

Ball Screws, Trapeziodal Screws and Lead Screws

Precision Screws Built for Optimized Performance, Repeatability and Stiffness

Linear Motion. Optimized.™

Thomson – the Choice for Optimized Motion Solutions

Often the ideal design solution is not about finding the fastest, sturdiest, most accurate or even the least expensive option. Rather, the ideal solution is the optimal balance of performance, life and cost.

Quickly Configure the Optimal Mechanical Motion Solution

Thomson has several advantages that makes us the supplier of choice for motion control technology.

- Thomson owns the broadest standard product offering of mechanical motion technologies in the industry.
- Modified versions of standard product or white sheet design solutions are routine for us.
- Choose Thomson and gain access to over 70 years of global application experience in industries including packaging, factory automation, material handling, medical, clean energy, printing, automotive, machine tool, aerospace and defense.
- As part of Altra Industrial Motion, we are financially strong and unique in our ability to bring together control, drive, motor, power transmission and precision linear motion technologies.

A Name You Can Trust

A wealth of product and application information as well as 3D models, software tools, our distributor locator and global contact information is available at www.thomsonlinear.com/contact_us. Talk to us early in the design process to see how Thomson can help identify the optimal balance of performance, life and cost for your next application. And, call us or any of our 2000+ distribution partners around the world for fast delivery of replacement parts.

Satisfying the diversity of needs for ball screw actuation

The basic technology of ball screw actuation is simple. And yet, the great diversity of demands made on ball screws requires a corresponding breadth in both product offerings and technical expertise in application. Challenges facing machine designers include:

- **Meeting stringent time and cost demands**

Having the flexibility to meet shorter delivery times is often accompanied by increasing pressure to keep costs down. With a wide range of pre-stocked ball screws and drives, Thomson has decades of manufacturing expertise and the associated infrastructure to deliver the optimal ball screw solution efficiently and promptly.

- **Getting it right the first time**

A companion to tight deadlines and budgets is the need for the right design solution. With the benefit of decades of global application experience, Thomson has published helpful, online tools that allow for quick and easy sizing and selection of the optimal linear component solution.

- **Finding reliable resources**

It's no coincidence that Thomson has been a leader in ball screw and drive technology for nearly a century. We pride ourselves on manufacturing to the highest of standards and ensuring that each of our customers' precise requirements are being met.

Thomson ball screws offer the optimal solution for your linear motion applications

Thomson is the world's leading manufacturer of ball screws. These products are used in some of the most demanding applications, including machine tools, handling machinery, technical devices used in medical and aviation markets.

Our wide product range is bound to contain the right drive for almost any motion task: from small custom thread drives for highly sensitive medical devices to ball screws for high-performance machine tools with stringent speed and stiffness requirements.

We strive to provide customers with the perfect solution for their applications, no matter their requirements in load, speed, stiffness, accuracy, service life and reliability. With more than 50 years of experience in precision screw manufacturing and impeccable quality management, Thomson guarantees the highest levels of performance, quality and reliability.

Recirculating ball screws

Thomson ball screws are ideal for many technological and mechanical engineering applications. These include:

- Machine tools
- Aircraft construction
- Wood working
- Handling equipment, industrial robots
- Printing and paper machines
- Traffic engineering
- Medical equipment
- Measuring technology

A ball screw is a driving element for converting rotary motion into axial motion and vice versa. A ball screw consists of a ball screw shaft, a ball nut featuring a ball return and the balls themselves.

Action: Torque $M_e \rightarrow$ Reaction: Force F_a

Action: Force $F_e \rightarrow$ Reaction: Torque M_e

The balls, which roll between the screw shaft and the nut, offer optimum levels of efficiency (up to 98%).

As a result, ball screws, unlike trapezoidal screws, are not capable of self locking.

Ⓐ Efficiency for ball screws according to Fig. 1

Ⓑ Efficiency for ball screws according to Fig. 2

Ⓒ Efficiency for trapezoidal screw

Advantages of ball screws compared to trapezoidal screws include:

- More accurate positioning throughout service life
- Less wear, longer service life
- Less drive power required
- Less heat generated
- Higher travel speeds
- No stick/slip effect

Technical data for recirculating ball screws

Manufacturing process

Thomson recirculating ball screws are manufactured in rolled, ground and whirled versions. Both shaft and nut have a gothic arc profile. The lead angle is 45°.

Speeds

The permissible speed limit is currently 3000 rpm, and up to 4500 rpm for spot measurements. This speed limit identifies the maximum speed that may only be used under optimum operating conditions.

Mounting position

The mounting position of a ball screw may be selected freely. The only factor to be taken into consideration is that all radial forces generated must be absorbed by external guides.

Precision

Rolled Thomson ball screw shafts are available in tolerance classes P3, P5, T5 and T7.

Ground/whirled Thomson Neff recirculating ball screws are available in tolerance classes up to P0.

Self-locking

Thanks to their low rolling friction, recirculating ball screws are not self-locking. Therefore, it is necessary to fit suitable motors with a holding brake, especially if the ball screw is mounted vertically.

Temperatures

All ball screws are designed for ambient temperatures between -30°C and 80°C, and temperatures up to 110°C are also permitted for intermittent operations. Ball screws are only conditionally suited for temperatures below freezing.

Repetition accuracy

Repetition accuracy refers to the capability of a ball screw to return to the set position it had previously traveled to under the same conditions. It corresponds to the mean position scatter range as defined in VDI/DGQ 3441. Repetition accuracy is influenced by factors, including:

- Load
- Speed
- Deceleration
- Direction of movement
- Temperature

Precision drives us

The Thomson ball screw range complies with DIN 69051 and ISO 3408. All ball nuts, both flanged and cylindrical, are available with connections complying with DIN specifications.

Every shaft can be supplied with customized end journals, and upon request, customers can order screws with an annealed end for machining their own end journal.

Rolled ball screws

Thread rolling manufacturing

Rolled ball screw shafts are manufactured by cold forming without chip removal. In this procedure, the bar stock is given a ball track in a continuous process. This means that it is, in principle, possible to create leads of any amount and to form any number of threads on the ball screw shaft. The shafts are then heat treated and polished. The forming process ensures high strength and a good surface finish for the ball screw shafts.

Rolled ball screw shafts and the associated standard nuts can be supplied directly from stock at favorable prices.

Special nuts to meet particular customer requirements are also possible.

Thomson offers machined ends to the ball screw shafts, such as bearing seats, both to meet customer requirements and in accordance with common standard forms.

Tolerance classes

Rolled ball screw shafts are available in classes P3, P5, T5 and T7.

Lengths

Various maximum shaft lengths are possible as a function of the nominal diameter:

- Nominal diameter ≤ 12 mm = maximum shaft length 3000 mm
- Nominal diameter > 12 mm = maximum shaft length 6000 mm

Thomson rolled shafts set the standard in quality:

- Low surface roughness due to non-cutting rolling process and finishing polishing
- Long service lives due to optimized profiles and the maximum number of threads while simultaneously using large balls
- Great quality and stable running due to patented ball circulation systems
- Decades of experience in the manufacture of rolled and ground ball screws

Nuts

A wide range of stock nut styles are available for you to use with our rolled shafts:

- FK, FH, KGF-D style flanged nuts with dimensions complying with DIN 69051
- KGF-N style flanged nuts with a round flange and dimensions complying with the Thomson Neff standard
- Internally preloaded FL style flanged nuts with dimensions as specified in DIN 69051
- ZG style cylindrical nuts with external thread with dimensions complying with DIN 69051
- KGM-D style cylindrical nuts with keyway with dimensions complying with DIN 69051
- KGM-N style cylindrical nuts with keyway with dimensions complying with Thomson Neff standards

KGF-D style nuts can be combined with KGF-D or KGM-D style nuts to create preloaded nut units. The same is true for KGF-N style nuts which can be combined with KGF-N and KGM-N style nuts. Please contact our technical advisory service for further options with regards to preloaded nuts. Upon request, you may also have Thomson nuts mounted backlash-free or with low backlash.

Ball screw nuts – return systems overview

Thomson offers a wide breadth of ball nut configurations to seamlessly interface to the application. Most ball nuts have profiled wiper rings to reduce the escape of lubricant and prevent the ingress of dirt.

Ball Nut Mounting Alternatives

Thomson offers flanged ball nuts that are attached via a set of mounting holes or cylindrical nuts that have a keyway or external thread. Custom interfaces such as trunnions and nut housings are also available.

Ball Recirculation Systems

Thomson manufactures ball nuts with three different ball recirculation systems depending on the diameter and lead of the ball screw shaft in use.

1

Single Return (E) and Multi Liner (M)

After each turn, the balls are lifted from the shaft raceway and set back by a single turn. Our return systems are made from glass-fiber reinforced plastic or steel to guarantee precise, gentle recirculation of the balls.

2

Channel Return (K)

After several turns, the balls are returned either by a patented plastic recirculation system integrated into the nut or through channels also integrated into the nut using steel inserts.

3

End-Cap Return (D)

The balls are recirculated via two special end caps and return channels integrated into the nut.

Preloading

If the ball nut unit is preloaded on the ball screw, the following results can be achieved:

- Increased positioning accuracy
- Increased stiffness in the nut area
- Reduced width of backlash

Preloading with 2-point ball contact:

Standard preloading force: 10% of dynamic rated load

Designs:

- VDM preloaded double nut
- VEM-2 and FL preloaded single nut with internal thread shift
- VEM-2 preloaded single nut with internal thread shift between individual threads (only where there is more than one thread)

Preloading with 4-point ball contact:

Standard preloading force: 4% of dynamic rated load

Design:

Preloaded single nut with oversized ball bearings VEM-4

Note:

- Allows shorter nut lengths to be used
- Not suitable for all applications due to increased levels of sliding friction, but provides a cost-effective solution in certain cases

Note:

In the case of lead precisions poorer than P5 and shaft leads < diameter d_0 , the unit can only be set to low backlash. The overall length of the nuts can be increased by up to 10 mm as a consequence of the preloading system used.

Single nuts may also be supplied assembled backlash-free on request. Please contact customer support.

Preloading

Ball nut units – pre-loaded

As a rule all nuts can be combined to form backlash-free, pre-loaded nut units except when the lead is equal to or greater than the diameter of the screw.

Thomson supplies ready-to-install units with “O” pre-loading.

O pre-loading:

With this type of pre-loading, the lines of forces run in a rhomboidal pattern (O-shaped), i.e. the nuts are pressed apart by the pre-loading force. This configuration offers particularly high rigidity against tilting. The standard preloading is equal to 10% of the dynamic load rating C.

Note:

Backlash-free preloading is only possible with a lead accuracy $\leq 50 \mu\text{m}/300 \text{ mm}$ and leads $P < \text{diameter } d_0$.

Lead accuracies of $> 50 \mu\text{m}/300 \text{ mm}$ and leads $\geq \text{diameter } d_0$ only allow a low backlash preloading. The total length of the nut can accelerate up to 10 mm due to the installed preloading disc.

Single nuts mounted backlash-free on request. Please contact our technical support.

Pre-loading variants

KGT-FM

Ball screw drive with one KGF flanged nut and one KGM cylindrical nut with

O-pre-loading.

KGT-MM

Ball screw drive with two KGM cylindrical nuts and O-pre-loading. Only one of the two feather keys transmits the drive torque.

KGT-FF

Ball screw drive with two KGF flanged nuts with O-pre-loading.

Number of Balls	90
Wiper Type	N/A
Part Number	8103-448-052

(1) T7 = 52 µm / 300 mm

(2) Z2 = no preload, clearance held to max. indicated in table (standard unless specified)

Ø 10 x 3 mm – Miniature Metric Ball Screws – Rolled

Ball Screw

Nominal Ball Screw Diameter	10 mm
Nominal Ball Screw Lead	3 mm
Thread Direction	Right Hand
Screw Material	CF53
Screw Weight	0.58 kg/m
Nominal Ball Diameter	1.984 mm
Lead Accuracy ⁽¹⁾ T7 Part Number	190-9681

Ball screws can be cut to the length you require. Specify ball screw part number and overall length at time of order

Flanged Ball Nut

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	4.8 kN
Max. Static Load	8.6 kN
Torque to Raise 1 kN	0.53 Nm
Nut Weight	0.1 kg
Preload Classes ⁽²⁾	Z2
Standard max. Backlash	0.05 mm
Ball Return Type	Multi Circuit Liner
Number of Balls	98
Wiper Type	N/A
Part Number	8103-448-040

(1) T7 = 52 µm / 300 mm

(2) Z2 = no preload, clearance held to max. indicated in table (standard unless specified)

Threaded Ball Nut

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	4.8 kN
Max. Static Load	8.6 kN
Torque to Raise 1 kN	0.53 Nm
Nut Weight	0.1 kg
Preload Classes ⁽²⁾	Z2
Standard max. Backlash	0.05 mm
Ball Return Type	Multi Circuit Liner
Number of Balls	98
Wiper Type	N/A
Part Number	8103-448-023

(1) T7 = 52 µm / 300 mm

(2) Z2 = no preload, clearance held to max. indicated in table (standard unless specified)

Ø 10 x 3 mm – Miniature Metric Ball Screws – Rolled

Ball Screw

Nominal Ball Screw Diameter	10 mm
Nominal Ball Screw Lead	3 mm
Thread Direction	Right Hand
Screw Material	CF53
Screw Weight	0.58 kg/m
Nominal Ball Diameter	1.984 mm
Lead Accuracy ⁽¹⁾ T7 Part Number	190-9681

Ball screws can be cut to the length you require. Specify ball screw part number and overall length at time of order

Cylindrical Ball Nut

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	4.8 kN
Max. Static Load	8.6 kN
Torque to Raise 1 kN	0.53 Nm
Nut Weight	0.1 kg
Preload Classes ⁽²⁾	Z2
Standard max. Backlash	0.05 mm
Ball Return Type	Multi Circuit Liner
Number of Balls	98
Wiper Type	N/A
Part Number	8103-448-053

(1) T7 = 52 µm / 300 mm

(2) Z2 = no preload, clearance held to max. indicated in table (standard unless specified)

Ø 10 x 10 mm – Miniature Metric Ball Screws – Rolled

Ball Screw

Nominal Ball Screw Diameter	10 mm
Nominal Ball Screw Lead	10 mm
Thread Direction	Right Hand
Screw Material	CF53
Screw Weight	0.58 kg/m
Nominal Ball Diameter	1.984 mm
Lead Accuracy ⁽¹⁾ T7 Part Number	190-9689

Ball screws can be cut to the length you require. Specify ball screw part number and overall length at time of order

Flanged Ball Nut

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	2.9 kN
Max. Static Load	5.2 kN
Torque to Raise 1 kN	1.77 Nm
Nut Weight	0.1 kg
Preload Classes ⁽²⁾	Z2
Standard max. Backlash	0.05 mm
Ball Return Type	Internal
Number of Balls	76
Wiper Type	N/A
Part Number	8103-448-042

(1) T7 = 52 µm / 300 mm

(2) Z2 = no preload, clearance held to max. indicated in table (standard unless specified)

Threaded Ball Nut

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	2.9 kN
Max. Static Load	5.2 kN
Torque to Raise 1 kN	1.77 Nm
Nut Weight	0.1 kg
Preload Classes ⁽²⁾	Z2
Standard max. Backlash	0.05 mm
Ball Return Type	Internal
Number of Balls	76
Wiper Type	N/A
Part Number	8103-448-030

(1) T7 = 52 µm / 300 mm

(2) Z2 = no preload, clearance held to max. indicated in table (standard unless specified)

