordance with the Rule, we carried out a Reasonable Country of Origin Inquiry ('RCOI') and due diligence process to determine the origin of the 3TG metals used in our in-scope products.

The smelters and refiners ('Smelters') that produce 3TG metals, and the mines from which the minerals are originally sourced, are many steps away from Vodafone in the supply chain. We therefore rely on our suppliers to provide information to support our due diligence efforts.

We include conflict minerals reporting requirements as part of our suppliers' contractual obligations. These require in-scope suppliers to conduct due diligence to identify the origin of the 3TG metals in the components or products they sell to us and ensure that the 3TG metals are sourced responsibly. Our direct suppliers are expected to extend similar requirements to their own suppliers and cascade them down the supply chain until the origin of the 3TG metals contained in the products supplied to us (either directly or indirectly) can be identified.

We conduct our RCOI based on the Smelter information received from our in-scope suppliers. We then compare this with the

RCOI database compiled by the Responsible Minerals Initiative ('RMI'), an industry initiative in which we participate to support the collection of information, increase transparency and establish a chain of custody over the mineral supply chain. The RCOI database contains aggregated data on the origins of 3TG metals from Smelters that conform with the RMI's Responsible Minerals Assurance Process ('RMAP').

In some cases, information provided by our direct suppliers is incomplete and suppliers are unable to confirm the country of origin information for 3TG metals.

RCOI conclusion

Based on data collected from our suppliers for the year ended 31 December 2019, we have reason to believe that some 3TG metals contained in our products originate from Covered Countries and we have conducted due diligence as described in this report.

See Annex for the compiled countries of origin information (see [page 13](#)) and a list of the confirmed Smelters included in the conflict minerals reports submitted by our suppliers (see [page 8](#)).

Vodafone's commitment to sustainable business in the DRC

Our subsidiary, Vodacom Group Limited ('Vodacom'), is the largest provider of telecommunications services in the DRC, with revenues of over US\$512 million in the financial year ended 31 March 2020.

We have been operating in the country, through our Vodacom subsidiary, since 2002. The supply of our products follows the same centralised procurement process in the DRC as it does in the other countries where we operate.

We contribute to the improvement of socio-economic conditions on the ground through technology solutions such as M-Pesa, which was launched in the DRC in

2007 and today is used for secure banking by 12 million customers.

As a service provider, we have limited possibilities for meaningful impact in the conflict minerals ecosystem through our supply chain. Nevertheless, we are constantly looking for opportunities to improve lives through connectivity and technology solutions and to work with other stakeholders to contribute to the positive socio-economic development in all the countries we operate in.

For more on our commitment to sustainable business in the DRC, see [Vodacom's Sustainability Report](#).

Responsible mineral sourcing

3TG metals come from many different Smelters in a complex and often opaque supply chain. Minerals are extracted from mines, Smelters procure minerals and process them into useable metals, and these metals are then used to make components to go into electronic products.

We conduct due diligence to support our commitment to source minerals responsibly and to comply with relevant disclosure regulations. Our aim is to ensure that none of the products or components we buy contain 3TG metals that have helped to fund conflict.

Our process is designed to comply with the Rule and interpretive guidance, and conform with the internationally recognised framework set out in the Organisation for Economic Co-operation and Development ('OECD') Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas (Third Edition) ('OECD Due Diligence Guidance').

Due diligence

Our due diligence process follows the five-step framework set out in the OECD Due Diligence Guidance.

Step 1: Establish strong company management systems

We have established a policy related to the sourcing of conflict minerals. Overall accountability for implementation of the policy lies with our Group Chief Commercial Operations and Strategy Officer, who sits on our Group Executive Committee. The policy is overseen by our Group Product and Services Director, who leads the function responsible for sourcing mobile phones, tablets, set-top boxes and other such devices. Representatives from corporate functions provide legal expertise and subject matter expertise, and our procurement teams manage relationships with in-scope suppliers, all of whom support the implementation of due diligence activities.

We work together with specialist consultancy service providers to assist in tracking data, assessing risks and preparing our reporting. Additionally, we have engaged with a third party auditor to internally assess the processes and procedures of our conflict minerals programme.

