Gas springs

Gas spring Liftline (standard program)

Liftline is an excellent gas spring program offered by SUSPA. Successfully proven in the market for decades and always state-of-the art through constant innovation.

The SUSPA Liftline program includes five basic types: the types 16-12, 16-1, 16-2, 16-4 and 16-6.

The main differences are in the tube and piston rod diameters and the different extension forces. This way, we can meet your specific technical requirements with the optimal gas spring type.

Type	Ø Tube (mm)	Ø Piston rod (mm)	Stroke max. (mm)	Extension force F_1 (N)
16-12*	12	4	150	40 - 180
16-1*	15	6	150	50 - 420
16-2*	18.5	8	250	80 - 750
16-3	22	8	495	100 - 1,200
16-4*	22	10	495	100 - 1,200
16-6*	28	14	500	200 - 2,000

* Standard program, pages 9-13

Applications

Tailgate

Steering columns

Kitchen cabinet

Machinery lids

Gas spring Liftline

Design and functionality

How force and effective cushioning are produced

Gas springs are hydropneumatic adjustment elements. They consist of a pressure tube plus piston rod with piston unit. Connecting elements on the pressure tube and the piston rod allow appropriate connection to your application.

At the core of the SUSPA gas spring is the special seal and guide system. This ensures hermetic sealing of the cavity with low friction, even under extreme environmental conditions.

The gas spring is filled with non-toxic nitrogen at high pressures. This produces a charging pressure that in turn exerts an effect on the cross section of the piston rod, generating the extension force. If the extension force of the gas spring is greater than the force of the counterbalance, the piston rod extends; if the extension force is smaller, it retracts. The speed of the extension is determined by the flow cross section in the damping system.

In addition to nitrogen, the cavity contains a defined quantity of oil for lubrication and end position cushioning. The cushioning effect of a gas spring can be determined depending on the requirements and the task involved.

Spring characteristic

As seen in the graphic, the spring characteristic curve shows the force path of the gas spring over the stroke, from the extended to the retracted state and back. The spring characteristic illustrates the balance of power of F_2/F_1 . For the design of gas springs, the force F_1 is, in addition to the dimensions, the most important criterion.

Gas spring Liftline Type 16-12 (standard program)

Ø tube 12 mm, Ø piston rod 4 mm, max. stroke 150 mm, extension force 40-180 N

Type 16-12 Thread/Thread

Select length, stroke and extension force

Length L (mm) ±2	Stroke (mm)	Technical data	Extension force F_1
72	20	16-12 - 49 - 23 - AM4 - BM4 -	Select the desired extension force F_1: $40\text{ N} \leq F_1 \leq 180\text{ N}$ * The maximum F_1 extension force depends on the customer's application. Please contact us for your individual layout.
92	30	16-12 - 59 - 33 - AM4 - BM4 -	
112	40	16-12 - 69 - 43 - AM4 - BM4 -	
132	50	16-12 - 79 - 53 - AM4 - BM4 -	
152	60	16-12 - 89 - 63 - AM4 - BM4 -	
192	80	16-12 - 109 - 83 - AM4 - BM4 -	
232	100	16-12 - 129 - 103 - AM4 - BM4 -	
272 *	120	16-12 - 149 - 123 - AM4 - BM4 -	
332 *	150	16-12 - 179 - 153 - AM4 - BM4 -	

i Order example: **16-12 - 179 - 153 - A446 - B446 - 120N**

Type Tube (A) Piston rod (B) Tube (A) Piston rod (B) Extension force F_1

Length (mm) Fitting

i Please select your fittings on page 14

Damping behaviour

Type 16-12 can be used without extension force as a damper. The damping behavior can be chosen according to your needs. The characteristic curve shows the damping force depending on the extension speed.