Ø 10 x 10 mm – Miniature Metric Ball Screws – Rolled

Ball Screw

Nominal Ball Screw Diameter	10 mm
Nominal Ball Screw Lead	10 mm
Thread Direction	Right Hand
Screw Material	CF53
Screw Weight	0.58 kg/m
Nominal Ball Diameter	1.984 mm
Lead Accuracy ⁽¹⁾ T7 Part Number	190-9689

Ball screws can be cut to the length you require. Specify ball screw part number and overall length at time of order

Cylindrical Ball Nut

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	2.9 kN
Max. Static Load	5.2 kN
Torque to Raise 1 kN	1.77 Nm
Nut Weight	0.1 kg
Preload Classes ⁽²⁾	Z2
Standard max. Backlash	0.05 mm
Ball Return Type	Internal
Number of Balls	76
Wiper Type	N/A
Part Number	8103-448-055

(1) T7 = 52 µm / 300 mm

(2) Z2 = no preload, clearance held to max. indicated in table (standard unless specified)

Ø 12 x 2 mm – Miniature Metric Ball Screws – Rolled

Ball Screw

Nominal Ball Screw Diameter	12 mm
Nominal Ball Screw Lead	2 mm
Thread Direction	Right Hand
Screw Material	CF53
Screw Weight	0.86 kg/m
Nominal Ball Diameter	1.588 mm
Lead Accuracy ⁽¹⁾ T7 Part Number	190-9690

Ball screws can be cut to the length you require. Specify ball screw part number and overall length at time of order

Flanged Ball Nut

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	6.8 kN
Max. Static Load	13.1 kN
Torque to Raise 1 kN	0.35 Nm
Nut Weight	0.1 kg
Preload Classes ⁽²⁾	Z2
Standard max. Backlash	0.05 mm
Ball Return Type	Multi Circuit Liner
Number of Balls	198
Wiper Type	N/A
Part Number	8105-448-043

(1) T7 = 52 µm / 300 mm

(2) Z2 = no preload, clearance held to max. indicated in table (standard unless specified)

Threaded Ball Nut

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	6.8 kN
Max. Static Load	13.1 kN
Torque to Raise 1 kN	0.35 Nm
Nut Weight	0.1 kg
Preload Classes ⁽²⁾	Z2
Standard max. Backlash	0.05 mm
Ball Return Type	Multi Circuit Liner
Number of Balls	198
Wiper Type	N/A
Part Number	8103-448-031

(1) T7 = 52 µm / 300 mm

(2) Z2 = no preload, clearance held to max. indicated in table (standard unless specified)

Ø 12 x 2 mm – Miniature Metric Ball Screws – Rolled

Ball Screw

Nominal Ball Screw Diameter	12 mm
Nominal Ball Screw Lead	2 mm
Thread Direction	Right Hand
Screw Material	CF53
Screw Weight	0.86 kg/m
Nominal Ball Diameter	1.588 mm
Lead Accuracy ⁽¹⁾ T7 Part Number	190-9690

Ball screws can be cut to the length you require. Specify ball screw part number and overall length at time of order

Cylindrical Ball Nut

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	6.8 kN
Max. Static Load	13.1 kN
Torque to Raise 1 kN	0.35 Nm
Nut Weight	0.1 kg
Preload Classes ⁽²⁾	Z2
Standard max. Backlash	0.05 mm
Ball Return Type	Multi Circuit
Number of Balls	198
Wiper Type	N/A
Part Number	8105-448-056

(1) T7 = 52 µm / 300 mm

(2) Z2 = no preload, clearance held to max. indicated in table (standard unless specified)

Ø 12 x 4 mm – Metric Ball Screws – Rolled

Ball Screw

Nominal Ball Screw Diameter	12 mm
Nominal Ball Screw Lead	4 mm
Thread Direction	Right Hand
Number of Turns	1
Screw Material	CF53
Screw Weight	0.76 kg/m
Nominal Ball Diameter	2.0 mm
Lead Accuracy ⁽¹⁾ T7 Part Number	0220150

Ball screws can be cut to the length you require. Specify ball screw part number and overall length at time of order

Cylindrical Ball Nut – KGM-N

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	4.9 kN
Max. Static Load	6.6 kN
Torque to Raise 1 kN	0.708 Nm
Nut Weight	0.1 kg
Preload Classes ⁽²⁾	See order code on page 98
Standard max. Backlash	0.024 mm
Ball Return Type	Channel
Number of Balls	63
Wiper Type	N/A
Part Number	0215050293

Threaded Ball Nut – KGM-G

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	3.8 kN
Max. Static Load	4.3 kN
Torque to Raise 1 kN	0.708 Nm
Nut Weight	0.1 kg
Preload Classes ⁽²⁾	See order code on page 98
Standard max. Backlash	0.024 mm
Ball Return Type	Single Circuit
Number of Balls	60
Wiper Type	N/A
Part Number	0215050362

(1) P3 = 12 µm / 300 mm, P5 = 23 µm / 300 mm, T5 = 23 µm / 300 mm, T7 = 52 µm / 300 mm

(2) Please ask Thomson Customer Service for available preload options

Note: Dimensional information for all End Journals and Bearing Supports is available on page 87 – 97. Information on required lubrication is on page 114.

Ø 12 x 5 mm – Metric Ball Screws – Rolled

Ball Screw

Nominal Ball Screw Diameter	12 mm
Nominal Ball Screw Lead	5 mm
Thread Direction	Right Hand
Number of Turns	1
Screw Material	CF53
Screw Weight	0.76 kg/m
Nominal Ball Diameter	5 mm
Lead Accuracy ⁽¹⁾ T7 Part Number	0220150

Ball screws can be cut to the length you require. Specify ball screw part number and overall length at time of order

Cylindrical Ball Nut – KGM-N

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	4.4 kN
Max. Static Load	6.8 kN
Torque to Raise 1 kN	0.885 Nm
Nut Weight	0.1 kg
Preload Classes ⁽²⁾	See order code on page 98
Standard max. Backlash	0.024 mm
Ball Return Type	Channel
Number of Balls	63
Wiper Type	N/A
Part Number	0215050250

(1) P3 = 12 µm / 300 mm, P5 = 23 µm / 300 mm, T5 = 23 µm / 300 mm, T7 = 52 µm / 300 mm

(2) Please ask Thomson Customer Service for available preload options

Note: Dimensional information for all End Journals and Bearing Supports is available on page 87 – 97. Information on required lubrication is on page 114..

Ø 12 x 10 mm – Metric Ball Screws – Rolled

Ball Screw

Nominal Ball Screw Diameter	12 mm
Nominal Ball Screw Lead	10 mm
Thread Direction	Right Hand
Number of Turns	2
Screw Material	CF53
Screw Weight	0.75 kg/m
Nominal Ball Diameter	2.0 mm
Lead Accuracy ⁽¹⁾ T7 Part Number	0205000224

Ball screws can be cut to the length you require. Specify ball screw part number and overall length at time of order

Flanged Ball Nut – KGF-D

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	4.9 kN
Max. Static Load	8.0 kN
Torque to Raise 1 kN	1.77 Nm
Nut Weight	0.1 kg
Preload Classes ⁽²⁾	See order code on page 98
Standard max. Backlash	0.024 mm
Ball Return Type	End Cap
Number of Balls	63
Wiper Type	Polymer
Part Number	0215200295

(1) P3 = 12 µm / 300 mm, P5 = 23 µm / 300 mm, T5 = 23 µm / 300 mm, T7 = 52 µm / 300 mm

(2) Please ask Thomson Customer Service for available preload options

Note: Dimensional information for all End Journals and Bearing Supports is available on page 87 – 97. Information on required lubrication is on page 114.

Ø 12 x 10 mm – Metric Ball Screws – Rolled

Ball Screw

Nominal Ball Screw Diameter	12 mm
Nominal Ball Screw Lead	10 mm
Thread Direction	Right Hand
Number of Turns	2
Screw Material	CF53
Screw Weight	0.75 kg/m
Nominal Ball Diameter	2.0 mm
Lead Accuracy ⁽¹⁾ T7 Part Number	0205000224

Ball screws can be cut to the length you require. Specify ball screw part number and overall length at time of order

Cylindrical Ball Nut – KGM-D

DIN 69051 **Compliance**

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	4.49 kN
Max. Static Load	8.0 kN
Torque to Raise 1 kN	1.77 Nm
Nut Weight	0.1 kg
Preload Classes ⁽²⁾	See order code on page 98
Standard max. Backlash	0.024 mm
Ball Return Type	End Cap
Number of Balls	63
Wiper Type	Polymer
Part Number	0215050328

(1) P3 = 12 µm / 300 mm, P5 = 23 µm / 300 mm, T5 = 23 µm / 300 mm, T7 = 52 µm / 300 mm

(2) Please ask Thomson Customer Service for available preload options

Note: Dimensional information for all End Journals and Bearing Supports is available on page 87 – 97. Information on required lubrication is on page 114.

Ø 16 x 5 mm – Metric Ball Screws – Rolled

Ball Screw

Nominal Ball Screw Diameter	16 mm
Nominal Ball Screw Lead	5 mm
Thread Direction	Right Hand
Number of Turns	1
Screw Material	CF53
Screw Weight	1.38 kg/m
Nominal Ball Diameter	3.5 mm
Lead Accuracy ⁽¹⁾ T7 Part Number	0220010

Ball screws can be cut to the length you require. Specify ball screw part number and overall length at time of order

Flanged Ball Nut – KGF-D

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	9.3 kN
Max. Static Load	13.1 kN
Torque to Raise 1 kN	0.885 Nm
Nut Weight	0.2 kg
Preload Classes ⁽²⁾	See order code on page 98
Standard max. Backlash	0.041 mm
Ball Return Type	Single Circuit Polymer
Number of Balls	45
Wiper Type	Polymer
Part Number	0215200048

Flanged Ball Nut – KGF-D (FK)

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	9.5 kN
Max. Static Load	10.9 kN
Torque to Raise 1 kN	0.885 Nm
Nut Weight	0.3 kg
Preload Classes ⁽²⁾	See order code on page 98
Standard max. Backlash	0.041 mm
Ball Return Type	Single Circuit Metal
Number of Balls	42
Wiper Type	Polymer
Part Number	0215200269

Flanged Ball Nut – FL

(can only be used with a P3 or P5 lead accuracy screw)

Thread Direction	Right Hand
Nut Material	
Dynamic Load	6.7 kN
Max. Static Load	7.2 kN
Torque to Raise 1 kN	
Nut Weight	
Preload Classes ⁽²⁾	
Standard max. Backlash (Z0)	
Ball Return Type	EUS
Number of Balls	
Wiper Type	
Part Number	

(1) see foot note 1 on next page

(2) see foot note 2 on next page

Ø 16 x 5 mm – Metric Ball Screws – Rolled

Ball Screw

Nominal Ball Screw Diameter	16 mm
Nominal Ball Screw Lead	5 mm
Thread Direction	Right Hand
Number of Turns	1
Screw Material	CF53
Screw Weight	1.38 kg/m
Nominal Ball Diameter	3.5 mm
Lead Accuracy ⁽¹⁾ T7 Part Number	0220010

Ball screws can be cut to the length you require. Specify ball screw part number and overall length at time of order

Cylindrical Ball Nut – KGM-D

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	9.3 kN
Max. Static Load	13.1 kN
Torque to Raise 1 kN	0.885 Nm
Nut Weight	0.10 kg
Preload Classes ⁽²⁾	See order code on page 98
Standard max. Backlash	0.041 mm
Ball Return Type	Single Circuit
Number of Balls	45
Wiper Type	Polymer
Part Number	0215050112

Threaded Ball Nut - KGM-G

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	12.1 kN
Max. Static Load	14.5 kN
Torque to Raise 1 kN	0.885 Nm
Nut Weight	0.22 kg
Preload Classes ⁽²⁾	See order code on page 98
Standard max. Backlash	0.041 mm
Ball Return Type	Single Circuit
Number of Balls	56
Wiper Type	Polymer
Part Number	0215050301

(1) P3 = 12 µm / 300 mm, P5 = 23 µm / 300 mm, T5 = 23 µm / 300 mm, T7 = 52 µm / 300 mm

(2) Please ask Thomson Customer Service for available preload options

Note: Dimensional information for all End Journals and Bearing Supports is available on page 87 – 97. Information on required lubrication is on page 114.

Ø 16 x 10 mm – Metric Ball Screws – Rolled

Ball Screw

Nominal Ball Screw Diameter	16 mm
Nominal Ball Screw Lead	10 mm
Thread Direction	Right Hand
Number of Turns	2
Screw Material	CF53
Screw Weight	1.26 kg/m
Nominal Ball Diameter	3.0 mm
Lead Accuracy ⁽¹⁾ T7 Part Number	0220256

Ball screws can be cut to the length you require. Specify ball screw part number and overall length at time of order

Flanged Ball Nut – KGF-D

DIN 69051 Compliance

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	15.4 kN
Max. Static Load	26.5 kN
Torque to Raise 1 kN	1.77 Nm
Nut Weight	0.3 kg
Preload Classes ⁽²⁾	See order code on page 98
Standard max. Backlash	0.041 mm
Ball Return Type	Channel
Number of Balls	102
Wiper Type	Polymer
Part Number	0215200168

(1) P3 = 12 µm / 300 mm, P5 = 23 µm / 300 mm, T5 = 23 µm / 300 mm, T7 = 52 µm / 300 mm

(2) Please ask Thomson Customer Service for available preload options

Note: Dimensional information for all End Journals and Bearing Supports is available on page 87 – 97. Information on required lubrication is on page 114.

Ø 16 x 10 mm – Metric Ball Screws – Rolled

Ball Screw

Nominal Ball Screw Diameter	16 mm
Nominal Ball Screw Lead	10 mm
Thread Direction	Right Hand
Number of Turns	2
Screw Material	CF53
Screw Weight	1.26 kg/m
Nominal Ball Diameter	3.0 mm
Lead Accuracy ⁽¹⁾ T7 Part Number	0220256

Ball screws can be cut to the length you require. Specify ball screw part number and overall length at time of order

Cylindrical Ball Nut – KGM-D

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	15.4 kN
Max. Static Load	26.5 kN
Torque to Raise 1 kN	1.77 Nm
Nut Weight	0.2 kg
Preload Classes ⁽²⁾	See order code on page 98
Standard max. Backlash	0.035 mm
Ball Return Type	Channel
Number of Balls	102
Wiper Type	Polymer
Part Number	0215050209

(1) P3 = 12 µm / 300 mm, P5 = 23 µm / 300 mm, T5 = 23 µm / 300 mm, T7 = 52 µm / 300 mm

(2) Please ask Thomson Customer Service for available preload options

Note: Dimensional information for all End Journals and Bearing Supports is available on page 87 – 97. Information on required lubrication is on page 114..