We have established a process to identify in-scope suppliers (as outlined in the Applicability section on [page 3](#)). We include conflict minerals clauses in supplier contracts. These require suppliers to conduct due diligence to identify the origin of 3TG metals in the components or products they sell to us and ensure that the minerals or elements are not from a source which directly or indirectly finances or benefits armed groups in the Covered Countries. Our

direct suppliers are expected to extend similar requirements to their own suppliers and cascade them down the supply chain until the origin of 3TG metals contained in the products supplied to us (either directly or indirectly) can be identified.

The identified in-scope suppliers must report on their progress through the RMI Conflict Minerals Reporting Template ('CMRT'), which they are required to complete on an annual basis. The CMRT is designed to identify the Smelters from which any 3TG metals in each in-scope product are sourced.

We engage with in-scope suppliers to raise awareness of our processes and requirements, and help them understand how to meet the requirements of the contract clause on conflict minerals. We also share best-practice advice on how to complete the CMRT and apply lessons learned from the previous year's disclosure process. In addition, we provide a dedicated point of contact at Vodafone to respond to suppliers' questions on conflict minerals reporting.

Our established *Speak Up* process, outlined in our Code of Conduct, provides a company-level grievance mechanism for reporting any concerns related to allegations of illegal or unethical practices or breaches of Vodafone's Code of Conduct and policies, including those related to conflict minerals. It can be used by employees, contractors, suppliers' employees or contractors, business partners or any other individual or organisation to report concerns, anonymously if they prefer. Information on supplier ethics and *Speak Up* is available on our [website](#).

Step 2: Identify and assess risks in the supply chain

To identify and assess conflict mineral risk in our supply chain, we requested that all 66 suppliers of in-scope products (identified through the applicability assessment outlined on [page 3](#)) complete the CMRT. We analysed their responses to the CMRT. Where risks were identified, we followed up with suppliers to assess these.

We compared the Smelters identified in the supplier responses with the RMI List of All Operational 3TG Smelters, the RMI Smelter Revision History List, The RMI List of Conformant Smelters and the RMI List of Active Smelters. These lists are maintained online by the RMI and are frequently updated to reflect changes in the reported status of Smelters.

See Annex ([page 8](#)) for a list of RMI confirmed operational Smelters, which were included in the reports submitted by our suppliers, together with their status of RMAP Conformant, Active or Non-conformant.

RMAP Conformant Smelters have successfully completed a RMAP audit and maintain good standing in the programme through a continual validation process. They have the systems and processes in place to support responsible sourcing of raw materials and can provide evidence to support their sourcing activities.

RMAP Active Smelters have signed an Agreement for the Exchange of Confidential Information and Auditee Agreement contracts. If they are deemed by the RMI not to be progressing toward a RMAP audit, gap closure or re-audit for a period of more than 90 days, they will be removed from the Active list.

Step 3: Design and implement a strategy to respond to identified risks

Our strategy to respond to identified risks includes a range of measures that form part of our due diligence process. We have established a communication and escalation process to notify and engage, if required, our Group Chief Commercial Operations and Strategy Officer where any potentially significant risks are identified.

We review supplier responses to the CMRT and follow up with suppliers to request clarification or more complete responses where necessary. Where any risks are identified, we engage with suppliers and request their commitment to corrective actions to manage these risks, including a commitment to improve data quality.

If in-scope suppliers identify Smelters within our supply chain that are either RMAP Non-conformant or Active, we ask them to encourage these Smelters to participate in the RMAP process or consider alternate sourcing arrangements.

We also participate in wider industry efforts to support responsible sourcing and audit Smelters' due diligence activities through our membership (member code: VODA) of the RMI (see box).

Step 4: Carry out independent third-party audits of Smelter due diligence practices

We do not directly purchase raw minerals, ores or 3TG metals. We are many steps removed from the mines and Smelters that supply the minerals, ores and 3TG metals contained in our products. Therefore, our due diligence efforts rely on cross-industry initiatives, such as the RMI, to conduct audits of Smelters' due diligence practices.

Step 5: Report annually on supply chain due diligence

In accordance with the Rule and the OECD Due Diligence Guidance, this report is publicly available on our [website](#).

Participating in the RMI

We participate in industry efforts to support responsible sourcing of minerals as a member of the RMI. The RMI works to validate Smelters as conflict-free and assists companies in making informed decisions about conflict minerals in their supply chain.

The data that informs certain statements in this declaration was obtained through our membership in the RMI, using the RCOI report for the member listed as VODA.