Gas spring Liftline Typ 16-1 (standard program)

Ø tube 15 mm, Ø piston rod 6 mm, max. stroke 150 mm, extension force 50-420 N

Typ 16-1 Thread/Thread

Select length, stroke and extension force

Length L (mm) ± 2	Stroke (mm)	Technical data	Extension force F_1
77.5	20	16-1 - 53.5 - 24 - AM6 - BM6 -	Select the desired extension force F_1 : $50 \text{ N} \leq F_1 \leq 420 \text{ N}$
107	35	16-1 - 67 - 40 - AM6 - BM6 -	
117.5	40	16-1 - 72.5 - 45 - AM6 - BM6 -	
156.5	60	16-1 - 91 - 66.5 - AM6 - BM6 -	
197	80	16-1 - 113 - 84 - AM6 - BM6 -	
207	85	16-1 - 117 - 90 - AM6 - BM6 -	
235	100	16-1 - 131 - 104 - AM6 - BM6 -	
278	120	16-1 - 154 - 124 - AM6 - BM6 -	
285	120	16-1 - 161 - 124 - AM6 - BM6 -	
316	135	16-1 - 168 - 148 - AM6 - BM6 -	
337.5	150	16-1 - 183.5 - 154 - AM6 - BM6 -	

Type 16-1 can be used as a damper without extension force.
Please contact us for your individual layout.

Liftline Special functions

Standard gas spring or Soft-Stop gas spring

for example for furniture flaps

Standard gas springs as well as Soft-Stop gas springs are dampened on extension. After opening the flap slightly (as little as 10 degrees) both gas spring types will automatically lift the flap to the fully open position of approximately 90 degrees unassisted. In order to minimize vibrations, the speed is controlled over the entire range of opening by using a special hydraulic dampening (extension dampening) thus enabling a smooth opening. By presetting the filling pressure, it is possible to optimize the gas spring to any installation situation.

Advantages

- Extension speed is defined
- Automatic and noiseless opening function
- Smoothly cushioned movement throughout the entire opening procedure
- Gently slowing down the door/lid as it reaches full extension

Positioning gas spring (Friction gas spring)

for example for furniture flaps

If a furniture flap needs to be used in many different positions, the positioning gas spring may be the right solution. This gas spring supports the load in any position desired by the user. Doors/lids can be positioned infinitely throughout their complete range of motion. By careful adjustment of the pressure during filling, the gas spring can be optimized to the application.

Advantages

- Counterbalance for loads during the opening function
- The ability to hold or position the door infinitely at any position in its range of motion

Gas spring with protective cap

If the gas spring is used in a particularly dirty or dusty environment, it may be necessary to protect the seal by using protective caps made of rubber or plastic. The protective cap is intended to ensure that no dirt and dust particles in the environment penetrate into the pneumatic spring seal when actuating the flap. Using the protective cap therefore also has a positive effect on the service life of the gas spring in these installation situations.

In an extremely dirty environment, the protection that is guaranteed by the protective cap may not be sufficient. In these extreme environmental conditions, it is advisable to use a Space-Mat gas spring (gas spring with lubrication reservoir).

Space-mat: gas spring with lubrication reservoir

The gas spring with lubrication reservoir is based on the space-mat principle. This principle means that a plastic foam placed around the piston rod absorbs lubricants into the cavities by capillary action and releases them again purposefully when lubrication is required. The service life of the gas spring is markedly improved as a result, especially if used in technically demanding surroundings (dirt and dust).

Advantages

- Suitable for technically demanding surroundings (dirt and dust)
- Suitable for special installation situations (e.g. piston rod upside)

TouchLift: gas spring that locks in the retracted position

The SUSPA TouchLift is a gas spring that locks itself in the retracted position. In this way, for example, covers can be kept in the lowered position. Slight pressure on the cover releases the lock and the gas spring extends.

The lock works according to the so-called ballpoint pen principle:

- Press once and the gas spring locks in place
- Press once more and the gas spring extends

Applications

By using the SUSPA TouchLift gas spring, furniture elements can be retracted so that their lid cover is flush with the respective surface. The objects can be raised and retracted simply by pressing the cover.

- Retracting flat screens
- Retracting outlet strips
- A minibar to be retracted
- Lifting and lowering functions for head rests or arm rests of sofas

Advantages

The main advantages of the SUSPA TouchLift is the very low noise and the 7mm travel of release. The TouchLift gas spring works without electricity, therefore, no cables or batteries are required and no electricity costs are incurred. Its service life corresponds with that of a classic gas spring, i. e. approximately 50,000 cycles.

Lockable gas spring Lockline

The locking gas strut aids the ergonomics and comfort for conveniently safely changing seated and lying positions, for effortlessly and precisely operating machine covers and are used in many other applications.