Ø 20 x 5 mm – Metric Ball Screws – Rolled

Ball Screw

Nominal Ball Screw Diameter	20 mm
Nominal Ball Screw Lead	5 mm
Thread Direction	Right Hand
Number of Turns	1
Screw Material	CF53
Screw Weight	2.20 kg/m
Nominal Ball Diameter	3.5 mm
Lead Accuracy ⁽¹⁾ T7 Part Number	0220148

Ball screws can be cut to the length you require. Specify ball screw part number and overall length at time of order

Flanged Ball Nut – KGF-D

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	10.5 kN
Max. Static Load	16.6 kN
Torque to Raise 1 kN	0.885 Nm
Nut Weight	0.25 kg
Preload Classes ⁽²⁾	See order code on page 98
Standard max. Backlash	0.035 mm
Ball Return Type	Channel
Number of Balls	48
Wiper Type	Polymer
Part Number	0215200185

Flanged Ball Nut – KGF-D (FK)

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	11.5 kN
Max. Static Load	15.5 kN
Torque to Raise 1 kN	0.885 Nm
Nut Weight	0.4 kg
Preload Classes ⁽²⁾	See order code on page 98
Standard max. Backlash	0.041 mm
Ball Return Type	Single Circuit Metal
Number of Balls	54
Wiper Type	Polymer
Part Number	0215200271

Flanged Ball Nut – FL

(can only be used with a P3 or P5 lead accuracy screw)

Thread Direction	Right Hand
Nut Material	
Dynamic Load	11.5 kN
Max. Static Load	15.5 kN
Torque to Raise 1 kN	
Nut Weight	
Preload Classes ⁽²⁾	
Standard max. Backlash (Z0)	
Ball Return Type	EUS
Number of Balls	
Wiper Type	
Part Number	

(1) see foot note 1 on next page

(2) see foot note 2 on next page

Ø 20 x 5 mm – Metric Ball Screws – Rolled

Ball Screw

Nominal Ball Screw Diameter	20 mm
Nominal Ball Screw Lead	5 mm
Thread Direction	Right Hand
Number of Turns	1
Screw Material	CF53
Screw Weight	2.20 kg/m
Nominal Ball Diameter	3.5 mm
Lead Accuracy ⁽¹⁾ T7 Part Number	0220148

Ball screws can be cut to the length you require. Specify ball screw part number and overall length at time of order

Cylindrical Ball Nut – KGM-D

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	10.5 kN
Max. Static Load	16.6 kN
Torque to Raise 1 kN	0.885 Nm
Nut Weight	0.2 kg
Preload Classes ⁽²⁾	See order code on page 98
Standard max. Backlash	0.041 mm
Ball Return Type	Channel
Number of Balls	48
Wiper Type	Polymer
Part Number	0215050258

Threaded Ball Nut – KGM-G

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	14.8 kN
Max. Static Load	20.7 kN
Torque to Raise 1 kN	0.885 Nm
Nut Weight	0.3 kg
Preload Classes ⁽²⁾	See order code on page 98
Standard max. Backlash	0.041 mm
Ball Return Type	Single Circuit
Number of Balls	72
Wiper Type	Polymer
Part Number	0215050307

(1) P3 = 12 µm / 300 mm, P5 = 23 µm / 300 mm, T5 = 23 µm / 300 mm, T7 = 52 µm / 300 mm

(2) Please ask Thomson Customer Service for available preload options

Note: Dimensional information for all End Journals and Bearing Supports is available on page 87 – 97. Information on required lubrication is on page 114..

Ø 20 x 20 mm – Metric Ball Screws – Rolled

Ball Screw

Nominal Ball Screw Diameter	20 mm
Nominal Ball Screw Lead	20 mm
Thread Direction	Right Hand
Number of Turns	4
Screw Material	CF53
Screw Weight	2.23 kg/m
Nominal Ball Diameter	3.5 mm
Lead Accuracy ⁽¹⁾ T7 Part Number	0220039

Ball screws can be cut to the length you require. Specify ball screw part number and overall length at time of order

Flanged Ball Nut – KGF-N

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	11.6 kN
Max. Static Load	18.4 kN
Torque to Raise 1 kN	3.54 Nm
Nut Weight	0.3 kg
Preload Classes ⁽²⁾	See order code on page 98
Standard max. Backlash	0.041 mm
Ball Return Type	End Cap
Number of Balls	100
Wiper Type	Rubber
Part Number	0215200181

Flanged Ball Nut – KGF-D (FH)

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	10.8 kN
Max. Static Load	17.5 kN
Torque to Raise 1 kN	3.54 Nm
Nut Weight	0.5 kg
Preload Classes ⁽²⁾	See order code on page 98
Standard max. Backlash	0.041 mm
Ball Return Type	End Cap
Number of Balls	100
Wiper Type	Polymer
Part Number	0215200228

(1) P3 = 12 µm / 300 mm, P5 = 23 µm / 300 mm, T5 = 23 µm / 300 mm, T7 = 52 µm / 300 mm

(2) Please ask Thomson Customer Service for available preload options

Note: Dimensional information for all End Journals and Bearing Supports is available on page 87 – 97. Information on required lubrication is on page 114.

Ø 20 x 20 mm – Metric Ball Screws – Rolled

Ball Screw

Nominal Ball Screw Diameter	20 mm
Nominal Ball Screw Lead	20 mm
Thread Direction	Right Hand
Number of Turns	4
Screw Material	CF53
Screw Weight	2.23 kg/m
Nominal Ball Diameter	3.5 mm
Lead Accuracy ⁽¹⁾ T7 Part Number	0220039

Ball screws can be cut to the length you require. Specify ball screw part number and overall length at time of order

Cylindrical Ball Nut – KGM-N

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	11.6 kN
Max. Static Load	18.4 kN
Torque to Raise 1 kN	3.54 Nm
Nut Weight	0.2 kg
Preload Classes ⁽²⁾	See order code on page 98

Ball Return Type	End Cap
Number of Balls	100
Wiper Type	Polymer
Part Number	0215050239

(1) P3 = 12 µm / 300 mm, P5 = 23 µm / 300 mm, T5 = 23 µm / 300 mm, T7 = 52 µm / 300 mm

(2) Please ask Thomson Customer Service for available preload options

Note: Dimensional information for all End Journals and Bearing Supports is available on page 87 – 97. Information on required lubrication is on page 114..

Ø 20 x 50 mm – Metric Ball Screws – Rolled

Ball Screw

Nominal Ball Screw Diameter	20 mm
Nominal Ball Screw Lead	50 mm
Thread Direction	Right Hand
Number of Turns	5
Screw Material	CF53
Screw Weight	2.05 kg/m
Nominal Ball Diameter	3.5 mm
Lead Accuracy ⁽¹⁾ T7 Part Number	0220213

Ball screws can be cut to the length you require. Specify ball screw part number and overall length at time of order

Flanged Ball Nut – KGF-N

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	13.0 kN
Max. Static Load	24.6 kN
Torque to Raise 1 kN	8.85 Nm
Nut Weight	0.4 kg
Preload Classes ⁽²⁾	See order code on page 98
Standard max. Backlash	0.041 mm
Ball Return Type	End Cap
Number of Balls	140
Wiper Type	Rubber
Part Number	0215200211

(1) P3 = 12 µm / 300 mm, P5 = 23 µm / 300 mm, T5 = 23 µm / 300 mm, T7 = 52 µm / 300 mm

(2) Please ask Thomson Customer Service for available preload options

Note: Dimensional information for all End Journals and Bearing Supports is available on page 87 – 97. Information on required lubrication is on page 114.

Ø 20 x 50 mm – Metric Ball Screws – Rolled

Ball Screw

Nominal Ball Screw Diameter	20 mm
Nominal Ball Screw Lead	50 mm
Thread Direction	Right Hand
Number of Turns	5
Screw Material	CF53
Screw Weight	2.05 kg/m
Nominal Ball Diameter	3.5 mm
Lead Accuracy ⁽¹⁾ T7 Part Number	0220213

Ball screws can be cut to the length you require. Specify ball screw part number and overall length at time of order

Cylindrical Ball Nut – KGM-N

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	13.0 kN
Max. Static Load	24.6 kN
Torque to Raise 1 kN	8.85 Nm
Nut Weight	0.3 kg
Preload Classes ⁽²⁾	See order code on page 98
Standard max. Backlash	0.041 mm
Ball Return Type	End Cap
Number of Balls	140
Wiper Type	Rubber
Part Number	0215050279

(1) P3 = 12 µm / 300 mm, P5 = 23 µm / 300 mm, T5 = 23 µm / 300 mm, T7 = 52 µm / 300 mm

(2) Please ask Thomson Customer Service for available preload options

Note: Dimensional information for all End Journals and Bearing Supports is available on page 87 – 97. Information on required lubrication is on page 114.

Ø 25 x 5 mm – Metric Ball Screws – Rolled

Ball Screw

Nominal Ball Screw Diameter	25 mm
Nominal Ball Screw Lead	5 mm
Thread Direction	Right Hand
Number of Turns	1
Screw Material	CF53
Screw Weight	3.32 kg/m
Nominal Ball Diameter	3.5 mm
Lead Accuracy ⁽¹⁾ T7 Part Number	0205000253

Ball screws can be cut to the length you require. Specify ball screw part number and overall length at time of order

Flanged Ball Nut – KGF-D

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	12.3 kN
Max. Static Load	22.5 kN
Torque to Raise 1 kN	0.885 Nm
Nut Weight	0.4 kg
Preload Classes ⁽²⁾	See order code on page 98
Standard max. Backlash	0.041 mm
Ball Return Type	Single Circuit
Number of Balls	63
Wiper Type	Rubber
Part Number	0215200051

Flanged Ball Nut – KGF-D (FK)

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	13.1 kN
Max. Static Load	20.2 kN
Torque to Raise 1 kN	0.885 Nm
Nut Weight	0.4 kg
Preload Classes ⁽²⁾	See order code on page 98
Standard max. Backlash	0.041 mm
Ball Return Type	Single Circuit Metal
Number of Balls	66
Wiper Type	Polymer
Part Number	0215200273

Flanged Ball Nut – FL

(can only be used with a P3 or P5 lead accuracy screw)

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	12.6 kN
Max. Static Load	19.1 kN
Torque to Raise 1 kN	
Nut Weight	
Preload Classes ⁽²⁾	
Standard max. Backlash (Z0)	
Ball Return Type	EUS
Number of Balls	
Wiper Type	
Part Number	Only available as screw assembly

(1) see foot note 1 on next page

(2) see foot note 2 on next page

Ø 25 x 5 mm – Metric Ball Screws – Rolled

Ball Screw

Nominal Ball Screw Diameter	25 mm
Nominal Ball Screw Lead	5 mm
Thread Direction	Right Hand
Number of Turns	1
Screw Material	CF53
Screw Weight	3.32 kg/m
Nominal Ball Diameter	3.5 mm
Lead Accuracy ⁽¹⁾ T7 Part Number	0205000253

Ball screws can be cut to the length you require. Specify ball screw part number and overall length at time of order

Cylindrical Ball Nut – KGM-N

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	12.3 kN
Max. Static Load	22.5 kN
Torque to Raise 1 kN	0.885 Nm
Nut Weight	0,150 kg
Preload Classes ⁽²⁾	See order code on page 98
Standard max. Backlash (Z0)	0.041 mm
Ball Return Type	End Cap
Number of Balls	63
Wiper Type	Rubber
Part Number	0215050113

Cylindrical Ball Nut – KGM-D

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	12.3 kN
Max. Static Load	22.5 kN
Torque to Raise 1 kN	0.885 Nm
Nut Weight	0.2 kg
Preload Classes ⁽²⁾	See order code on page 98
Standard max. Backlash	0.090 mm
Ball Return Type	Single Circuit
Number of Balls	63
Wiper Type	Rubber
Part Number	0215050114

Threaded Ball Nut – KGM-G

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	20.4 kN
Max. Static Load	33.7 kN
Torque to Raise 1 kN	0.885 Nm
Nut Weight	0.2 kg
Preload Classes ⁽²⁾	See order code on page 98
Standard max. Backlash	0.090 mm
Ball Return Type	Single Circuit
Number of Balls	110
Wiper Type	Polymer
Part Number	0215050309

(1) P3 = 12 µm / 300 mm, P5 = 23 µm / 300 mm, T5 = 23 µm / 300 mm, T7 = 52 µm / 300 mm

(2) Please ask Thomson Customer Service for available preload options

Note: Dimensional information for all End Journals and Bearing Supports is available on page 87 – 97. Information on required lubrication is on page 114..

Ø 25 x 10 mm – Metric Ball Screws – Rolled

Ball Screw

Nominal Ball Screw Diameter	25 mm
Nominal Ball Screw Lead	10 mm
Thread Direction	Right Hand
Number of Turns	2
Screw Material	CF53
Screw Weight	3.34 kg/m
Nominal Ball Diameter	3.5 mm
Lead Accuracy ⁽¹⁾ T7 Part Number	0220144

Ball screws can be cut to the length you require. Specify ball screw part number and overall length at time of order

Flanged Ball Nut – KGF-D

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	13.2 kN
Max. Static Load	25.3 kN
Torque to Raise 1 kN	1.77 Nm
Nut Weight	0.5 kg
Preload Classes ⁽²⁾	See order code on page 98
Standard max. Backlash	0.041 mm
Ball Return Type	Channel
Number of Balls	75
Wiper Type	Rubber
Part Number	0215200175

Flanged Ball Nut – KGF-D (FH)

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	24.7 kN
Max. Static Load	53.4 kN
Torque to Raise 1 kN	1.77 Nm
Nut Weight	0.5 kg
Preload Classes ⁽²⁾	See order code on page 98
Standard max. Backlash	0.041 mm
Ball Return Type	End Cap
Number of Balls	164
Wiper Type	Polymer
Part Number	0215200243

(1) P3 = 12 µm / 300 mm, P5 = 23 µm / 300 mm, T5 = 23 µm / 300 mm, T7 = 52 µm / 300 mm

(2) Please ask Thomson Customer Service for available preload options

Note: Dimensional information for all End Journals and Bearing Supports is available on page 87 – 97. Information on required lubrication is on page 114.

Ø 25 x 10 mm – Metric Ball Screws – Rolled

Ball Screw

Nominal Ball Screw Diameter	25 mm
Nominal Ball Screw Lead	10 mm
Thread Direction	Right Hand
Number of Turns	2
Screw Material	CF53
Screw Weight	3.34 kg/m
Nominal Ball Diameter	3.5 mm
Lead Accuracy ⁽¹⁾ T7 Part Number	0220144

Ball screws can be cut to the length you require. Specify ball screw part number and overall length at time of order

Cylindrical Ball Nut – KGM-D

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	13.2 kN
Max. Static Load	25.3 kN
Torque to Raise 1 kN	1.77 Nm
Nut Weight	0.24 kg
Preload Classes ⁽²⁾	See order code on page 98
Standard max. Backlash	0.041 mm
Ball Return Type	Channel
Number of Balls	75
Wiper Type	Rubber
Part Number	0215050245

Threaded Ball Nut – KGM-G

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	19.9 kN
Max. Static Load	31.8 kN
Torque to Raise 1 kN	1.77 Nm
Nut Weight	0.4 kg
Preload Classes ⁽²⁾	See order code on page 98
Standard max. Backlash	0.041 mm
Ball Return Type	Multi Circuit
Number of Balls	55
Wiper Type	Polymer
Part Number	0215050317

(1) P3 = 12 µm / 300 mm, P5 = 23 µm / 300 mm, T5 = 23 µm / 300 mm, T7 = 52 µm / 300 mm

(2) Please ask Thomson Customer Service for available preload options

Note: Dimensional information for all End Journals and Bearing Supports is available on page 87 – 97. Information on required lubrication is on page 114..

Ø 25 x 20 mm – Metric Ball Screws – Rolled

Ball Screw

Nominal Ball Screw Diameter	25 mm
Nominal Ball Screw Lead	20 mm
Thread Direction	Right Hand
Number of Turns	4
Screw Material	CF53
Screw Weight	3.32 kg/m
Nominal Ball Diameter	3.5 mm
Lead Accuracy ⁽¹⁾ T7 Part Number	0220319

Ball screws can be cut to the length you require. Specify ball screw part number and overall length at time of order

Flanged Ball Nut – KGF-D

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	13.0 kN
Max. Static Load	23.3 kN
Torque to Raise 1 kN	3.54 Nm
Nut Weight	0.3 kg
Preload Classes ⁽²⁾	See order code on page 98
Standard max. Backlash	0.041 mm
Ball Return Type	End Cap
Number of Balls	80
Wiper Type	Rubber
Part Number	0215200200

(1) P3 = 12 µm / 300 mm, P5 = 23 µm / 300 mm, T5 = 23 µm / 300 mm, T7 = 52 µm / 300 mm

(2) Please ask Thomson Customer Service for available preload options

Note: Dimensional information for all End Journals and Bearing Supports is available on page 87 – 97. Information on required lubrication is on page 114.

