

Haptic Module for Teenage Engineering OP-Z

Now you can feel the beat - introducing Rumble.

Teenage Engineering is launching a new module for the OP-Z. Rumble is a soundless haptic subwoofer for the portable synth and sequencer OP-Z. Made in close collaboration with Berlin deep tech company, Lofelt, it features a silent metronome mode and unique audio-to-haptic technology that recreates natural bass sensations to the body.

Rumble is the second accessory released for the OP-Z and uses high-definition vibrotactile feedback and psychoacoustic technology to trick the human brain into feeling like the user is standing next to a deep-sounding subwoofer. In short, you will feel the beat.

The all-new Rumble costs 89 USD and is available for worldwide shipping in the Teenage Engineering online store starting today.

About Lofelt

Lofelt is pioneering the new wave in natural haptics for the most remarkable tactile experience on the market. Their technology delivers high-definition, realtime and true wideband response –for immersive audio like you’ve never felt before.

They are collaborating with some of the top brands in the world, to bring high-definition haptics to music, gaming, mobile and beyond. Lofelt was founded in 2014. In 2016, they launched the Basslet – a silent wearable subwoofer that delivers bass straight to the body.