Our lockable gas struts make it possible to variably lock them in any stroke position, whether elastically ("spring-loaded") or rigidly. Our special functions offer particular advantages when it comes to convenience and operation.

Different connection elements and release systems complete our range of products and give you the appropriate lockable gas strut for any application.

Elastic locking

Type	Ø Tube (mm)	Stroke (mm)	Extension force F_1 (N)	Type of locking
EL1*	22	10 - 450	80 - 800	elastic
EL2*	28	10 - 450	80 - 1,000	elastic

Rigid locking

HY1*	22	100 - 300	80 - 800	rigid in the tensile direction
HY3*	28	10 - 450	80 - 1,000	rigid in the tensile direction

Lockable gas spring Lockline

Design and functionality

Working principle

Gas springs consist of a gas pressurized tube together with a piston rod and piston. The piston is fitted with a valve that is actuated by the release pin. When the valve is shut, the gas spring does not move, thus providing locking in the desired position.

Depending on the pressure medium, this locking feature can be either **rigid** or **elastic**.

Type of locking

Rigid locking in extension (HY1 and HY3) is used when a cushioning effect in the locking position is not desired – for example, for safety reasons. Rigid locking in compression (HY4, HY6 and VOB18-1) is recommended for light weight applications that are subject to high compression forces when locked and require no movement. The VOB18-1 and HY6 are ideal for applications that require a short installation length and a large stroke (Please find detailed information in our product catalog „Lockable gas springs“).

Elastic-locking gas springs EL1 and EL2 are recommended when the locking feature is required to have a cushioning effect. Sudden jolted loads can thus be dampened or even completely avoided.

Spring characteristic

As the graphic illustration indicates, the spring characteristic curve represents the force curve of the gas spring over the stroke, from the extended to the compressed state. The progression thereby represents the force ratio F_2/F_1 in extension direction. To be able to design a gas spring, force F_1 apart from the dimensions, is an important measuring criterion. Force F_1 is measured 2 mm from the end of the extension movement and defines the value of the spring force. Force F_R , resulting from friction, develops between the force lines in the direction of retraction and extension. The extension speed can be defined by adjusting the piston assembly corresponding to available stages.

Standard program – technical specifications

Elastic locking

Specification	EL1	EL2
Release pin	on piston rod side	
Locking	elastic	
In compression direction: max. load [N]	6,500	10,000
In extension direction: max. load [N]	3,500	7,000
Tube diameter [mm]	22	28
Piston rod diameter [mm]	10	
Stroke C [mm]	20 - 250	20 - 250
Extension forces F_1 [N]	200 - 800	200 - 1,000
Progression ratio (F_2/F_1)	~1.30	~1.20
Release force [N]	$0.25 \times F_1$	
Release travel, normal [mm]	$2.5 \leq x \leq 3.5$	
Recommended installation position	piston rod pointing downwards	
Permissible operating temperature	-20 °C to +60 °C	
Permissible storage temperature	-20 °C to +80 °C	

Rigid locking

Specification	HY1	HY3
Release pin	on piston rod side	
Locking	rigid in tensile direction	
In compression direction: rigid until [N]/max. load [N]	$3.6 \times F_1/6,500$	$5.8 \times F_1/10,000$
In extension direction: max. load [N]	3,500	7,000
Tube diameter [mm]	22	28
Piston rod diameter [mm]	10	
Stroke C [mm]	20 - 250	20 - 250
Extension forces F_1 [N]	200 - 800	200 - 1,000
Progression ratio (F_2/F_1)	~1.60	~1.40
Release force [N]	$0.25 \times F_1$	
Release travel, normal [mm]	$2.5 \leq x \leq 3.5$	
Recommended installation position	any	any
Permissible operating temperature	-20 °C to +60 °C	
Permissible storage temperature	-20 °C to +80 °C

Lockline Special functions

AntiShock AS

Convenience and safety

The "AntiShock" module detects the load situation of the application and acts accordingly. When used in an office chair with dynamic free-swinging, the lockable gas spring with AntiShock provides the user with smooth moving action (comfort function). In addition, it will return the non-loaded backrest slowly from the reclined to the vertical position when released. Thus it will avoid the so-called catapult effect (safety function).