Ø 25 x 20 mm – Metric Ball Screws – Rolled

Ball Screw

Nominal Ball Screw Diameter	25 mm
Nominal Ball Screw Lead	20 mm
Thread Direction	Right Hand
Number of Turns	4
Screw Material	CF53
Screw Weight	3.32 kg/m
Nominal Ball Diameter	3.5 mm
Lead Accuracy ⁽¹⁾ T7 Part Number	0220319

Ball screws can be cut to the length you require. Specify ball screw part number and overall length at time of order

Cylindrical Ball Nut – KGM-D

DIN 69051 Compliance

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	13.0 kN
Max. Static Load	23.3 kN
Torque to Raise 1 kN	3.54 Nm
Nut Weight	0.2 kg
Preload Classes ⁽²⁾	See order code on page 98
Standard max. Backlash	0.041 mm
Ball Return Type	End Cap
Number of Balls	80
Wiper Type	Rubber
Part Number	0215050268

(1) P3 = 12 µm / 300 mm, P5 = 23 µm / 300 mm, T5 = 23 µm / 300 mm, T7 = 52 µm / 300 mm

(2) Please ask Thomson Customer Service for available preload options

Note: Dimensional information for all End Journals and Bearing Supports is available on page 87 – 97. Information on required lubrication is on page 114..

Ø 25 x 25 mm – Metric Ball Screws – Rolled

Ball Screw

Nominal Ball Screw Diameter	25 mm
Nominal Ball Screw Lead	25 mm
Thread Direction	Right Hand
Number of Turns	5
Screw Material	CF53
Screw Weight	3.4 kg/m
Nominal Ball Diameter	3.5 mm
Lead Accuracy ⁽¹⁾ T7 Part Number	0220255

Ball screws can be cut to the length you require. Specify ball screw part number and overall length at time of order

Flanged Ball Nut – KGF-D

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	16.7 kN
Max. Static Load	32.2 kN
Torque to Raise 1 kN	4.43 Nm
Nut Weight	0.7 kg
Preload Classes ⁽²⁾	See order code on page 98
Standard max. Backlash	0.041 mm
Ball Return Type	End Cap
Number of Balls	130
Wiper Type	Rubber
Part Number	0215200201

(1) P3 = 12 µm / 300 mm, P5 = 23 µm / 300 mm, T5 = 23 µm / 300 mm, T7 = 52 µm / 300 mm

(2) Please ask Thomson Customer Service for available preload options

Note: Dimensional information for all End Journals and Bearing Supports is available on page 87 – 97. Information on required lubrication is on page 114.

Ø 25 x 25 mm – Metric Ball Screws – Rolled

Ball Screw

Nominal Ball Screw Diameter	25 mm
Nominal Ball Screw Lead	25 mm
Thread Direction	Right Hand
Number of Turns	5
Screw Material	CF53
Screw Weight	3.4 kg/m
Nominal Ball Diameter	3.5 mm
Lead Accuracy ⁽¹⁾ T7 Part Number	0220255

Ball screws can be cut to the length you require. Specify ball screw part number and overall length at time of order

Cylindrical Ball Nut – KGM-D

DIN 69051 Compliance

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	16.7 kN
Max. Static Load	32.2 kN
Torque to Raise 1 kN	4.43 Nm
Nut Weight	0.5 kg
Preload Classes ⁽²⁾	See order code on page 98
Standard max. Backlash	0.041 mm
Ball Return Type	End Cap
Number of Balls	130
Wiper Type	Rubber
Part Number	0215050252

(1) P3 = 12 µm / 300 mm, P5 = 23 µm / 300 mm, T5 = 23 µm / 300 mm, T7 = 52 µm / 300 mm

(2) Please ask Thomson Customer Service for available preload options

Note: Dimensional information for all End Journals and Bearing Supports is available on page 87 – 97. Information on required lubrication is on page 114..

Ø 25 x 50 mm – Metric Ball Screws – Rolled

Ball Screw

Nominal Ball Screw Diameter	25 mm
Nominal Ball Screw Lead	50 mm
Thread Direction	Right Hand
Number of Turns	5
Screw Material	CF53
Screw Weight	3.37 kg/m
Nominal Ball Diameter	3.5 mm
Lead Accuracy ⁽¹⁾ T7 Part Number	0220322

Ball screws can be cut to the length you require. Specify ball screw part number and overall length at time of order

Flanged Ball Nut – KGF-D

DIN 69051 Compliance

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	15.4 kN
Max. Static Load	31.7 kN
Torque to Raise 1 kN	8.85 Nm
Nut Weight	0.4 kg
Preload Classes ⁽²⁾	See order code on page 98
Standard max. Backlash	0.041 mm
Ball Return Type	End Cap
Number of Balls	130
Wiper Type	Rubber
Part Number	0215200195

(1) P3 = 12 µm / 300 mm, P5 = 23 µm / 300 mm, T5 = 23 µm / 300 mm, T7 = 52 µm / 300 mm

(2) Please ask Thomson Customer Service for available preload options

Note: Dimensional information for all End Journals and Bearing Supports is available on page 87 – 97. Information on required lubrication is on page 114.

Ø 25 x 50 mm – Metric Ball Screws – Rolled

Ball Screw

Nominal Ball Screw Diameter	25 mm
Nominal Ball Screw Lead	50 mm
Thread Direction	Right Hand
Number of Turns	5
Screw Material	CF53
Screw Weight	3.37 kg/m
Nominal Ball Diameter	3.5 mm
Lead Accuracy ⁽¹⁾ T7 Part Number	0220322

Ball screws can be cut to the length you require. Specify ball screw part number and overall length at time of order

Cylindrical Ball Nut – KGM-D

DIN 69051 Compliance

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	15.4 kN
Max. Static Load	31.7 kN
Torque to Raise 1 kN	8.85 Nm
Nut Weight	0.3 kg
Preload Classes ⁽²⁾	See order code on page 98
Standard max. Backlash	0.041 mm
Ball Return Type	End Cap
Number of Balls	130
Wiper Type	Rubber
Part Number	0215050263

(1) P3 = 12 µm / 300 mm, P5 = 23 µm / 300 mm, T5 = 23 µm / 300 mm, T7 = 52 µm / 300 mm

(2) Please ask Thomson Customer Service for available preload options

Note: Dimensional information for all End Journals and Bearing Supports is available on page 87 – 97. Information on required lubrication is on page 114..

Ø 32 x 5 mm – Metric Ball Screws – Rolled

Ball Screw

Nominal Ball Screw Diameter	32 mm
Nominal Ball Screw Lead	5 mm
Thread Direction	Right Hand
Number of Turns	1
Screw Material	CF53
Screw Weight	5.9 kg/m
Nominal Ball Diameter	3.5 mm
Lead Accuracy ⁽¹⁾ T7 Part Number	0220019

Ball screws can be cut to the length you require. Specify ball screw part number and overall length at time of order

Flanged Ball Nut – KGF-D

DIN 69051 Compliance

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	21.5 kN
Max. Static Load	49.3 kN
Torque to Raise 1 kN	0.885 Nm
Nut Weight	0.6 kg
Preload Classes ⁽²⁾	See order code on page 98
Standard max. Backlash	0.041 mm
Ball Return Type	Single Circuit
Number of Balls	140
Wiper Type	Rubber
Part Number	0215200054

Flanged Ball Nut – KGF-D (FK)

DIN 69051 Compliance

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	19.3 kN
Max. Static Load	36.3 kN
Torque to Raise 1 kN	0.885 Nm
Nut Weight	0.7 kg
Preload Classes ⁽²⁾	See order code on page 98
Standard max. Backlash	0.041 mm
Ball Return Type	Single Circuit Metal
Number of Balls	116
Wiper Type	Polymer
Part Number	0215200275

Flanged Ball Nut – FL

(can only be used with a P3 or P5 lead accuracy screw)

Thread Direction	Right Hand
Nut Material	
Dynamic Load	19.3 kN
Max. Static Load	36.4 kN
Torque to Raise 1 kN	
Nut Weight	
Preload Classes ⁽²⁾	
Standard max. Backlash (Z0)	
Ball Return Type	EUS
Number of Balls	
Wiper Type	
Part Number	

(1) see foot note 1 on next page

(2) see foot note 2 on next page

Ø 32 x 5 mm – Metric Ball Screws – Rolled

Ball Screw

Nominal Ball Screw Diameter	32 mm
Nominal Ball Screw Lead	5 mm
Thread Direction	Right Hand
Number of Turns	1
Screw Material	CF53
Screw Weight	5.9 kg/m
Nominal Ball Diameter	3.5 mm
Lead Accuracy ⁽¹⁾ T7 Part Number	0220019

Ball screws can be cut to the length you require. Specify ball screw part number and overall length at time of order

Cylindrical Ball Nut – KGM-D

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	21.5 kN
Max. Static Load	49.3 kN
Torque to Raise 1 kN	0.885 Nm
Nut Weight	0.5 kg
Preload Classes ⁽²⁾	See order code on page 98
Standard max. Backlash	0.041 mm
Ball Return Type	Single Circuit
Number of Balls	140
Wiper Type	Rubber
Part Number	0215050118

Threaded Ball Nut – KGM-G

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	23.3 kN
Max. Static Load	45.5 kN
Torque to Raise 1 kN	0.885 Nm
Nut Weight	0.6 kg
Preload Classes ⁽²⁾	See order code on page 98
Standard max. Backlash	0.041 mm
Ball Return Type	Single Circuit
Number of Balls	145
Wiper Type	Polymer
Part Number	0215050311

(1) P3 = 12 µm / 300 mm, P5 = 23 µm / 300 mm, T5 = 23 µm / 300 mm, T7 = 52 µm / 300 mm

(2) Please ask Thomson Customer Service for available preload options

Note: Dimensional information for all End Journals and Bearing Supports is available on page 87 – 97. Information on required lubrication is on page 114..

Ø 32 x 10 mm – Metric Ball Screws – Rolled

Ball Screw

Nominal Ball Screw Diameter	32 mm
Nominal Ball Screw Lead	10 mm
Thread Direction	Right Hand
Number of Turns	1
Screw Material	CF53
Screw Weight	5.56 kg/m
Nominal Ball Diameter	7.144 mm
Lead Accuracy ⁽¹⁾ T7 Part Number	0220022

Ball screws can be cut to the length you require. Specify ball screw part number and overall length at time of order

Flanged Ball Nut – KGF-D

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	33.4 kN
Max. Static Load	54.5 kN
Torque to Raise 1 kN	1.77 Nm
Nut Weight	0.9 kg
Preload Classes ⁽²⁾	See order code on page 98
Standard max. Backlash	0.084 mm
Ball Return Type	Single Circuit
Number of Balls	54
Wiper Type	Rubber
Part Number	0215200087

Flanged Ball Nut – KGF-N

DIN 69051 Compliance

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	33.4 kN
Max. Static Load	54.5 kN
Torque to Raise 1 N	1.77 Nm
Nut Weight	0.9 kg
Preload Classes ⁽²⁾	See order code on page 98
Standard max. Backlash	0.084 mm
Ball Return Type	Single Circuit Metal
Number of Balls	54
Wiper Type	Rubber
Part Number	0215200075

(1) P3 = 12 µm / 300 mm, P5 = 23 µm / 300 mm, T5 = 23 µm / 300 mm, T7 = 52 µm / 300 mm

(2) Please ask Thomson Customer Service for available preload options

Ø 32 x 10 mm – Metric Ball Screws – Rolled

Ball Screw

Nominal Ball Screw Diameter	32 mm
Nominal Ball Screw Lead	10 mm
Thread Direction	Right Hand
Number of Turns	1
Screw Material	CF53
Screw Weight	5.56 kg/m
Nominal Ball Diameter	7.144 mm
Lead Accuracy ⁽¹⁾ T7 Part Number	0220022

Ball screws can be cut to the length you require. Specify ball screw part number and overall length at time of order

Cylindrical Ball Nut – KGM-N

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	33.4 kN
Max. Static Load	54.5 kN
Torque to Raise 1 kN	1.77 Nm
Nut Weight	0.6 kg
Preload Classes ⁽²⁾	See order code on page 98
Standard max. Backlash	0.084 mm
Ball Return Type	Single Circuit Polymer
Number of Balls	42
Wiper Type	Rubber
Part Number	0215050107

(1) P3 = 12 µm / 300 mm, P5 = 23 µm / 300 mm, T5 = 23 µm / 300 mm, T7 = 52 µm / 300 mm

(2) Please ask Thomson Customer Service for available preload options

Note: Dimensional information for all End Journals and Bearing Supports is available on page 87 – 97. Information on required lubrication is on page 114..

Ø 32 x 20 mm – Metric Ball Screws – Rolled

Ball Screw

Nominal Ball Screw Diameter	32 mm
Nominal Ball Screw Lead	20 mm
Thread Direction	Right Hand
Number of Turns	2
Screw Material	CF53
Screw Weight	5.60 kg/m
Nominal Ball Diameter	5.000 mm
Lead Accuracy ⁽¹⁾ T7 Part Number	0220245

Ball screws can be cut to the length you require. Specify ball screw part number and overall length at time of order

Flanged Ball Nut – KGF-D

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	29.7 kN
Max. Static Load	59.8 kN
Torque to Raise 1 kN	1.77 Nm
Nut Weight	0.9 kg
Preload Classes ⁽²⁾	See order code on page 98
Standard max. Backlash	0.059 mm
Ball Return Type	Channel
Number of Balls	84
Wiper Type	Rubber
Part Number	0215200191

(1) P3 = 12 µm / 300 mm, P5 = 23 µm / 300 mm, T5 = 23 µm / 300 mm, T7 = 52 µm / 300 mm

(2) Please ask Thomson Customer Service for available preload options

Note: Dimensional information for all End Journals and Bearing Supports is available on page 87 – 97. Information on required lubrication is on page 114.

Ø 32 x 20 mm – Metric Ball Screws – Rolled

Ball Screw

Nominal Ball Screw Diameter	32 mm
Nominal Ball Screw Lead	20 mm
Thread Direction	Right Hand
Number of Turns	2
Screw Material	CF53
Screw Weight	5.60 kg/m
Nominal Ball Diameter	5.000 mm
Lead Accuracy ⁽¹⁾ T7 Part Number	0220245

Ball screws can be cut to the length you require. Specify ball screw part number and overall length at time of order

Cylindrical Ball Nut – KGM-N

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	29.7 kN
Max. Static Load	59.8 kN
Torque to Raise 1 kN	1.77 Nm
Nut Weight	0.6 kg
Preload Classes ⁽²⁾	See order code on page 98
Standard max. Backlash	0.059 mm
Ball Return Type	Channel
Number of Balls	84
Wiper Type	Rubber
Part Number	0215050255

(1) P3 = 12 µm / 300 mm, P5 = 23 µm / 300 mm, T5 = 23 µm / 300 mm, T7 = 52 µm / 300 mm

(2) Please ask Thomson Customer Service for available preload options

Note: Dimensional information for all End Journals and Bearing Supports is available on page 87 – 97. Information on required lubrication is on page 114..