Determination

As we do not directly purchase raw minerals, ores or 3TG metals, we rely on our direct (Tier 1) suppliers to gather information about Smelters in our supply chain.

We received CMRT responses for the year ended 31 December 2019 from all 66 in-scope suppliers (100%). All RMI reference data and supplier information was based on data received as of 6 March 2020.

Based on supplier responses for the year ended 31 December 2019, we have identified 295 Smelters that are on the RMAP list of known Smelters. Of these, 80% were either RMAP Conformant or Active: 232 are certified as RMAP Conformant and five are Active. The remaining 58 Smelters were identified as RMAP Non-conformant.

Based on the RMI RCOI information provided for Conformant smelters, 71 Smelters may source

from Covered Countries. See Annex for the list of identified Smelters and their RMAP status (see [page 8](#)).

We will engage with the in-scope suppliers that have identified the Non-conformant Smelters as being within their supply chain to encourage the Smelters to become RMAP Conformant or remove them from the supply chain.

The data provided by suppliers continues to improve with additional Smelter details being included in suppliers' responses. However, there are still gaps in the information provided where suppliers further down the supply chain have failed to provide details for all components.

Responses from suppliers showed that there are still significant challenges relating to information about the country of origin of 3TG metals, and the Smelters from which 3TG metals were sourced, as this information is

often unavailable, incomplete or potentially erroneous. We will continue engaging with suppliers to improve the completeness and quality of information provided.

Based on the RCOI enquiry and due diligence efforts described above, we have determined that some conflict minerals contained in our in-scope products originated in Covered Countries. As a result of the incompleteness of some suppliers' responses received so far through our ongoing due diligence programme, we are unable to determine the origin of all conflict minerals contained in all our in-scope products. Nonetheless, we have made a reasonable good-faith effort to collect and evaluate the information concerning Smelters based on the information provided by our suppliers.

Continuous improvement efforts to mitigate risk

We are taking a range of steps to enhance the due diligence process and further mitigate any risk that conflict minerals used in the company's products may benefit armed groups.

We are engaging with suppliers to:

- continuously encourage them to put a conflict minerals policy in place or improve their existing conflict minerals policies;
- improve the completeness and quality of information provided, particularly in relation to the identification of Smelters and the country of origin of 3TG metals, and in providing CMRT information on Smelters at product level; and
- seek their commitment to implement further improvements in relation to due diligence processes, including asking them to reach out to RMAP Non-conformant Smelters identified as being within our supply chain to encourage these Smelters to undergo a RMAP audit.

Through the RMI, we are participating in industry efforts to address issues related to conflict minerals in supply chains, increase the number of Smelters sourcing from the Covered Countries that are conflict-free and improve country of origin information.

We use legal and contractual mechanisms to obligate our suppliers to comply with relevant regulations.

Our aim is to ensure minerals used in our supply chain do not fund conflict, while continuing to support local economies by allowing the use of verified conflict-free material from Covered Countries.

Annex: list of known smelters

These tables list the Smelters identified through supplier CMRT responses for the year ended 31 December 2019 and their RMAP status as of 6 March 2020.

Annex: list of known smelters

Active

Active: Gold

Smelter ID	Standard smelter name	Country location
CID002290	SAFINA A.S.	Czechia

Active: Tantalum

Smelter ID	Standard smelter name	Country location
CID003402	CP Metals Inc.	USA

Active: Tin

Smelter ID	Standard smelter name	Country location
CID003409	Precious Minerals and Smelting Limited	India

Active: Tungsten

Smelter ID	Standard smelter name	Country location
CID002647	Jiangxi Dayu Longxintai Tungsten Co., Ltd.	China
CID003408	JSC "Kirovgrad Hard Alloys Plant"	Russian Federation