In the case of height-adjustable tables which have a low intrinsic weight but are subjected to high loads when in use (Varilock with a high extension force), the Varilock allows a quick height adjustment of the loaded table and, thanks to AntiShock, also prevents the tabletop rising up too quickly when the empty, unloaded table is released.

EasySwitch ES

Locking that can be switched on and off

With the "EasySwitch" module, the user controls the valve "digitally", alternating between the closed and permanently open position and back again. You switch between the two modes by activating the pin through the release mechanism.

With EasySwitch, the valve stays either open (swinging function) or closed (locked backrest) as per the user's settings.

OverRide OR

Smooth extension without actuation

The "OverRide" module allows a person to move the application in the extension direction without having to activate the release function. In the case of desk or table applications, a gentle upwards force applied to the tabletop adjusts the height of the table. Once the desired position has been achieved, locking in the compression direction is rigid.

OverRide provides smooth, comfortable operation and was first designed for use in hospital beds and over-bed tables. It also allows for single-hand operation of the application.

TimeReset TR

Automatic return

The "TimeReset" automatically detects whether the application is charged with a person's weight or not. When loaded, the Varilock operates in the usual manner and permits locking at any position. When the application is not loaded, the Varilock returns it to the starting position (vertical backrest) within a custom defined time period.

TimeReset is particularly suitable for passenger seats, cinema and theatre seating or conference chairs.

ComfortReleaseLow CL

Extremely easy operation of gas struts

Using the "ComfortReleaseLow" module can adjust the lockable gas strut to the requirements of any release system in order to achieve maximum operating comfort. Conventional valve designs (standard release) cannot be conveniently triggered in the event of high extension forces. SUSPA ensures a convenient release through the lowest possible manual force on the actuating element (button, lever). We are happy to advise you in the optimization of your application.

Lightweight lockable gas strut

Lockable gas struts for aviation are ideal for the comfortable and safe adjustment of the sitting and lying position of passenger and pilot seats.

Characteristics

- Optimized weight due to the aluminum piston rod (60% weight savings compared to a conventional piston rod made of steel with the same performance)
- High strength of the tube even with a smaller wall thickness (25% compared to conventional tubes)
- Low release force
- High spring stiffness

Application examples

- Backrest adjustment in passenger and pilot seats
- Leg rest for business and first class seats

Damper Softline

The SUSPA hydraulic dampers, also called shock absorbers, industrial shock absorbers or vibration dampers, are designed for the respective product application so that an optimal movement sequence or optimal vibration behavior is achieved. We use our decades of experience in the field of damping technology to solve your individual requirements for damping vibrations and impacts.

Damper Softline

Design and functionality

When the piston rod is moved, the damping medium of oil is pressed through the bores in the piston system. The damping force results from the resistance of the oil when flowing through the piston system. Due to the internal design of the piston system, the pull and push direction can be set independently of each other. The damping forces are dependent on the piston speed.

When the piston rod is moved, the damping medium of oil is pressed through the bores in the piston system. The damping forces are dependent on the piston speed.

Damping forces

Because the damping holes can be closed respectively to either side by way of valve washers, it is possible to regulate the damping forces in extension and compression directions largely independent of one another. The damping force upon compression determines the hardness of a shock absorber upon retraction. The damping force upon extension regulates the extension speed.

Characteristic curve

Adjustable linear, progressive or degressive characteristic curves allow for the application-oriented design of the hydraulic damper.

Damper Softline Variations

Standard

The classical standard damper with throttling port and valve system for diverse applications. A vacant space remains in the pressure tube for the volume of the piston rod. A slight idle stroke results, meaning that damping force only occurs after several millimeters of path.

Characteristics

- Without extension force F_1
- With idle stroke
- Fixed position

Application examples

Waste container, counter, medical, furniture, automotive interior, overhead compartments

Damper with gas pressure

The vacant space is filled with gas in this version. This damper is therefore usable independent of installation position.

Characteristics

- With extension force F_1
- Without idle stroke
- Independent position

Application examples

Automobile trunks, glove compartments, various flaps

Damper with gas pressure and separator piston

In this version, the oil chamber is separated from the gas compartment, which is under pressure, by a sealing separator piston. The damper can therefore be installed in any position desired and possesses no idle stroke. This has as a consequence that the damping force immediately sets in upon load condition.

