

The Semiflex® series

Standard F series

Symbiosis of performance and compact design
Bore diameter up to 120 mm
Torque (T_{KN}) 44 Nm to 7.040 Nm

Compact Plus C series

For extremely axially limited space
Bore diameter up to 100 mm
Torque (T_{KN}) 69 Nm to 7.040 Nm

Dynamic D series

The light-weight aluminum series
Bore diameter up to 35 mm
Torque (T_{KN}) 40 Nm to 180 Nm

Semiflex®

Semiflex® is a high-precision coupling in a compact design and with no restoring forces. Semiflex® offers large radial misalignment capacity in a very small envelope. Semiflex® is, by design, free of restoring forces. For highly dynamic applications, Semiflex® is also available in an aluminum series.

Standard F series

A symbiosis of performance, compact design and generous misalignment capacity.

1. Calculation of the design torque. Please multiply your continuous torque by the required performance factor (table 1) and the required service factor (table 2) to get the design torque.

An alternative:

simply use under www.schmidt-kupplung.com the

TD Calculator of the column Semiflex®

5. Make sure that the misalignment capability is sufficient. There is a trade-off between the radial, axial and angular misalignment capabilities. Be certain that the combined percentages of each do not exceed 100%.

2. Select a coupling size that has a continuous torque rating greater than your calculated design torque.
3. Make sure that the peak torque of the application does not exceed the maximum torque rating of the coupling.
4. Please check the coupling maximum speed to be sure it is within the rated maximum speed.