Non-conformant

Non-conformant: Gold

Smelter ID	Standard smelter name	Country location
CID000103	Atasay Kuyumculuk Sanayi Ve Ticaret A.S.	Turkey
CID000180	Caridad	Mexico
CID000197	Yunnan Copper Industry Co., Ltd.	China
CID000343	Daye Non-Ferrous Metals Mining Ltd.	China
CID000522	Refinery of Seemine Gold Co., Ltd.	China
CID000651	Guoda Safina High-Tech Environmental Refinery Co., Ltd.	China
CID000671	Hangzhou Fuchunjiang Smelting Co., Ltd.	China
CID000767	Hunan Chenzhou Mining Co., Ltd.	China
CID000773	Hunan Guiyang yinxiang Nonferrous Smelting Co., Ltd.	China
CID000778	HwaSeong CJ CO., LTD.	Korea, Republic of
CID000927	JSC Ekaterinburg Non-Ferrous Metal Processing Plant	Russian Federation
CID000956	Kazakhmys Smelting LLC	Kazakhstan
CID001032	L'azurde Company For Jewelry	Saudi Arabia
CID001056	Lingbao Gold Co., Ltd.	China
CID001058	Lingbao Jinyuan Tonghui Refinery Co., Ltd.	China
CID001093	Luoyang Zijin Yinhuai Gold Refinery Co., Ltd.	China
CID001236	Navoi Mining and Metallurgical Combinat	Uzbekistan
CID001362	Penglai Penggang Gold Industry Co., Ltd.	China
CID001546	Sabin Metal Corp.	USA
CID001562	Samwon Metals Corp.	Korea, Republic of
CID001619	Shandong Tiancheng Biological Gold Industrial Co., Ltd.	China
CID001909	Great Wall Precious Metals Co., Ltd. of CBPM	China
CID001947	Tongling Nonferrous Metals Group Co., Ltd.	China

Smelter ID	Standard smelter name	Country location
CID002282	Morris and Watson	New Zealand
CID002312	Guangdong Jinding Gold Limited	China
CID002515	Fidelity Printers and Refiners Ltd.	Zimbabwe
CID002525	Shandong Humon Smelting Co., Ltd.	China
CID002562	International Precious Metal Refiners	United Arab Emirates
CID002563	Kaloti Precious Metals	United Arab Emirates
CID002567	Sudan Gold Refinery	Sudan
CID002584	Fujairah Gold FZC	United Arab Emirates
CID002587	Tony Goetz NV	Belgium
CID002615	TOO Tau-Ken-Altyn	Kazakhstan
CID002708	Abington Reldan Metals, LLC	USA
CID002852	GCC Gujrat Gold Centre Pvt. Ltd.	India
CID002853	Sai Refinery	India
CID002857	Modeltech Sdn Bhd	Malaysia
CID002865	Kyshtym Copper-Electrolytic Plant ZAO	Russian Federation
CID002867	Degussa Sonne / Mond Goldhandel GmbH	Germany
CID002872	Pease & Curren	USA
CID003153	State Research Institute Center for Physical Sciences and Technology	Lithuania
CID003185	African Gold Refinery	Uganda
CID003189	NH Recytech Company	Korea, Republic of
CID003324	QG Refining, LLC	USA
CID003348	Dijllah Gold Refinery FZC	United Arab Emirates
CID003382	CGR Metalloys Pvt Ltd.	India
CID003383	Sovereign Metals	India

Non-conformant: Tin

Smelter ID	Standard smelter name	Country location
CID000448	Estanho de Rondonia S.A.	Brazil
CID002572	Electro-Mechanical Facility of the Cao Bang Minerals & Metallurgy Joint Stock Company	Vietnam
CID002573	Nghe Tinh Non-Ferrous Metals Joint Stock Company	Vietnam
CID002574	Tuyen Quang Non-Ferrous Metals Joint Stock Company	Vietnam
CID002703	An Vinh Joint Stock Mineral Processing Company	Vietnam
CID002756	Super Ligas	Brazil
CID002858	Modeltech Sdn Bhd	Malaysia
CID003208	Pongpipat Company Limited	Myanmar
CID003356	Dongguan CiEXPO Environmental Engineering Co., Ltd.	China

Non-conformant: Tungsten

Smelter ID	Standard smelter name	Country location
CID000281	CNMC (Guangxi) PGMA Co., Ltd.	China
CID002313	Jiangxi Minmetals Gao'an Non-ferrous Metals Co., Ltd.	China

Country of origin information by mineral

The following 81 countries of origin were identified based on the Smelters reported in suppliers' CMRT responses for the year ended 31 December 2019 and the RMI 2018 mineral mine production by country report published in March 2019, compared against the Reasonable Country of Origin Inquiry Data we received through our membership of the RMI as of 4 March 2020.