Characteristics

- With extension force F_1
- Without idle stroke
- Independent position

Application examples

Waste container, overrun brakes, automotive interior, commercial vehicle seats

Damper Softline Versions

Damper with bottom valve

The oil chamber is separated from the gas compartment by way of a bottom valve in this type of damper. For specific applications: Idle stroke freedom is achieved without extension force.

Characteristics

- Without extension force F_1
- Without idle stroke
- Fixed position

Application examples

Counter, automotive interior, motor vibration damper, belt tensioners, commercial vehicle seats

Damper with bottom valve and diaphragm

The diaphragm in the balance chamber, behind the bottom valve, expands upon load (compression) and contracts upon extension. For specific applications: Idle stroke freedom without extension force is achieved for independent choice of installation position.

Characteristics

- Without extension force F_1
- Without idle stroke
- Independent position

Application examples

Overrun brakes, commercial vehicle seats, belt tensioners

Twin-Tube

Two tubes with unlike diameters are arranged concentrically. The inner tube represents the working area. The space between the inner and outer tubes is the balance chamber that takes up the oil pressed out by the retracting piston rod.

Especially worthy of mention are the freely adjustable forces possible in the extension and compression directions. In addition, the extremely light weight of the damper which is achieved by the use of an aluminum outer tube.

Characteristics

- Diameter outer tube 38 mm (aluminum tube)
- Diameter piston rod 10 mm
- Damping force max. 6,000 N
- Without extension force F_1
- Fixed position (installation with piston rod pointing upward)

Application examples

Commercial vehicle seats (vertical damping)

Damper for aviation

The lightweight damper is in particular used in stowage compartments and guarantees a gentle downward-opening. The optimized weight is achieved with this damper due to the small design.

Characteristics

- Wide range of the damping force
- Optional manual force support
- Elegant due to the compact design

Application example

Overhead compartments

Piston rods and Tubes

Rotary and translatory moving piston rods, shafts and tubes meet the highest quality standards due to our decades-long expertise. The precisely coordinated production steps of turning, hardening, grinding, surface coating and polishing ensure a high surface quality. Even complex geometries can be manufactured with high accuracy on CNC machines with several axis - economical and established in millions of applications.

	Characteristics
Ø Piston rod	4 mm - 28 mm
Ø Tube	4 mm - 70 mm
Length	35 mm - 700 mm
Roughness	Ra 0.05 µm/Rz 0.5 µm
Material	steel, stainless steel, aluminum
Surface refinement	hard chrome plating, salt bath or gas nitration, DLC, browning, galvanizing, passivating

Applications

Vibration damper

Convertible

Piston rods and tubes

Production Expertise

CNC Turning

With the latest multi-axis CNC turning machines, we offer you conventional cam-controlled, simple turning as well as the economical complete machining of turned parts in one clamping.

Hardening

Inductive through-hardening ensures the hardening of predetermined zones in the component. It is a technology that can be customized to your needs.

Centerless through-feed grinding

SUSPA grinding lines ensure high throughput speeds and optimal economic efficiency. You can expect an optimal surface quality with roughness values up to Ra 0,1 µm, depending on the material and diameter requirement.

Surfaces

Hard chrome plating, salt bath nitriding, gas nitriding, DLC, black finishing, zinc plating, passivation achieve high corrosion resistance and wear resistance. This means extremely large load changes over the entire service life for your products.

Polishing

The prerequisite of a tribological system is a flawless surface, which we achieve through a final optimized finishing, without a significant removal of material.

Flexibility

A provision of our components adapted to your logistics requirements in the batch sizes you need is a matter of course.

Height Adjustment

Height adjustment Office

Ergonomics in the workplace

Over the last few years, SUSPA has become established as one of the leading suppliers of electric height adjustment systems. The topic of ergonomics in the workplace has increasingly gained importance in companies in recent years.

Since more and more people are experiencing back problems due to a lack of movement, it is not only the personal well being that is affected, but there is also enormous economic damage done through absences from work.

The best way of countering the lack of movement in the office is to use sit-stand desks.

