MOVABLE PLEXIGLASS SHIELDS

SKSMEKANIikka

Protect your facilities with movable plexiglass shields

Aluminium profiles can be used for multiple applications, one example being movable plexiglass shields to protect service points and warehouse and production facilities.

Compared to fixed plexiglass sneeze shields, movable shields are light and easy to transfer when needed. The shield consists of aluminium profile frame, joint hinges and plexiglass. Thanks to the joints, the shields can be easily modified and folded. Our product range includes table and service desk models as well as a higher production facility model.

Customer specific tailor made sneeze shields are also available. Plexiglass shield can be delivered pre-assembled or in parts. Please contact our sales for more information.

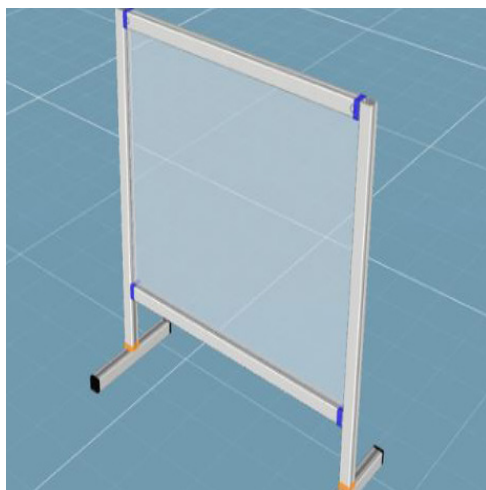

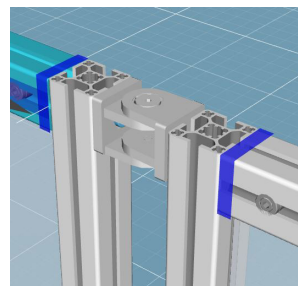

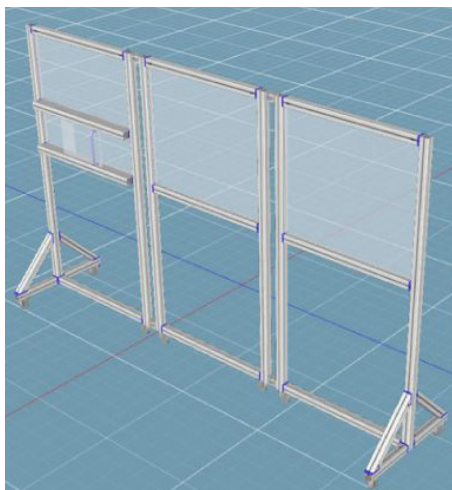

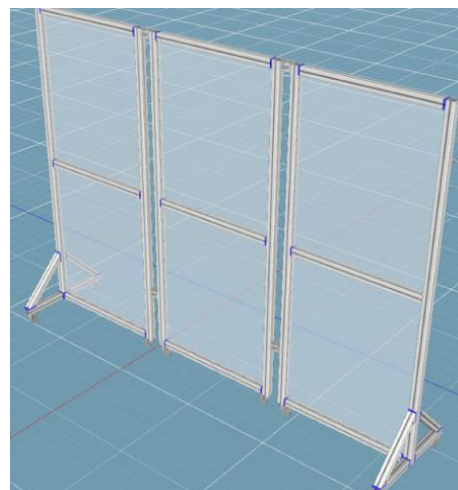

Table model, price range from 95 € + VAT

Table model is suitable for production facilities in which the employees sit by the table. The size of the model is 500 x 500 mm.

Service desk model, price range from 845 € + VAT

Service desk model is suitable for seated production facilities and service points. The size of the models is 1500 x 2500 mm.

Model for other facilities, price range from 995 € + VAT

This model is suitable for isolating and protecting warehouse and production facilities. The size of the model is 1800 x 2500 mm.

Maytec aluminium profile product range is large and consistent. All the parts can be easily attached and they can be used to build stylish solutions for different applications. The most common applications are protection walls and machine frames.

Maytec aluminium profiles are easy to assemble. The flexible and modular structure allows quick modifications. The profile selection includes over 180 models which can be used to build multiple different kind of solutions. Profiles are made of Al Mg Si 0,5 F25. Maytec profile series include 16-60 mm profiles and the number of grooves varies between 0-12.