Ø 32 x 32 mm – Metric Ball Screws – Rolled

Ball Screw

Nominal Ball Screw Diameter	32 mm
Nominal Ball Screw Lead	32 mm
Thread Direction	Right Hand
Number of Turns	4
Screw Material	CF53
Screw Weight	5.74 kg/m
Nominal Ball Diameter	3.969 mm
Lead Accuracy ⁽¹⁾ T7 Part Number	0205000214

Ball screws can be cut to the length you require. Specify ball screw part number and overall length at time of order

Flanged Ball Nut – KGF-D

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	19.7 kN
Max. Static Load	37.4 kN
Torque to Raise 1 kN	5.66 Nm
Nut Weight	0.8 kg
Preload Classes ⁽²⁾	See order code on page 98
Standard max. Backlash	0.047 mm
Ball Return Type	End Cap
Number of Balls	124
Wiper Type	Rubber
Part Number	0215200235

Flanged Ball Nut – KGF-D (FH)

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	19.7 kN
Max. Static Load	39.0 kN
Torque to Raise 1 kN	5.66 Nm
Nut Weight	0.8 kg
Preload Classes ⁽²⁾	See order code on page 98
Standard max. Backlash	0.047 mm
Ball Return Type	End Cap
Number of Balls	124
Wiper Type	Polymer
Part Number	0215200232

(1) P3 = 12 µm / 300 mm, P5 = 23 µm / 300 mm, T5 = 23 µm / 300 mm, T7 = 52 µm / 300 mm

(2) Please ask Thomson Customer Service for available preload options

Note: Dimensional information for all End Journals and Bearing Supports is available on page 87 – 97. Information on required lubrication is on page 114.

Ø 32 x 40 mm – Metric Ball Screws – Rolled

Ball Screw

Nominal Ball Screw Diameter	32 mm
Nominal Ball Screw Lead	40 mm
Thread Direction	Right Hand
Number of Turns	4
Screw Material	CF53
Screw Weight	5.63 kg/m
Nominal Ball Diameter	3.5 mm
Lead Accuracy ⁽¹⁾ T7 Part Number	0220041

Ball screws can be cut to the length you require. Specify ball screw part number and overall length at time of order

Flanged Ball Nut – KGF-N

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	14.9 kN
Max. Static Load	32.4 kN
Torque to Raise 1 kN	7.08 Nm
Nut Weight	0.5 kg
Preload Classes ⁽²⁾	See order code on page 98
Standard max. Backlash	0.041 mm
Ball Return Type	End Cap
Number of Balls	168
Wiper Type	Rubber
Part Number	0215200210

Cylindrical Ball Nut – KGM-N

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	14.9 kN
Max. Static Load	32.4 kN
Torque to Raise 1 kN	7.08 Nm
Nut Weight	0.46 kg
Preload Classes ⁽²⁾	See order code on page 98
Standard max. Backlash	0.041 mm
Ball Return Type	End Cap
Number of Balls	168
Wiper Type	Rubber
Part Number	0215050275

(1) P3 = 12 µm / 300 mm, P5 = 23 µm / 300 mm, T5 = 23 µm / 300 mm, T7 = 52 µm / 300 mm

(2) Please ask Thomson Customer Service for available preload options

Note: Dimensional information for all End Journals and Bearing Supports is available on page 87 – 97. Information on required lubrication is on page 114..

Ø 40 x 5 mm – Metric Ball Screws – Rolled

Ball Screw

Nominal Ball Screw Diameter	40 mm
Nominal Ball Screw Lead	5 mm
Thread Direction	Right Hand
Number of Turns	1
Screw Material	CF53
Screw Weight	9.03 kg/m
Nominal Ball Diameter	3.5 mm
Lead Accuracy ⁽¹⁾ T7 Part Number	0205000214

Ball screws can be cut to the length you require. Specify ball screw part number and overall length at time of order

Flanged Ball Nut – KGF-D

DIN 69051 Compliance

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	23.8 kN
Max. Static Load	63.1 kN
Torque to Raise 1 kN	0.885 Nm
Nut Weight	0.7 kg
Preload Classes ⁽²⁾	See order code on page 98
Standard max. Backlash	0.041 mm
Ball Return Type	Single Circuit
Number of Balls	180
Wiper Type	Rubber
Part Number	0215200056

Flanged Ball Nut – KGF-D (FK)

DIN 69051 Compliance

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	26.3 kN
Max. Static Load	59.2 kN
Torque to Raise 1 kN	0.885 Nm
Nut Weight	1.2 kg
Preload Classes ⁽²⁾	See order code on page 98
Standard max. Backlash	0.041 mm
Ball Return Type	EUS
Number of Balls	180
Wiper Type	Polymer
Part Number	0215200277

Flanged Ball Nut – FL

(can only be used with a P3 or P5 lead accuracy screw)

Thread Direction	Right Hand
Nut Material	
Dynamic Load	26.3 kN
Max. Static Load	59.2 kN
Torque to Raise 1 kN	
Nut Weight	
Preload Classes ⁽²⁾	
Standard max. Backlash (Z0)	
Ball Return Type	EUS
Number of Balls	
Wiper Type	Polymer
Part Number	

(1) see foot note 1 on next page

(2) see foot note 2 on next page

Ø 40 x 5 mm – Metric Ball Screws – Rolled

Ball Screw

Nominal Ball Screw Diameter	40 mm
Nominal Ball Screw Lead	5 mm
Thread Direction	Right Hand
Number of Turns	1
Screw Material	CF53
Screw Weight	9.03 kg/m
Nominal Ball Diameter	3.5 mm
Lead Accuracy ⁽¹⁾ T7 Part Number	0205000214

Ball screws can be cut to the length you require. Specify ball screw part number and overall length at time of order

Cylindrical Ball Nut – KGM-D

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	21.5 kN
Max. Static Load	49.3 kN
Torque to Raise 1 kN	0.885 Nm
Nut Weight	0.8 kg
Preload Classes ⁽²⁾	See order code on page 98
Standard max. Backlash	0.041 mm
Ball Return Type	Single Circuit
Number of Balls	180
Wiper Type	Rubber
Part Number	0215200210

Threaded Ball Nut – KGM-G

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	26.3 kN
Max. Static Load	59.2 kN
Torque to Raise 1 kN	0.885 Nm
Nut Weight	0.6 kg
Preload Classes ⁽²⁾	See order code on page 98
Standard max. Backlash	0.041 mm
Ball Return Type	Single Circuit
Number of Balls	180
Wiper Type	Polymer
Part Number	0215050275

(1) P3 = 12 µm / 300 mm, P5 = 23 µm / 300 mm, T5 = 23 µm / 300 mm, T7 = 52 µm / 300 mm

(2) Please ask Thomson Customer Service for available preload options

Note: Dimensional information for all End Journals and Bearing Supports is available on page 87 – 97. Information on required lubrication is on page 114..

Ø 40 x 10 mm – Metric Ball Screws – Rolled

Ball Screw

Nominal Ball Screw Diameter	40 mm
Nominal Ball Screw Lead	10 mm
Thread Direction	Right Hand
Number of Turns	1
Screw Material	CF53
Screw Weight	8.43 kg/m
Nominal Ball Diameter	7.144 mm
Lead Accuracy ⁽¹⁾ T7 Part Number	0205000228

Ball screws can be cut to the length you require. Specify ball screw part number and overall length at time of order

Flanged Ball Nut – KGF-D

DIN 69051 Compliance

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	38.0 kN
Max. Static Load	69.2 kN
Torque to Raise 1 kN	1.77 Nm
Nut Weight	1.2 kg
Preload Classes ⁽²⁾	See order code on page 98
Standard max. Backlash	0.084 mm
Ball Return Type	Single Circuit
Number of Balls	54
Wiper Type	Rubber
Part Number	0215200356

Flanged Ball Nut – KGF-D (FK)

DIN 69051 Compliance

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	64.9 kN
Max. Static Load	109.0 kN
Torque to Raise 1 kN	1.77 Nm
Nut Weight	1.4 kg
Preload Classes ⁽²⁾	See order code on page 98
Standard max. Backlash	0.084 mm
Ball Return Type	Single Circuit Metal
Number of Balls	72
Wiper Type	Polymer
Part Number	0215200320

Flanged Ball Nut – FL

(can only be used with a P3 or P5 lead accuracy screw)

Thread Direction	Right Hand
Nut Material	
Dynamic Load	64.9 kN
Max. Static Load	109.0 kN
Torque to Raise 1 kN	
Nut Weight	
Preload Classes ⁽²⁾	
Standard max. Backlash (Z0)	
Ball Return Type	EUS
Number of Balls	
Wiper Type	Polymer
Part Number	

(1) see foot note 1 on next page

(2) see foot note 2 on next page

Ø 40 x 10 mm – Metric Ball Screws – Rolled

Ball Screw

Nominal Ball Screw Diameter	40 mm
Nominal Ball Screw Lead	10 mm
Thread Direction	Right Hand
Number of Turns	1
Screw Material	CF53
Screw Weight	8.43 kg/m
Nominal Ball Diameter	7.144 mm
Lead Accuracy ⁽¹⁾ T7 Part Number	0205000228

Ball screws can be cut to the length you require. Specify ball screw part number and overall length at time of order

Cylindrical Ball Nut – KGM-D

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	38.0 kN
Max. Static Load	69.1 kN
Torque to Raise 1 kN	1.77 Nm
Nut Weight	1.0 kg
Preload Classes ⁽²⁾	See order code on page 98
Standard max. Backlash	0.084 mm
Ball Return Type	Single Circuit
Number of Balls	54
Wiper Type	Rubber
Part Number	0215050366

Threaded Ball Nut – KGM-G

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	78.6 kN
Max. Static Load	136.2 kN
Torque to Raise 1 kN	1.77 Nm
Nut Weight	1.3 kg
Preload Classes ⁽²⁾	See order code on page 98
Standard max. Backlash	0.084 mm
Ball Return Type	Single Circuit
Number of Balls	90
Wiper Type	Polymer
Part Number	0215050333

(1) P3 = 12 µm / 300 mm, P5 = 23 µm / 300 mm, T5 = 23 µm / 300 mm, T7 = 52 µm / 300 mm

(2) Please ask Thomson Customer Service for available preload options

Note: Dimensional information for all End Journals and Bearing Supports is available on page 87 – 97. Information on required lubrication is on page 114..

Ø 40 x 20 mm – Metric Ball Screws – Rolled

Ball Screw

Nominal Ball Screw Diameter	40 mm
Nominal Ball Screw Lead	20 mm
Thread Direction	Right Hand
Number of Turns	2
Screw Material	CF53
Screw Weight	9.0 kg/m
Nominal Ball Diameter	5.0 mm
Lead Accuracy ⁽¹⁾ T7 Part Number	0220247

Ball screws can be cut to the length you require. Specify ball screw part number and overall length at time of order

Flanged Ball Nut – KGF-D

DIN 69051 Compliance

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	33.3 kN
Max. Static Load	76.1 kN
Torque to Raise 1 kN	3.54 Nm
Nut Weight	1.5 kg
Preload Classes ⁽²⁾	See order code on page 98
Standard max. Backlash	0.059 mm
Ball Return Type	Channel
Number of Balls	104
Wiper Type	Rubber
Part Number	0215200206

Cylindrical Ball Nut – KGM-D

DIN 69051 Compliance

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	33.3 kN
Max. Static Load	76.1 kN
Torque to Raise 1 kN	3.54 Nm
Nut Weight	1.2 kg
Preload Classes ⁽²⁾	See order code on page 98
Standard max. Backlash	0.059 mm
Ball Return Type	Channel
Number of Balls	102
Wiper Type	Rubber
Part Number	0215050270

(1) P3 = 12 µm / 300 mm, P5 = 23 µm / 300 mm, T5 = 23 µm / 300 mm, T7 = 52 µm / 300 mm

(2) Please ask Thomson Customer Service for available preload options

Note: Dimensional information for all End Journals and Bearing Supports is available on page 87 – 97. Information on required lubrication is on page 114.

Ø 40 x 40 mm – Metric Ball Screws – Rolled

Ball Screw

Nominal Ball Screw Diameter	40 mm
Nominal Ball Screw Lead	40 mm
Thread Direction	Right Hand
Number of Turns	4
Screw Material	CF53
Screw Weight	9.0 kg/m
Nominal Ball Diameter	3.5 mm
Lead Accuracy ⁽¹⁾ T7 Part Number	0220264

Ball screws can be cut to the length you require. Specify ball screw part number and overall length at time of order

Flanged Ball Nut – KGF-D

DIN 69051 Compliance

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	35.0 kN
Max. Static Load	101.9 kN
Torque to Raise 1 kN	7.08 Nm
Nut Weight	1.2 kg
Preload Classes ⁽²⁾	See order code on page 98
Standard max. Backlash	0.041 mm
Ball Return Type	End Cap
Number of Balls	360
Wiper Type	Rubber
Part Number	0215200199

Cylindrical Ball Nut – KGM-D

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	35.0 kN
Max. Static Load	101.9 kN
Torque to Raise 1 kN	7.08 Nm
Nut Weight	0.9 kg
Preload Classes ⁽²⁾	See order code on page 98
Standard max. Backlash	0.041 mm
Ball Return Type	End Cap
Number of Balls	380
Wiper Type	Rubber
Part Number	0215050276

(1) P3 = 12 µm / 300 mm, P5 = 23 µm / 300 mm, T5 = 23 µm / 300 mm, T7 = 52 µm / 300 mm

(2) Please ask Thomson Customer Service for available preload options

Note: Dimensional information for all End Journals and Bearing Supports is available on page 87 – 97. Information on required lubrication is on page 114..

Ø 50 x 10 mm – Metric Ball Screws – Rolled

Ball Screw

Nominal Ball Screw Diameter	50 mm
Nominal Ball Screw Lead	10 mm
Thread Direction	Right Hand
Number of Turns	1
Screw Material	CF53
Screw Weight	13.5 kg/m
Nominal Ball Diameter	7.144 mm
Lead Accuracy ⁽¹⁾ T7 Part Number	0220031

Ball screws can be cut to the length you require. Specify ball screw part number and overall length at time of order

Flanged Ball Nut – KGF-D

DIN 69051 Compliance

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	68.7 kN
Max. Static Load	155.8 kN
Torque to Raise 1 kN	1.77 Nm
Nut Weight	2.0 kg
Preload Classes ⁽²⁾	See order code on page 98
Standard max. Backlash	0.084 mm
Ball Return Type	Single Circuit
Number of Balls	115
Wiper Type	Rubber
Part Number	0215200074

Flanged Ball Nut – KGF-D (FK)

DIN 69051 Compliance

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	66.4 kN
Max. Static Load	134.3 kN
Torque to Raise 1 kN	1.77 Nm
Nut Weight	2.0 kg
Preload Classes ⁽²⁾	See order code on page 98
Standard max. Backlash	0.084 mm
Ball Return Type	Single Circuit Metal
Number of Balls	88
Wiper Type	Polymer
Part Number	0215200306

Flanged Ball Nut – FL

(can only be used with a P3 or P5 lead accuracy screw)

Thread Direction	Right Hand
Nut Material	
Dynamic Load	66.4 kN
Max. Static Load	134.3 kN
Torque to Raise 1 kN	
Nut Weight	
Preload Classes ⁽²⁾	
Standard max. Backlash (Z0)	
Ball Return Type	EUS
Number of Balls	
Wiper Type	
Part Number	

(1) see foot note 1 on next page

(2) see foot note 2 on next page

Ø 50 x 10 mm – Metric Ball Screws – Rolled

Ball Screw

Nominal Ball Screw Diameter	50 mm
Nominal Ball Screw Lead	10 mm
Thread Direction	Right Hand
Number of Turns	1
Screw Material	CF53
Screw Weight	13.5 kg/m
Nominal Ball Diameter	7.144 mm
Lead Accuracy ⁽¹⁾ T7 Part Number	0220031

Ball screws can be cut to the length you require. Specify ball screw part number and overall length at time of order

Cylindrical Ball Nut – KGM-D

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	68.7 kN
Max. Static Load	155.8 kN
Torque to Raise 1 kN	1.77 Nm
Nut Weight	0.9 kg
Preload Classes ⁽²⁾	See order code on page 98
Standard max. Backlash	0.084 mm
Ball Return Type	Single Circuit
Number of Balls	155
Wiper Type	Rubber
Part Number	0215050110

Threaded Ball Nut – KGM-G

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	97.8 kN
Max. Static Load	213.2 kN
Torque to Raise 1 kN	1.77 Nm
Nut Weight	2.0 kg
Preload Classes ⁽²⁾	See order code on page 98
Standard max. Backlash	0.084 mm
Ball Return Type	Single Circuit
Number of Balls	132
Wiper Type	Polymer
Part Number	0215050335

(1) P3 = 12 µm / 300 mm, P5 = 23 µm / 300 mm, T5 = 23 µm / 300 mm, T7 = 52 µm / 300 mm

(2) Please ask Thomson Customer Service for available preload options

Note: Dimensional information for all End Journals and Bearing Supports is available on page 87 – 97. Information on required lubrication is on page 114..