Type	Characteristics
Electric columns ELS3	• elegant design, many colors and profiles • adjustment range to 650 mm • fast and quiet movement
Table base frame VariFrame	• split and variable crossbeam (for different table top sizes)
Table base frame FixFrame	• fixed cross beam • in five sizes
Table base frame ELS3 Bench	• for duo workplaces • for table base frame VariFrame or FixFrame
Table base frame accessories	• controllers • switches
Pneumatic table column VariStand	• 1-leg table • table column round
Pneumatic table column Vari-Base	• 1-leg table • table column square

FixFrame

Electric adjustable table base frame Office

The table base FixFrame consists of a fixed cross beam, available in five different sizes. We offer control boxes and switches for the VariFrame as well as for the FixFrame (see pages 48 und 49).

Model name		Table base frame FixFrame
Top frame		
Color		☐ silver-gray RAL9006 ☐ white RAL9003 ☐ black RAL9005 ☐ graphite RAL7024
Traverse	length	fixed cross beam lengths: 1,140 mm, 1,340 mm, 1,540 mm, 1,740 mm, 1,940 mm
Desk top dimensions	length depth	1,200 mm, 1,400 mm, 1,600 mm, 1,800 mm, 2,000 mm 700 - 800 mm
Material		steel profile
Fixing plate	length	545 mm
Adjustment range (stroke) until top of frame		ELS3-500S: 680 - 1,180 mm ELS3-650: 600 - 1,250 mm
Maximum load table frame		100 kg
Adjustment speed		ELS3-500S: 35 mm/s ELS3-650: 38 mm/s
Accessories		screws, adjustable feet
For lifting columns		can be combined with all SUSPA columns

Foot base

Type		FA2
For lifting columns		can be combined with all SUSPA columns
Dimensions	length	750 mm
	depth	90 mm
	height	30 mm

ELS3 Bench

Electric adjustable table base frame Office for duo workplaces

For team workplaces we offer a complete table base frame, suitable for table tops from 1,200mm to 2,000mm. With the so called bench-solution you will achieve the ideal use of space in your office.

Model name		Table base frame Bench
Top frame		
Color		● silver-gray RAL 9006 ○ white RAL 9003
Cross beam	length	see VariFrame or FixFrame, pages 46 und 47
Desk top dimension	length depth	1,200 mm, 1,400 mm, 1,600 mm, 1,800 mm, 2,000 mm 700 - 800 mm
Material		steel profile
Fixing plate	length	545 mm
Accessories		screws, adjustable sliding feet

Accessories and switches

Control boxes

The highly efficient control boxes have a flat and compact design. In combination with the switches they guarantee a reliable and economical operation of the tables.

SMART controller

- Low standby power consumption: $\leq 0,3$ W
- Soft-Start and Soft-Stop
- Overload protection
- Small size and flat design
- Weight: 305 g
- Dimensions: 186x100x30 mm
- Input voltage: 230 V/50 Hz
- Output voltage: 216 VA (2-leg) 24 VDC
- Operating time 10 % at maximum load (1 min/9 min)
- Controls for EU- and US-voltage available

COMPACT controller

- Low standby power consumption: $\leq 0,3$ W
- Soft-Start and Soft-Stop
- Overload protection
- Weight: 418 g/523 g (3-leg-controller)
- Dimensions: 264x103x37 mm
- Input voltage: 230 V/50 Hz
- Output voltage: 288 VA (2-leg) 24 VDC / 360 VA (3-leg) 24 V DC
- Operating time 10 % at maximum load (1 min/9 min)
- Controls for EU- and US-voltage available
- External sensor collision detector possible with LOGIC-CONNECTOR

Communication and Connectivity LOGIClink

LOGIClink provides connectivity and control, allowing for communication and customization of the user's work environment.

Power cable

available for the control boxes COMPACT and SMART for different countries

Switches

We provide solutions for an installation below the table and within the table top. From a simple hand switch with Up/Down function to a comfort switch with four memory functions and display – all operational elements satisfy through their surface design and the pleasing haptics.

VariBase

Height-adjustable table column (square column)

The pneumatic height adjustable system VariBase is a professional and extremely robust holistic solution for table applications. It is particularly characterized by ease of handling and Plug & Play installation. VariBase stands out for its application with a long service life and offers comfortable height adjustment.

VariBase is available in versions Big Tube Up (BTU) or Big Tube Down (BTD).

