

# Connect Devices Anywhere — Keep it Under Control with Global SIM

## Streamline data connectivity and centralize management

**Global SIM powers IoT connectivity worldwide** with eSIM and physical SIM support, paired with a global provisioning Platform as a Service (PaaS) solution to manage all devices. Gain full visibility into data usage, enforce policies for secure access, and optimize roaming spend. Scale effortlessly across networks and countries while keeping operations simple, secure, and cost-effective.

### Stay connected everywhere

- Global reach with access to over 600+ mobile networks in 190+ countries and territories.
- Centralized operations to a branded platform. Enable subscribers to move across networks effortlessly.
- Dependable global coverage with uninterrupted connectivity worldwide, with 99.9% availability.

### Manage access and experience

- Ensure consistent experience across deployments with robust policy control.
- Tailor policies to every scenario.
- Match access to user needs by defining data availability, speeds, and usage rules for each device or subscriber group.

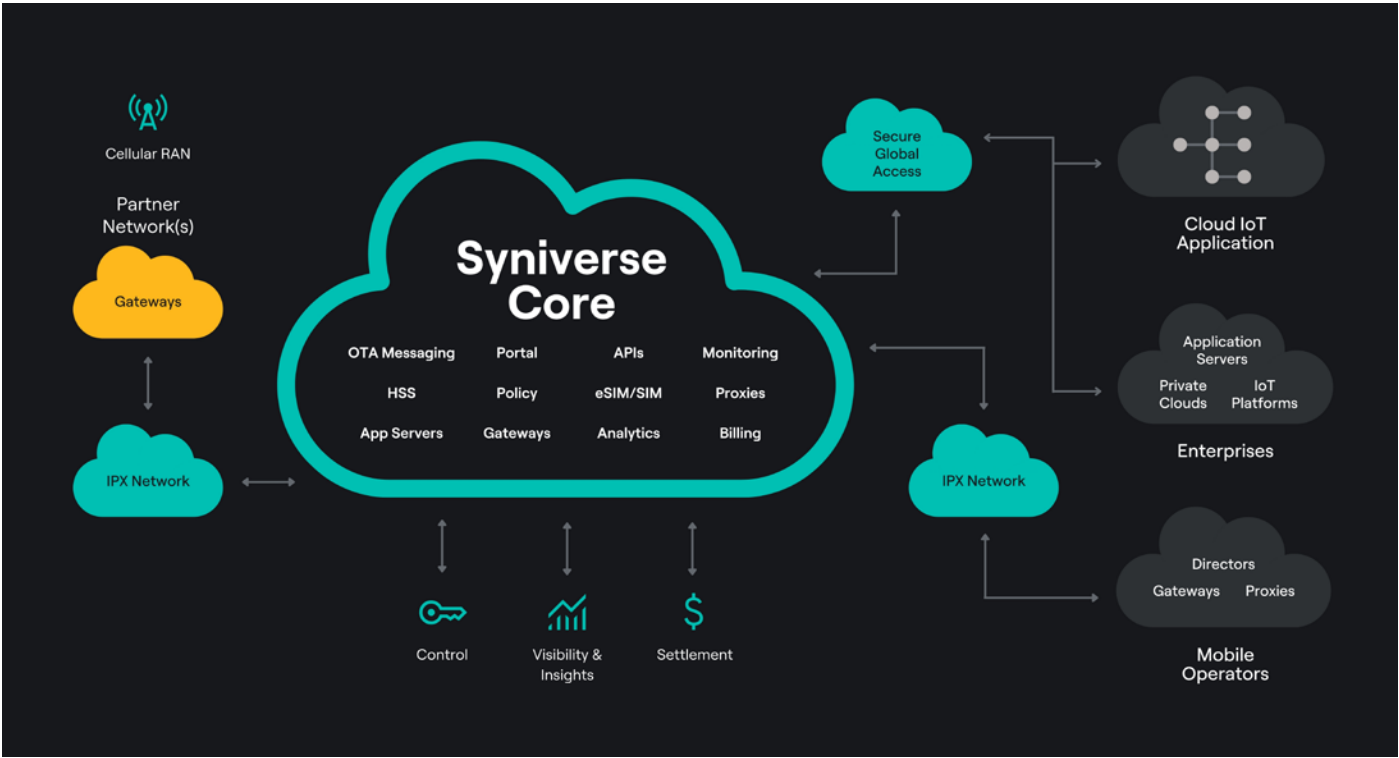

### Visibility and control

- Simplified device management with provisioning, configuration, and monitoring from a single platform.
- Real-time detailed reporting on device activity, status, and network events.
- Integrate via portal or REST API to align with existing systems and workflows.

**Global SIM** empowers users to seamlessly connect IoT machines and devices, no matter where they go, across both local and international mobile networks — all through one relationship and a single platform.

**Syniverse Global SIM** is backed by 35+ years of proven service reliability, 99.9% uptime, and deep expertise in global connectivity solutions.

- Streamline device identity management and authentication through SIM card technology.
- Have complete visibility and control over your data and policies.
- Easily integrate into existing services and infrastructure through a dedicated connection.