Ø 50 x 20 mm – Metric Ball Screws – Rolled

Ball Screw

Nominal Ball Screw Diameter	50 mm
Nominal Ball Screw Lead	20 mm
Thread Direction	Right Hand
Number of Turns	2
Screw Material	CF53
Screw Weight	13.4 kg/m
Nominal Ball Diameter	7.144 mm
Lead Accuracy ⁽¹⁾ T7 Part Number	0220249

Ball screws can be cut to the length you require. Specify ball screw part number and overall length at time of order

Flanged Ball Nut – KGF-D

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	60.0 kN
Max. Static Load	136.3 kN
Torque to Raise 1 kN	3.54 Nm
Nut Weight	2.5 kg
Preload Classes ⁽²⁾	See order code on page 98
Standard max. Backlash	0.084 mm
Ball Return Type	Channel
Number of Balls	100
Wiper Type	Rubber
Part Number	0215200212

Ø 50 x 20 mm – Metric Ball Screws – Rolled

Ball Screw

Nominal Ball Screw Diameter	50 mm
Nominal Ball Screw Lead	20 mm
Thread Direction	Right Hand
Number of Turns	2
Screw Material	CF53
Screw Weight	13.4 kg/m
Nominal Ball Diameter	7.144 mm
Lead Accuracy ⁽¹⁾ T7 Part Number	0220249

Ball screws can be cut to the length you require. Specify ball screw part number and overall length at time of order

Cylindrical Ball Nut – KGM-N

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	60.0 kN
Max. Static Load	136.3 kN
Torque to Raise 1 kN	3.54 Nm
Nut Weight	1.4 kg
Preload Classes ⁽²⁾	See order code on page 98
Standard max. Backlash	0.084 mm
Ball Return Type	Channel
Number of Balls	100
Wiper Type	Rubber
Part Number	0215050283

(1) P3 = 12 µm / 300 mm, P5 = 23 µm / 300 mm, T5 = 23 µm / 300 mm, T7 = 52 µm / 300 mm

(2) Please ask Thomson Customer Service for available preload options

Note: Dimensional information for all End Journals and Bearing Supports is available on page 87 – 97. Information on required lubrication is on page 114.

Ø 63 x 10 mm – Metric Ball Screws – Rolled

Ball Screw

Nominal Ball Screw Diameter	63 mm
Nominal Ball Screw Lead	10 mm
Thread Direction	Right Hand
Number of Turns	1
Screw Material	CF53
Screw Weight	22.0 kg/m
Nominal Ball Diameter	7.144 mm
Lead Accuracy ⁽¹⁾ T7 Part Number	0220034

Ball screws can be cut to the length you require. Specify ball screw part number and overall length at time of order

Flanged Ball Nut – KGF-D

DIN 69051 Compliance

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	76 kN
Max. Static Load	197 kN
Torque to Raise 1 kN	1.77 Nm
Nut Weight	2.0 kg
Preload Classes ⁽²⁾	See order code on page 98
Standard max. Backlash	0.084 mm
Ball Return Type	Single Circuit
Number of Balls	140
Wiper Type	Rubber
Part Number	0215200086

Flanged Ball Nut – KGF-D (FK)

DIN 69051 Compliance

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	93.8 kN
Max. Static Load	229.7 kN
Torque to Raise 1 kN	1.77 Nm
Nut Weight	2.0 kg
Preload Classes ⁽²⁾	See order code on page 98
Standard max. Backlash	0.084 mm
Ball Return Type	Single Circuit Metal
Number of Balls	140
Wiper Type	Polymer
Part Number	0215200279

Flanged Ball Nut – FL

(can only be used with a P3 or P5 lead accuracy screw)

Thread Direction	Right Hand
Nut Material	
Dynamic Load	93.8 kN
Max. Static Load	229.7 kN
Torque to Raise 1 kN	
Nut Weight	
Preload Classes ⁽²⁾	
Standard max. Backlash (Z0)	
Ball Return Type	EUS
Number of Balls	
Wiper Type	Polymer
Part Number	

(1) see foot note 1 on next page

(2) see foot note 2 on next page

Ø 63 x 10 mm – Metric Ball Screws – Rolled

Ball Screw

Nominal Ball Screw Diameter	63 mm
Nominal Ball Screw Lead	10 mm
Thread Direction	Right Hand
Number of Turns	1
Screw Material	CF53
Screw Weight	22.0 kg/m
Nominal Ball Diameter	7.144 mm
Lead Accuracy ⁽¹⁾ T7 Part Number	0220034

Ball screws can be cut to the length you require. Specify ball screw part number and overall length at time of order

Cylindrical Ball Nut – KGM-D

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	68.7 kN
Max. Static Load	155.8 kN
Torque to Raise 1 kN	1.77 Nm
Nut Weight	0.9 kg
Preload Classes ⁽²⁾	See order code on page 98
Standard max. Backlash	0.084 mm
Ball Return Type	Single Circuit
Number of Balls	140
Wiper Type	Rubber
Part Number	0215050109

Threaded Ball Nut – KGM-G

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	109.7 kN
Max. Static Load	213.2 kN
Torque to Raise 1 kN	1.77 Nm
Nut Weight	2.0 kg
Preload Classes ⁽²⁾	See order code on page 98
Standard max. Backlash	0.084 mm
Ball Return Type	Single Circuit
Number of Balls	168
Wiper Type	Polymer
Part Number	0215050337

(1) P3 = 12 µm / 300 mm, P5 = 23 µm / 300 mm, T5 = 23 µm / 300 mm, T7 = 52 µm / 300 mm

(2) Please ask Thomson Customer Service for available preload options

Note: Dimensional information for all End Journals and Bearing Supports is available on page 87 – 97. Information on required lubrication is on page 114..

Ø 63 x 20 mm – Metric Ball Screws – Rolled

Ball Screw

Nominal Ball Screw Diameter	63 mm
Nominal Ball Screw Lead	20 mm
Thread Direction	Right Hand
Number of Turns	2
Screw Material	CF53
Screw Weight	22 kg/m
Nominal Ball Diameter	7.14 mm
Lead Accuracy ⁽¹⁾ T7 Part Number	0205000236

Ball screws can be cut to the length you require. Specify ball screw part number and overall length at time of order

Flanged Ball Nut KGF-D

DIN 69051 Compliance

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	78.4 kN
Max. Static Load	173.4 kN
Torque to Raise 1 kN	3.54 Nm
Nut Weight	2.95 kg
Preload Classes ⁽²⁾	See order code on page 98
Standard max. Backlash	0.084 mm
Ball Return Type	Single Circuit Polymer
Number of Balls	96
Wiper Type	Rubber
Part Number	0215200240

Flanged Ball Nut – KGF-D (FH)

DIN 69051 Compliance

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	103.1 kN
Max. Static Load	270.8 kN
Torque to Raise 1 kN	3.54 Nm
Nut Weight	3.8 kg/m
Preload Classes ⁽²⁾	See order code on page 98
Standard max. Backlash	0.084 mm
Ball Return Type	End Cap
Number of Balls	96
Wiper Type	Polymer
Part Number	0215200325

(1) P3 = 12 µm / 300 mm, P5 = 23 µm / 300 mm, T5 = 23 µm / 300 mm, T7 = 52 µm / 300 mm

(2) Please ask Thomson Customer Service for available preload options

Note: Dimensional information for all End Journals and Bearing Supports is available on page 87 – 97. Information on required lubrication is on page 114.

Ø 63 x 20 mm – Metric Ball Screws – Rolled

Ball Screw

Nominal Ball Screw Diameter	63 mm
Nominal Ball Screw Lead	20 mm
Thread Direction	Right Hand
Number of Turns	2
Screw Material	CF53
Screw Weight	22 kg/m
Nominal Ball Diameter	7.14 mm
Lead Accuracy ⁽¹⁾ T7 Part Number	0205000236

Ball screws can be cut to the length you require. Specify ball screw part number and overall length at time of order

Cylindrical Ball Nut – KGM-D

DIN 69051 Compliance

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	78.4 kN
Max. Static Load	171.3 kN
Torque to Raise 1 kN	3.54 Nm
Nut Weight	1.95 kg
Preload Classes ⁽²⁾	See order code on page 98
Standard max. Backlash	0.084 mm
Ball Return Type	Channel
Number of Balls	96
Wiper Type	Rubber
Part Number	0215050297

(1) P3 = 12 µm / 300 mm, P5 = 23 µm / 300 mm, T5 = 23 µm / 300 mm, T7 = 52 µm / 300 mm

(2) Please ask Thomson Customer Service for available preload options

Ø 80 x 10 mm – Metric Ball Screws – Rolled

Ball Screw

Nominal Ball Screw Diameter	80 mm
Nominal Ball Screw Lead	10 mm
Thread Direction	Right Hand
Number of Turns	1
Screw Material	CF53
Screw Weight	36.4 kg/m
Nominal Ball Diameter	7.144 mm
Lead Accuracy ⁽¹⁾ T7 Part Number	0220037

Ball screws can be cut to the length you require. Specify ball screw part number and overall length at time of order

Flanged Ball Nut – KGF-N

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	86.3 kN
Max. Static Load	262.4 kN
Torque to Raise 1 kN	1.77 Nm
Nut Weight	3.9 kg
Preload Classes ⁽²⁾	See order code on page 98
Standard max. Backlash	0.08 mm
Ball Return Type	Single Circuit Polymer
Number of Balls	175
Wiper Type	Rubber
Part Number	0215200028

Flanged Ball Nut – KGF-D (FK)

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	121.9 kN
Max. Static Load	374.9 kN
Torque to Raise 1 kN	1.77 Nm
Nut Weight	3.9 kg
Preload Classes ⁽²⁾	See order code on page 98
Standard max. Backlash	0.084 mm
Ball Return Type	Single Circuit Metal
Number of Balls	210
Wiper Type	Polymer
Part Number	0215200326

(1) P3 = 12 µm / 300 mm, P5 = 23 µm / 300 mm, T5 = 23 µm / 300 mm, T7 = 52 µm / 300 mm

(2) Please ask Thomson Customer Service for available preload options

Note: Dimensional information for all End Journals and Bearing Supports is available on page 87 – 97. Information on required lubrication is on page 114.

Ø 80 x 10 mm – Metric Ball Screws – Rolled

Ball Screw

Nominal Ball Screw Diameter	80 mm
Nominal Ball Screw Lead	10 mm
Thread Direction	Right Hand
Number of Turns	1
Screw Material	CF53
Screw Weight	36.4 kg/m
Nominal Ball Diameter	7.144 mm
Lead Accuracy ⁽¹⁾ T7 Part Number	0220037

Ball screws can be cut to the length you require. Specify ball screw part number and overall length at time of order

Cylindrical Ball Nut – KGM-N

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	86.3 kN
Max. Static Load	262.4 kN
Torque to Raise 1 kN	1.77 Nm
Nut Weight	3.9 kg
Preload Classes ⁽²⁾	See order code on page 98
Standard max. Backlash	0.08 mm
Ball Return Type	Single Circuit Polymer
Number of Balls	175
Wiper Type	Rubber
Part Number	0215050142

Threaded Ball Nut – KGM-G

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	121.9 kN
Max. Static Load	375 kN
Torque to Raise 1 kN	1.77 Nm
Nut Weight	4.9 kg
Preload Classes ⁽²⁾	See order code on page 98
Standard max. Backlash	0.18 mm
Ball Return Type	Single Circuit Metal
Number of Balls	210
Wiper Type	Polymer
Part Number	0215050346

Cylindrical Ball Nut – KGM-D

Thread Direction	Right Hand
Nut Material	1.7131 (ESP 65)
Dynamic Load	78.4 kN
Max. Static Load	171.3 kN
Torque to Raise 1 kN	1.77 Nm
Nut Weight	3.9 kg
Preload Classes ⁽²⁾	See order code on page 98
Standard max. Backlash	0.08 mm
Ball Return Type	Single Circuit Polymer
Number of Balls	175
Wiper Type	Rubber
Part Number	0215050297

Whirled and ground ball screws – general information

Manufacturing methods

- **Whirled (standard)**

Whirled ball screw shafts are produced using cutting plates in special materials. In this process, the raceway is cut into the previously hardened raw material in a single pass, or multiple passes for large balls.

- **Ground**

Depending on the ball size, the raceway of ground ball screw shafts is either ground directly into the solid blank, or the blank is first whirled and then ground.

Tolerance classes

- **Whirled (standard)**

Whirled ball screw shafts are currently available in classes P3, P4 and P5 and also T5 and T7.

- **Ground**

Ground shafts are available upon request.

Whirled and ground ball screws – general information

Thomson whirled shafts are setting new standards:

- Higher or at least identical surface quality of the raceway compared to ground ball screws
- Better running in behavior, i.e. the ball nut's preloading is maintained longer
- Greater profile accuracy due to geometrically defined cutting of the cutting plates
- Greater service life due to the points listed above

Technical data

Thread:	Gothic thread profile
Diameter:	16–160 mm (other sizes on request)
Number of starts:	1–2
Lead:	As customer requirement
Thread direction:	Clockwise, counter-clockwise, right-hand/left-hand shaft
End journal:	As customer requirement

• Secondary size

¹ Basis for screw calculation:

Cheese head screws complying with EN ISO 4762, property class 8.8, maximum operating forces F_{bmax} at 90% exploitation of the yield point, safety factor $v=0.8$ additionally taken into consideration, friction factor $\mu_{ges}=0.14$ for untreated, oiled screws.

Tighten using torque wrench to torque T_a . Operating forces in excess of this shall be absorbed by the use of screws complying with EN ISO 4762 in higher property classes

High-load ball screws – general information

These ball screws move more than twice the load of a standard ball screw, while providing significantly longer and more reliable life with high stiffness and minimum maintenance.

Any new application requires careful analysis of product performance, life and cost. Especially those that take on larger loads. Given that Thomson high-load ball screw technology exceeds more than twice the load capacity of a standard ball screw, it is wise to consider these screws for your next high-load application.

Reliable performance

Thomson has manufactured ball screws and nuts for nearly a century. Our background in flight-critical aerospace and defense applications uniquely positions us to provide the highest levels of quality across all of our ball screw products.

Standard and custom offerings

Thomson provides a standard range of high-load ball screws from 40 - 160 mm diameter with a maximum of 1,440 kN dynamic load capacity. The materials used to manufacture ball screws are critical to their performance. Thomson has decades of experience working with a wide range of standard and non-standard materials. Our experts can recommend the materials or coatings best suited for your application.

Customized ball screw assemblies according to specific application demands are also available upon request.

