

MSC VMI Service

TAKE CONTROL OF YOUR CONSUMABLE PARTS

Consumable parts are the low-cost items, such as fasteners, fittings and connectors, that may not cost much individually but can cost you plenty if you don't have them to keep operations up and running.

We analyze your operations and develop individual inventory management systems that keep your business running and competitive.

MSC can help you:

- Consolidate suppliers and reduce purchase orders
- Manage small parts programs with a highly skilled and experienced support team
- Optimize min./max. levels to keep inventory up to date and right where you need it, when you need it

MSC VMI makes maintenance consumable inventory visible, measurable and manageable.

VMI helps reduce downtime, eliminate excess stock and streamline procurement.

Achieve more accurate inventory levels and reduce overhead cost by only having products on hand when you need them. MSC's inventory specialists will develop individual inventory management systems that keep your business running while you stay in control of all purchasing decisions.

Service Offerings:

- **Onsite Assessment:** Product cross-reference, item plan design and min./max. level setup
- **Product Organization:** Includes labels, signage and storage fixtures (as needed)
- **Inventory Replenishment:** Scheduled visits by MSC to monitor, order and put away items
- **Streamlined Procurement:** Flexible purchase methods and order approval options

MSC's VMI services help you optimize your inventory, so you can focus on what matters most: keeping production running smoothly.
