

NOVEMBER 2022

## Soft Plastic Packaging – REDcycle update

At the Arnott's Group we're committed to our role in creating a circular packaging economy.

Our team is hard at work identifying innovative, alternative materials and redesigning, and reformulating our packaging so it's 100 per cent recyclable, reusable or compostable by 2025.

### Soft plastics recycling

In New Zealand we partner with TerraCycle which runs an in-store collection program.

In Australia we are a partner of the REDCycle in-store collection program which due to unforeseen challenges has been paused. You can find more information at [www.redcycle.net.au](http://www.redcycle.net.au)

### What does this mean?

Many of our products have packaging that displays the REDcycle logo and the Australasian Recycling Label (ARL) showing 'Return to Store' for the soft plastic components. Those soft plastic components cannot currently be recycled through the REDcycle program.

We apologise for any confusion and advise that for the time being, you visit [Recycling near you](#) website for information to help you find other recycling options in your local area, or you place your soft plastics in the rubbish bin.

In New Zealand, you can still return your soft plastics to the collection bins available at participating stores.

### The Future

The Arnott's Group is actively supporting the creation of critical waste management systems and is a Foundation member of the Australian Food and Grocery Council's Soft Plastic Kerbside Recycling Trial.