Consistent quality and delivery

A combination of advanced engineering and proprietary manufacturing processes consistently exceed performance, precision and life versus comparable ball screws.

Thomson high-load ball screws compared to other screw technologies

Screw Technology Comparison

Screw Type	Standard Ball Screw	High-load Ball Screw	Roller Screw
Size Compactness	++	++++	+++
Price	++++	+++	+

Higher load capacity, longer lifetime

The life of the assembly is a direct function of the load capacity. Thomson has developed a high-load ball screw by implementing a unique design that provides longer lifetimes when compared to traditional ball screws. Using a high-load ball screw in a low-load application extends the life of the product by four to eight times.

A longer lifetime makes Thomson high-load ball screws an attractive option for engineers looking to replace a roller screw or hydraulic system in their applications.

Cost savings, smaller footprint

High-load ball screws offer a space-saving design at an economical price.

A standard configuration ball screw is capable of providing a high-load solution but would require a larger screw diameter, which adds to cost and footprint needed.

A roller screw is also capable of moving high-loads but has a nut that is close to 50% larger at 150% the price of a comparable high-load ball screw.

Roller screws also require extensive upfront precision machining and a more complex assembly, which contributes to an overall higher cost and larger footprint for final installation.

Thomson high-load ball screws improve performance in a smaller package, extend product life and save money. Their unique design increases the ball screw load capacity, resulting in an ideal fit for any application with a need for high thrust.

Thomson high-load ball nuts offer a faultless, gentle recirculation of the balls and precise positioning.

Features & Highlights

- Increased capacity for high-load applications at high speeds and long lifetimes.
- More economic solution vs. roller screws.
- Lead accuracy of up to $\pm 6 \mu\text{m}/300 \text{ mm}$.
- Compact, simple design allows for downsizing, less weight.
- Optimized ball nut design for maximizing load capacity.
- Available with up to 15 m screw length and with single or double nuts.
- Multiple preloading options available.
- Smooth, quiet motion.

Standard range for whirled heavy duty recirculating ball screws

Only available with single nuts with backlash (SEM)

SFM Safety nut

The safety nut is an optional part to a flanged ballscrew. The safety nut basically works just like a normal ballscrew nut. If the axial play increases due to wear, ball breakage or ball loss, the thread of the safety unit comes into contact with the ballscrew. This means the nut cannot be penetrated. The normal function of the unit is guaranteed up to an axial play of 0.5 mm. Thomson also offers complete units with integrated safety nuts. Please ask your Thomson representative.

End journal dimensions for BK, EK and FK supports

The type of bearing selected influences the stiffness of the lead screw system as a whole and also the rotational vibration and buckling behavior of the lead screw shaft. The required end journals are made for the trapezoidal lead screw according to the various types of bearing.

Note: Bearings are not supplied.

Order Code Ball Screw Drives/Ball Screws

1.	2.	3.	4.	5.	6.	7.	8.	9.	10.	11.	12.	13.	14.	15.	16.	17.
----	----	----	----	----	----	----	----	----	-----	-----	-----	-----	-----	-----	-----	-----

1. Product

KGT = Ball screw drive complete

2. Nut version

D = Version according to DIN 69051
N = Thomson Neff version
G = Cylindrical with thread
L = Shifted (FL)
S = Special, according to drawing
H = Highload

3. Nominal thread diameter [mm]

4. Thread lead [mm]

5. Lead accuracy

P3, P5, T5, T7

6. Thread direction

RH = Right hand thread
LH = Left hand thread

7. Screw end 1

Standard end form C, D, F, H, J, L,
S, T, W, B, Z, see page 127 et seq.
G = Annealed end
K = According to customer's drawing
X = Cut only

8. Reference to end length 1

for G/K end length [mm]

9. Overall length [mm]

10. Screw end 2

Standard end form C, D, F, H, J, L,
S, T, W, B, Z, see page 127 et seq.
G = Annealed end
K = According to customer's drawing
X = Cut only

11. Reference to end length 2

for G/K end length [mm]

12. Nut form and configuration

Flanged side of the KGF nut and contact
surface of the KGM Nut always showing
towards screw end 1
F = 1 Flanged nut
M = 1 Cylindrical nut
FM = 1 Preloaded double nut unit
(1 KGF, 1 KGM)
FF = 1 Preloaded double nut unit
(2 KGF)
MM = 1 Preloaded double nut unit
(2 KGM)

13. Return system

E = Single liner
M = Multi liner (MUS)
D = End cap
K = Channel

14. Wiper

EE = Elastomer
KK = Plastic
00 = Without wiper
ZZ = One wiper on both sides
with centering for spiral spring cover

15. Manufacturing process

R = Rolled

16. Special version or with accessories

0 = No
1 = Yes (please describe)

17. Backlash / preload options

0 = Normal
1 = Backlash reduced
2 = Light preload (1-2%)
3 = Preload (>4%)

Example: One ball screw drive complete with machined screw ends

KGT	D	2005	T7	RH	K105	1003	K025	F	E	EE	R	0	0

Ball nuts

1.	2.	3.	4.	5.	6.	7.
----	----	----	----	----	----	----

1. Product

KGF = Flanged nut
KGM = Cylindrical nut

2. Nut version

D = Version according to DIN 69051
N = Thomson Neff version
G = Cylindrical with thread
L = Shifted (FL)
S = Special, according to drawing

3. Nominal thread diameter [mm]

4. Thread lead [mm]

5. Thread direction

RH = Right hand thread
LH = Left hand thread

6. Return system

E = Single liner
M = Multi liner (MUS)
D = End cap
K = Channel

7. Wiper

EE = Elastomer
KK = Plastic
00 = Without wiper
ZZ = One wiper on both sides
with centering for spiral spring cover

KON adapter support

Adapter support for side mounting of
KGF ball screw flanged nut.

Material: 1.0065 (St37) or 1.0507 (St52).

SF helical spring cover

Helical spring cover for protection against ambient influences.
Suitable for horizontal and vertical installation.

Material: Hardened spring steel.

A centering sleeve is required on the mounting face of the nut where a helical spring cover is used.

Only available for KGF-D, KGF-N, KGM-D and KGM-N style nuts.

Table headings are nominal diameter x lead (e.g. 16x05).

For 16x05 16x10

KOKON® – fully protected ball screw for harsh conditions

The KOKON recirculating ball screw is ideal for harsh, very dirty applications and applications with long travels.

Complete with shaft, cover and bearings as a ready-to-fit motion system. The central housing with preloaded nut unit and cover band return may be mounted in various orientations.

KGT cover in impact resistant elastomeric polymer PA 12.

Easy to maintain due to easy accessibility for relubrication.

All dimensions for the cover are dependent on the length of the elements.

Calculation

Efficiency and torques

Efficiency is affected by many operating influences as well as geometric data.

This means that practical values may fluctuate in relation to the calculated values by $\pm 5\%$.

Theoretical efficiency (η) when converting torque into axial force is calculated as follows:

$$\eta = \frac{\tan \varphi}{\tan (\varphi - \rho'')} \quad \text{where } \tan \varphi = \frac{P_{ho}}{d_o \cdot \pi}$$

The theoretical efficiency (η') when converting an axial force into a torque is calculated as follows:

$$\eta' = \frac{\tan (\varphi - \rho'')}{\tan \varphi} \quad \text{where } \tan \varphi = \frac{P_{ho}}{d_o \cdot \pi}$$

The theoretical level of efficiency is reduced by around 5% to make allowances for operating influences such as speed, temperature and lubrication. If the ratio of load F to dynamic rated load C_{am} is less than 0.5, a further reduction is made based on the load factor f_l (see table below).

The resulting efficiency only applies to the ball screw. The figure assumes the ball screw is lubricated but has no wiper or shaft bearing.

If you are interested in special measures for improving efficiency, please contact us.

Friction angle ρ'' (rho double prime)

$\rho'' = 0.23^\circ$ At tolerance class P and T1 – T3

$\rho'' = 0.34^\circ$ At tolerance class T5

$\frac{P_{ho}}{d_o} +$ See tables of dimensions

$\frac{F}{C_{am}}$	f_l
0.4	0.99
0.3	0.98
0.2	0.97
0.1	0.96

Example

$$\frac{F}{C_{am}} = \frac{10.000}{53.900} = 0,19 \rightarrow f_l \approx 0.97$$

$$\tan \varphi = \frac{10}{40 \cdot \pi} = 0,08$$

$$\varphi = 4.55^\circ$$

Practical efficiency after running in

$$F = 10,000 \text{ N}$$

$$C_{am} = 53,900 \text{ N}$$

$$\eta = \frac{0,08}{\tan(4,55^\circ + 0,23^\circ)}$$

$$\eta = 0.957$$

$$\eta_p = \eta \cdot 0.95 \cdot f_l$$

$$\eta_p = 0.957 \cdot 0.95 \cdot 0.97$$

$$\eta_p = 0.88 \pm 5\%$$

F = Axial load

C_{am} = Dynamic rated load

f_l = Load factor

φ (phi) = Lead angle

η (êta) = Theoretical efficiency

η_p = Practical efficiency

T_a = Input torque [Nm]

T_e = Output torque [Nm]

Converting torque into an axial force requires an input torque of:

$$T_a = \frac{F \cdot P_{ho}}{2000 \cdot \pi \cdot \eta_p} \text{ [Nm]}$$

Converting an axial force into a torque produces an output torque of:

$$T_e = \frac{F \cdot P_{ho} \cdot \eta'_p}{2000 \cdot \pi} \text{ [Nm]}$$

Calculation

Stiffness R

The total stiffness R_{tot} of a ball screw is composed of the stiffness of the shaft R_s and the stiffness of the nut unit $R_{nu, ar}$.

$$\frac{1}{R_{tot}} = \frac{1}{R_s} + \frac{1}{R_{nu, ar}} \quad [N/\mu m]$$

Shaft stiffness depends on the type of bearing.

Fixed bearing at one end

$$R_{s1} = \frac{A \cdot E}{l_1 \cdot 10^3} \quad [N/\mu m]$$

$E = 21 \cdot 10^4 \text{ N/mm}^2$

$l, l_1, l_2 \text{ [mm]}$

Fixed bearing at both ends

$$R_{s2} = \frac{A \cdot E}{l_2 \cdot 10^3} \cdot \frac{l}{l - l_2} \quad [N/\mu m] \rightarrow l_2 \leq l/2$$

$R_{s2 \min} \text{ at } l_2 = l/2$

Fitting the nut

Lubrication

Correct lubrication for ball screws is not only essential in terms of achieving the expected service life, but also has an impact on smooth running properties, heat generation during operation and idling torque.

In principle, the types of oil and grease used for rolling bearings are suitable for this purpose. Unless the customer has specified otherwise, the function acceptance process is performed at Thomson using an oil in accordance with ISO VG100.

Oil lubrication

Generally speaking, CL oils are used in this context for increasing corrosion protection and durability. Alloyed CLP oils with EP additives can also be used. The appropriate level of viscosity depends on the circumferential speed (in other words, diameter and speed) and the ambient or expected operating temperature. The amount of oil required per ball revolution lies somewhere between 0.3 and 0.5 cm³/h, depending on the speed. Only 1/10 of this amount is needed if liquid grease is used. For oil bath lubrication, it is enough for the oil level to reach halfway up the lowest lying ball if the mounting position is horizontal. Use the diagram below to determine the viscosity level.

Example: KGT63 x 10
Average speed $n_m = 200$ rpm
Operating temperature $t = 25^\circ\text{C}$

For a nominal diameter of 63 mm and $n_m = 200$ rpm, the left part of the diagram shows a viscosity v_1 of 110 mm²/s. When this value is transferred to the diagram on the right, the point of intersection at a temperature of 25°C lies between ISO VG46 and ISO VG68. In order to ensure there is an adequate lubricating film during all operating states, the higher value should be selected in each case. This would be ISO VG68 in the current case, although even higher levels may be required for longer running times where fatigue may be an issue. The appropriate oils with this viscosity class can be selected from the table of lubricants shown below.

Grease lubrication

Grease can also be used to lubricate ball screws. This approach allows longer intervals between each lubrication.

Given that a small amount of grease escapes from the nut and remains on the shaft with each stroke of the ball screw, even when the wipers are working as well as they can, the amount of grease available reduces during operation. This limits the length of time the ball screw can be used without being regreased. The expected service life L10 can only be achieved if the grease lost is replaced by means of a centralized lubrication system or a lubrication schedule tailored to the application in question.

Manual regreasing can achieve an average of around 700 extra service hours. This figure can vary considerably, however, depending on the machine design and the conditions under which it is used.

Lubricating greases are divided into NLGI classes based on their penetration level in accordance with DIN 51818. Under normal conditions (operating temperatures between -20°C and $+120^\circ\text{C}$), waterproof greases from class K2K-20 in accordance with DIN 51825 should be used for ball screws. Greases from class K1K-20 (very high speeds) or KP2K-20 (very high loads or low speeds) can be used for special applications.

Greases which do not share the same saponification basis should not be mixed. The manufacturer must be consulted if operating temperatures are going to be higher or lower than the values specified. When deciding how much grease to use, look to fill about half of the space available. In order to avoid the ball screws heating up unnecessarily as a result of excess grease, machine designs should ensure that waste or superfluous grease is able to escape.

If you have any additional questions concerning lubrication, please consult our engineering consultants.

Calculation for determining volume when regreasing (using grease)

$$V_{RL} = \frac{d_0 \times P_h \times D_w \times i^{0.7}}{1250}$$

V_{RL} = Regreasing volume [g]
 d_0 = Nominal diameter of shaft [mm]
 P_h = Lead [mm]
 D_w = Diameter of ball [mm]
 i = Number of revolutions in nut

When lubricating a dummy nut, multiply the volume calculated by 2.5.

Trapezoidal thread screws – robust and high in value

Trapezoidal thread screws are an inexpensive solution for design tasks relating to clamping, positioning and advance motions.

The range complies with DIN 103 and offers a wide selection of nuts made from various materials.

Every shaft can be supplied with customized end journals.

Technical data for trapezoidal thread screws

Thomson trapezoidal-thread screws are manufactured in a rolled design. See separate catalog for other dimensions and coarse thread (V2A version).

RPTS precision trapezoidal thread screw

Technical data

- Thread: Metric ISO trapezoidal thread complying with DIN 103
- Diameter: 10 – 80 mm
- Lead: 2 – 24 mm
- Number of starts: up to 6 threads
- Direction of rotation: right-hand thread, single-start also available as left-hand thread
- Length: up to 3000 mm to Tr 18 x 4
up to 6000 mm from Tr 20 x 4
- Material: 1.0401 (case-hardened steel C15) low-stress annealed, weldable
- Precision: 50 – 300 µm/300 mm
- Straightness: 0.1 – 0.5 mm/300 mm
- Right-hand/left-hand shaft: for leads of 2 – 10 mm
- End journal: as customer requirement

Trapezoidal-thread screw in right-hand and left-hand thread

Technical data

- Diameter: 10 – 80 mm
 - Lead: 2 – 10 mm
 - Number of starts: single-start
 - Direction of rotation: right-hand thread and left-hand thread
 - Length: maximum 3000 mm, from Tr 20x4 up to 6000 mm on request
 - Material: 1.0401 (C15)
 - Precision: 50 – 300 µm/300 mm
 - Straightness: 0.1 – 0.5 mm/300 mm
 - Dimension X: 100 mm
- Diameter in area of dimension X is smaller than the nominal diameter

RPTS trapezoidal-thread screws

RPTS rolled precision trapezoidal thread screw

Manufacturing length 3000 mm, available up to 6000 mm length in diameters of 20 mm and greater. Dimension L as customer requirement.

Material: 1.0401 (C15).