Characteristics	Values		
Dimension BTU (Big Tube Up)	□ 70 / □ 65 mm		
Dimension BTD (Big Tube Down)	□ 60 / □ 65 mm		
Length when extended (L_{out})	1,040 mm	815 mm	655 mm
Stroke	400 mm	290 mm	215 mm
Length when compressed (L_{in})	640 mm	525 mm	440 mm
Stroke force	120 N, recommended weight of table top ~ 6 kg, further F_1 -force on request (70 - 400 N)		
Surface finishing	Powder coated (RAL9006), further RAL-colors on request		
Activation / release	Lever, cable release		
Tabletop fitting	lange adapter (with 12 drillholes, distance 32 mm)		
Base fitting	Flange with 4 x M6		
Non-rotation function	Standard		

Big Tube Up (BTU)

All dimensions in mm.

Features

- Elegant design with square tubes
- Available in versions BTU - Big Tube Up and BTD - Big Tube Down
- Robust guide system
- Available in two versions of gas springs (rigid and elastic locking)
- Non-rotational column
- Quick and easy to adjust
- Plug & Play assembly

Applications

- Side table
- Speaker's desk
- Trolleys, carts
- Overbed tables

VariStand

Height-adjustable table column (round column)

The VariStand table column is a professional, sophisticated, design-orientated solution for all table and cart applications. It is characterized by its ease of use and plug & play assembly.

VariStand offers high-quality and comfortable height adjustment.

Characteristics	Values			
Order number	13652065	13652067	13652064	13652066
Dimension BTU (Big Tube Up)	Ø 75 mm / Ø 70 mm			
Length when extended (L_{out})	1,040 mm	660 mm	1,040 mm	660 mm
Stroke	415 mm	225 mm	415 mm	225 mm
Length when compressed (L_{in})	625 mm	435 mm	625 mm	435 mm
Stroke force	From 70 N up to 400 N, according to weight of tabletop or application			
Surface finishing	Chromium-plated, powder coated (RAL 9006), further RAL colors on request			
Activation / release	Lever, cable-release			
Tabletop fitting	Flange adapter (with 12 drillholes, distance 32 mm)			
Base fitting	Flange or cone with 3 x M6			
Non-rotation function	Standard			

Big Tube Up (BTU)

All dimensions in mm.

Features

- Elegant design with round tubes
- Precise and silent guide system
- Rigid and elastic locking in any position
- Constant remaining adjustment force in any position
- Optimal anti-twist protection
- Large adjustment range with small installation length
- Quick and easy adjustability
- Easy installation due to plug & play
- Override function: lifting without release actuation (optional)
- The lockable gas struts HY6 or EL2 are installed in the guide tube

Applications

- Side table
- Speaker's desk
- Trolleys, carts
- Overbed tables

Height Adjustment Industry

Ergonomics at the workplace

Adjust industrial facilities, workbenches, conveyor belts and all types of industrial worktables flexibly to the requirements of your employees and production - and not vice versa. SUSPA height adjustments support you efficiently and individually.

Type	Characteristics	Drive
Movotec SMS Bolt-On	• As an upgrade system for existing workplaces • Load performance 150kg/lift element • Adjustable range up to 400 mm	electric
Assembly profile Movotec SMS	• Actuators built in profiles • Load performance 150kg/lift element • Dimension 40x80 mm or 45x90 mm • Adjustable range up to 400 mm	electric
Lifting Columns ELS3 HeavyDuty	• Elegant solution for heavy loads • Load performance 100kg/ lift element • Square guiding tube • Adjustable range up to 500 mm	electric
Movotec Lift Systems	• Drive via hand crank or electric motor • Load performance 150kg/lift element • Adjustable range up to 400 mm	hydraulic

Movotec SMS and ELS3 HeavyDuty Accessories

ELS3 HeavyDuty Subframe

We offer a complete table subframe made of steel profile (silver-gray color RAL 9006) for two or four ELS3 HeavyDuty lifting columns, with screws and adjustable bases (for the lifting column specification, see the table on page 55). The table subframe is suitable for table tops with the dimension 1,600 x 800 mm, 1,800 x 800 mm or 2,000 x 800 mm.

All dimensions in mm.

