

Orlando International Airport

Safety Management System

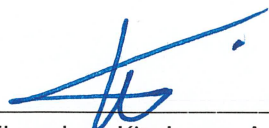

Safety Policy Statement

The Greater Orlando Aviation Authority (GOAA) is committed to the implementation of a Safety Management System (SMS) that creates and maintains an environment of optimal operational safety for employees, business partners, and passengers of Orlando International Airport (MCO).

GOAA will actively promote participation in the SMS, identify hazards, and promote a proactive safety program to minimize and mitigate risks. Maintaining a high standard for safety is everyone's responsibility. The Aviation Authority is dedicated to embracing an SMS that facilitates ongoing continuous safety improvement through:

- A convenient hazard/safety reporting system
- Ongoing hazard identification and safety inspections
- Thorough hazard investigations and evaluations
- Prompt, transparent communications of reported hazard resolution/disposition
- Continuous promotion and encouragement of a vigorous safety culture

The goals and objectives of our SMS have broad support throughout the organization, including senior management. Personnel and resources are specifically dedicated to the system's implementation and operation. Training opportunities and safety information will be readily accessible. Policies and procedures will conform to applicable local, state, and federal requirements as well as ensure privacy protections for anonymous reporting. Safety is fundamental to our continued success and essential for innovations that will maintain our position as a leader in global connectivity.

Theodore Kitchens, A.A.E.
Chief Operating Officer
Greater Orlando Aviation Authority