2-leg HeavyDuty subframe		
Table frame length	Order number	Description
1,600 mm	15311964	EAT3-HD-1600-002-01-S
1,800 mm	15311965	EAT3-HD-1800-002-01-S
2,000 mm	15311966	EAT3-HD-2000-002-01-S

4-leg HeavyDuty subframe		
Table frame length	Order number	Description
1,600 mm	15311967	EAT3-HD-1600-004-01-S
1,800 mm	15311968	EAT3-HD-1800-004-01-S
2,000 mm	15311969	EAT3-HD-2000-004-01-S

Please find the assembly instruction online at www.suspa.com/suspa-downloads/

Control box and link cable for ELS3 HeavyDuty and Movotec SMS

Control box SCT4

- Input voltage: 230 V / 50 Hz
- Output rating: 340 VA (28 VDC at 10 % switch-on duration)
- Four actuator outlets per control, extendable to eight actuators with link cable
- Load-independent actuator synchronization
- Switch-on duration 10 % (2 min operation / 18 min pause)
- Standby use: < 4 W (on request < 0.4 W)
- Soft-Start and Soft-Stop
- Travel monitoring to protect the system
- Weight (typical): approx. 3.2 kg (toroidal transformer)
- Dimensions: 257 x 120 x 60 mm
- Protection class II (protective insulation)

Link cable

Order no. 19810134

- Connection of two controllers (for 6- or 8-actuator-systems)
- 4 m cable length

Hand switches for ELS3 HeavyDuty and Movotec SMS

- One bracket set order for each SMS actuator used

* for easy fastening of
Creform® connectors
(connectors not included)

Movotec Lift Systems

The hydraulic adjustment system for heavy loads

Height adjustment for retrofit

The Bolt-On system is delivered as a kit for retrofitting. Using the retrofit system, you can retrofit your work table that previously could not be adjusted in height with just a few steps, thus making it a height-adjustable workplace. The system includes four to eight Bolt-On cylinders and a pump with hand crank or electric motor.

Movotec Bolt-On Systems

System with hand crank

System with electric motor

max. load (kg)	Adjusting range / stroke* (mm)			
340	150	200	300	400
454	150	200	300	400
590	150	230	300	393

* The adjusting range of systems with electric motor is 6-8mm less.

The system includes

- Crank or motor driven system (incl. control box and switches)
- 1 to 4 Bolt-On lift cylinders
- Hydraulic flexible tubing in individual lengths
- Glides for each lift cylinder
- Drilling templates, tubing clips and cable ties
- Installation and operating instructions

Movotec "Bolt-On" lift systems are readily available, shipped completely assembled and ready for installation.

Movotec Bolt-On Dual Drive Systems for 6 to 8 cylinders

Synchronized 8-leg-system with electric motor

max. load (kg)	Adjusting range / stroke* (mm)				Number of cylinders
680	150	200	300	400	6
907	150	200	300	400	8

* The adjusting range of systems with electric motor is 6-8mm less.

The system includes

- Two synchronized motor driven systems with controllers and switch
- 5 to 8 Bolt-On lift cylinders
- Hydraulic flexible tubing in individual lengths
- Glides for each lift cylinder
- Drilling templates, tubing clips and cable ties
- Installation and operating instructions

Movotec Dual Drive Lift Systems are shipped assembled and ready for installation.

SUSPA – Your strong industrial partner

For more than 60 years, SUSPA products have been present in your daily life - at home in furniture, refrigerators and washing machines, in means of transport like buses, trains and planes, in modern office furniture, in leisure and fitness equipment, but also in hospitals and rehab centers.

Although you may not be able to see our products, we are always there – increasing the comfort and safety level for all of you.

Major players in the automobile, office furniture, industrial, transportation, appliance, health care, leisure, and gaming industries depend on SUSPA as a developmental and systems solution partner. Our engineers and technical sales team will work seamlessly with your staff on a wide variety of projects, committed to providing the most effective solution for your organization.

Reliability as the highest standard

Requirements on quality are increasing in the automotive industry as well as in other industry sectors. SUSPA certifications according to IATF 16949 have therefore been an integral part.

Effective quality management from purchasing to production and sales and on to final application secures the worldwide great reputation and reliability of SUSPA products.

SUSPA moves.

With more than 2,000 employees worldwide SUSPA manufactures gas springs, dampers, adjustment systems as well as crash and safety systems for many sectors; from furniture through to automobile industry.