¹⁾ In a deviation from DIN 103 the minor diameter is slightly smaller for greater root rounding.

²⁾ Pitch angle at the pitch diameter; → formula (XVI) p. 83.

³⁾ Theoretical efficiency for the transformation of a rotary motion into an axial motion at coefficient of friction $\mu = 0.1$.
Efficiency for other coefficients of friction ; → formula (XVI) p. 83.

⁴⁾ The polar resistance moment is twice as great as the resistance moment.

⁵⁾ Right-hand thread only.

⁶⁾ Special profile.

Trapezoidal thread nuts

Trapezoidal thread nuts complying with DIN 103, tolerance class 7H.

In principle, chased versions of nuts with $\varnothing$ 18 mm and above are available for all screws.

Trapezoidal thread nuts

KSM short cylindrical steel nut blank

Suitable for clamping, adjustment movements in manual operation and as a fixing nut. Not suited for motion systems as the steel-steel sliding pairing has a tendency to scuff.

Further processing: The thread may be used as a reference for precise instructions on use and installation.

Material: Free-cutting steel 1.0718 (9 SMn 28K).

EKM with left-hand thread on request.

Material properties

Material 2.1090

- 0.2 % yield point $R_{p0.2}$: 120 N/mm²
- Tensile strength R_m (δB): 240 N/mm²
- Elongation at fracture A5 min.: 15 %
- Brinell hardness HB 10/1000: 65
- Density: 8.8 kg/dm³
- Modulus of elasticity: 90000 N/mm²
- pv factor: 300 N/mm² · m/min

Material PETP

- Tensile strength: 80 N/mm²
- Modulus of elasticity: 2800 – 3000 N/mm²
- Impact strength: 40 kJm²
- Notched bar impact strength: 4 kJm²
- Thermal expansion: 8,5 · 10⁻⁵/°C
- Water absorption: 0.25 %
- Water saturation: 0.6 %
- Density: 1.38 kg/dm³
- Friction against steel: 0.05 – 0.08
- Ball indentation hardness H 358/30: 150 N/mm²
- Elongation at yield stress of 80 N/mm²: 4 – 5 %
- pv factor: 100 N/mm² · m/min
- Maximum pressure per unit area: 10 N/mm²
- Maximum sliding speed: 120 m/min

KON adapter support

Adapter support for radial fastening of EFM trapezoidal thread flanged nut.

Material: 1.0065 (St37) or 1.0507 (St52).

End journals for loose bearings/fixed bearings

Form D, F

The type of bearing selected influences the stiffness of the lead screw system as a whole and also the rotational vibration and buckling behavior of the lead screw shaft. The required end journals are made for the trapezoidal lead screw according to the various types of bearing.

Note: Bearings are not supplied.

Calculation

Load capacity of trapezoidal thread screws

The load capacity of sliding pairs is dependent on many factors such as materials used, surface properties, amount of wear, area pressure, lubrication status, speed and temperature. In turn, some of these factors depends on the total duty time and the efficiency of the heat dissipation.

The permissible area pressure is primarily dependent on the sliding speed of the lead screw.

The area pressure for motion systems should not exceed the maximum permissible value of the material.

The permissible speed can be calculated from the bearing length ratio of the nut and the pv factor of the nut material concerned.

pv factors	
Material	pv factors [N/mm ² · m/min]
G-CuSn 7 ZnPb (Rg 7)	300
G-CuSn 12 (G Bz 12)	400
Plastic (PETP)	100
Cast iron GG 22/GG 25	200

P _p factors	
Material	P _p factors [N/mm ²]
G-CuSn 7 ZnPb (Rg7)	10 - 20
G-CuSn 12 (G Bz 12)	10 - 20
Plastic (PETP)	5 - 10
Cast iron GG 22/GG 25	5

Maximum values valid for low duty cycles and low speed of travel.

Required bearing length ratio

$$(VIII) \quad A_{\text{erf}} = \frac{F_{\text{ax}}}{P_p}$$

A _{erf}	Required bearing length ratio [mm ²]
F _{ax}	Axial load acting [N]
P _p	Maximum permissible area pressure

Maximum permissible sliding speed

$$(IX) \quad v_{Gp} = \frac{pv - \text{Wert}}{P_p}$$

pv factor	See table
v _{Gp}	Maximum permissible sliding speed [m/min]

Maximum permissible speed

$$(X) \quad n_p = \frac{v_{Gp} \cdot 1000}{D \cdot \pi}$$

D	Pitch diameter [mm]
n _p	Maximum permissible speed [rpm]

Permissible advance speed

$$(XI) \quad s_p = \frac{n_p \cdot P}{1000}$$

P	Thread pitch [mm]
s _p	Permissible advance speed [m/min]

Calculation

Critical speed of trapezoidal thread screws

There is a risk of resonance bending vibration in slender rotating components such as shafts. The method described below permits the estimation of the resonant frequency on the assumption of an adequately rigid installation. Speeds close to the critical speed further increase the risk of lateral buckling. The critical speed must, therefore, also be viewed in conjunction with the critical buckling force.

Maximum permissible shaft speed

$$(XII) \quad n_p = 0,8 \cdot n_{cr} \cdot f_{cr}$$

n_p Maximum permissible shaft speed [rpm]
 n_{cr} Theoretical critical shaft speed [rpm],
leading to resonance vibrations → see graph
 f_{cr} Correction factor taking into consideration the type of shaft bearing
→ see table

The operating speed may not be more than 80 % of the maximum speed

Theoretical critical speed n_{cr}

Bearing types

Typical values for the correction factor f_{cr} corresponding to the classical installation situations for standard shaft bearings.

Calculation

Critical buckling force of trapezoidal thread screws

There is a risk of slender components such as shafts buckling to one side under axial compressive loading.

The permissible axial force according to Euler can be determined with the procedure described below. The safety factors appropriate to the system shall be taken into consideration prior to the specification of the permissible compressive force.

Maximum permissible axial force

$$(XIII) \quad F_p = 0,8 \cdot F_c \cdot f_c$$

F_p Maximum permissible axial force [kN]
 F_c Theoretical critical buckling force [kN], → see graph
 f_c Correction factor taking into consideration the type of shaft bearing
 → see table

The operating force may not be more than 80 % of the maximum permissible axial force

Theoretical critical buckling force F_c

Bearing types

Typical values for the correction factor f_c corresponding to the classical installation situations for standard shaft bearings.

Calculation

Shaft sag as a consequence of its own weight

The dead weight of the unsupported shaft leads to sag, even in the case of properly installed lead screws, in which the forces acting are absorbed by external guides. The formula given below allows determination of the shaft's maximum sag.

Maximum shaft sag

$$(XIV) \quad f_{\max} = f_B \cdot 0,061 \cdot \frac{w_{TGS} \cdot L_{TGS}^4}{I_Y}$$

f_B Correction factor taking into consideration the type of shaft bearing
→ see table
 I_Y Geometrical moment of inertia [cm⁴]
 L_{TGS} Free, unsupported shaft length [m]
 w_{TGS} Distributed load [kg/m]

Theoretical maximum sag

Bearing types

Typical values for the correction factor f_B corresponding to the classical installation situations for standard shaft bearings.

Calculation

Example calculation of trapezoidal screw

Given: Trapezoidal thread lead screw
RPTS Tr 24x5 shaft
Length $L = 1500$ mm
Bearing journal case 2
Operating speed: $n_{\max} = 500$ [rpm]

Sought: Is the operating speed non-critical?
How great is the permissible axial force?
How great is the maximum sag?

Maximum permissible shaft speed n_{zul}

from (XII) $n_p = 0,8 \cdot n_{cr} \cdot f_{cr} = 0,8 \cdot 830 \text{ 1/min} \cdot 1 = 664 \text{ 1/min}$

Theoretical critical speed $n_{cr} = 830$ rpm
→ Theoretical critical speed graph

from (XIII) $F_p = 0,8 \cdot F_c \cdot f_c = 0,8 \cdot 4,2 \text{ kN} \cdot 1 = 3,36 \text{ kN}$

Theoretical critical buckling force $F_c = 4.2$ kN
→ from Theoretical critical buckling force graph

from (XIV) $f_{\max} = f_B \cdot 0,061 \cdot \frac{W_{TGS} \cdot L_{TGS}^4}{I_Y} = 1 \cdot 0,061 \cdot \frac{2,85 \text{ kg/m} \cdot (1,5 \text{ m})^4}{0,460 \text{ cm}^4}$
 $f_{\max} = 1,91 \text{ mm}$

Distributed load $W_{TGS} = 2.85$ kg/m
Geometrical moment of inertia $I_Y = 0.460 \text{ cm}^4$
→ from table on page 119

Result:

The lead screw selected is non-critical at $n_{\max} = 500$ rpm.
It can be loaded with a maximum axial load of 3.36 kN and,
mounted horizontally, will suffer a maximum sag of 1,91 mm.
(Note pressure per unit area and pv factor)

Calculation

Input torque and input power required

The input torque required for a trapezoidal screw is a result of the acting axial load, the thread pitch and the efficiency of the lead screw and its bearings. The acceleration torque must be checked if acceleration times are short and speeds are high.

As a matter of principle, it must be noted that a breakaway torque must be overcome when a trapezoidal thread lead screw starts to move.

Input torque required

$$(XV) \quad M_d = \frac{F_{ax} \cdot P}{2000 \cdot \pi \cdot \eta_A} + M_{rot}$$

F_{ax}	Total axial load acting [N]
P	Thread pitch [mm]
η_A	Efficiency of total motion system $= \eta_{TGT} \cdot \eta_{Fixed \text{ bearing}} \cdot \eta_{Loose \text{ bearing}}$ $\eta_{TGT} (\mu = 0.1) \rightarrow \text{Table page 119}$ $\eta_{Fixed \text{ bearing}} = 0.9 \dots 0.95$ $\eta_{Loose \text{ bearing}} = 0.95$
M_d	Input torque required [Nm]
M_{rot}	Rotary moment of acceleration [Nm] $= J_{rot} \cdot \alpha_0$ $= 7,7 \cdot d^4 \cdot L \cdot 10^{-13} \cdot \alpha_0$ J_{rot} Rotary moment of inertia [kgm ²] d Shaft nominal diameter [mm] L Shaft length [mm] α_0 Angular acceleration [1/s ²]

Efficiency η for friction factors other than $\mu = 0.1$

$$(XVI) \quad \eta = \frac{\tan \alpha}{\tan(\alpha + \rho')}$$

η	Efficiency of the conversion of a rotary motion into a axial motion
α	Pitch angle of the thread [°] → Table page 119 or generally: $\tan \alpha = \frac{P}{d_2 \cdot \pi}$ where P Thread pitch [mm] d_2 Pitch diameter [mm]
ρ'	Thread angle of friction [°] $\tan \rho' = \mu \cdot 1.07$ for ISO trapezoidal thread μ Coefficient of friction

	μ starting up ($= \mu_0$)		μ in motion	
	dry	lubricated	dry	lubricated
Metal nuts	≈ 0.3	≈ 0.1	≈ 0.1	≈ 0.04
Plastic nuts	≈ 0.1	≈ 0.04	≈ 0.1	≈ 0.03

Input power

$$(XVII) \quad P_a = \frac{M_d \cdot n}{9550}$$

M_d	Input torque required [Nm] → from (XV)
n	Shaft speed [rpm]
P_a	Input power required [kW]

Calculation

Torque as a consequence of an axial load

Trapezoidal lead screws, the pitch angle α of which is greater than the friction angle ρ' are considered non-self locking. This means that an axial force applied generates a resulting torque on the shaft. The efficiency η' for the conversion of an axial motion into a rotary motion is less than that for the conversion of a rotary motion into an axial motion.

Holding torque required

$$(XVIII) \quad M_d' = \frac{F_{ax} \cdot P \cdot \eta'}{2000 \cdot \pi} + M_{rot}$$

F_{ax}	Total axial load acting [N]
P	Thread pitch [mm]
η'	Efficiency of the conversion of an axial motion into a rotary motion

$$= \frac{\tan(\alpha - \rho')}{\tan \alpha}$$

$$= 0,7 \cdot \eta$$

The influence of the efficiency of the bearings can be ignored.

M_d'	Holding torque required [Nm]
M_{rot}	Rotary moment of acceleration [Nm]
	$= J_{rot} \cdot \alpha_0$
	$= 7,7 \cdot d^4 \cdot L \cdot 10^{-13}$
	J_{rot} Rotary moment of inertia [kgm ²]
	d Shaft nominal diameter [mm]
	L Shaft length [mm]
	α_0 Angular acceleration [1/s ²]

Installation and maintenance

TGT trapezoidal thread screws

Installation

Trapezoidal thread screws must be carefully aligned on installation – if the appropriate measuring equipment is not available, the lead screw shall be moved once by hand over the entire length before the input unit is fitted. Uneven force requirements and/or running traces on the external diameter of the shaft here indicate errors in the alignment between shaft axis and guide. In this case, first slacken off the relevant mounting screws and then operate the lead screw once again by hand. If the force requirement is now uniform, the corresponding elements must be aligned, otherwise the alignment error must be determined by slackening further mounting screws.

Caps

Trapezoidal thread screws are inherently less sensitive to contamination than recirculating ball screws, especially at low speeds (e.g. manual operation).

Motion drives, in particular those using plastic nuts, however, also require protective measures similar to those for recirculating ball screws.

Lubrication

Oil lubrication

Is only used on trapezoidal thread screws in special cases.

Grease lubrication

This is the usual lubrication for trapezoidal thread screws. The lubrication intervals depend on the operating conditions; it is recommended that the shaft is cleaned before being greased, especially if high performance lubricating systems are being used.

Grease grades: roller bearing greases without a solid lubricant constituent.

Operating temperature

Depends on the nature of the nut used, the lubricating conditions and the requirements made. Please consult us for operation at temperatures in excess of 100°C (in excess of 70°C for plastic nuts).

Wear

May be tested by hand; the nut must be replaced if the axial play of a single thread lead screw is greater than $\frac{1}{4}$ of the lead.

Order Code Trapezoidal thread screw/helical spring cover/splined shafts

The structure of the order code

Trapezoidal thread screws

1. Product

TGS = trapezoidal-thread screw
shaft
TGM = Trapezoidal thread nut

2. Type

Shaft RPTS
Nut: LKM, EKM, KSM, SKM,
LRM, EFM

3. Thread nominal diameter [mm]

4. Thread lead [mm]

5. Thread pitch [mm]

Only in the case of multiple-start threads: The distance between two consecutive threads in the axial direction = pitch/number of starts

6. Thread direction

RH = right hand thread
LH = left hand thread

7. Shaft end 1

Standard end form D, F, H, J, L, S, T, W, Z
K = in accordance with attached customer drawing
X = separating only

8. Reference to end length 1

End length for version K [mm]

9. Overall length of TGS [mm]

10. Shaft end 2

Standard end form D, F, H, J, L, S, T, W, Z
K = in accordance with attached customer drawing
X = separating only

11. Reference to end length 2

End length for version K [mm]

12. Special designs or with accessories

0 = no
1 = yes

Ordering example:

1 Trapezoidal-thread lead screw with shaft ends

1. Product

TGS = trapezoidal-thread screw shaft

2. Type

Shaft RPTS

3. Thread nominal diameter [mm]

24

4. Thread lead [mm]

10

5. Thread pitch [mm]

5

6. Thread direction

RH = right hand thread

7. Shaft end 1

Standard end form L

9. Overall length of TGS [mm]

900

10. Shaft end 2

Standard end form W

12. Special designs or with accessories

0 = no

Ordering example:

1 Trapezoidal thread nut

1. Product

TGM = Trapezoidal thread nut

2. Type

Nut: LRM

3. Thread nominal diameter [mm]

24

4. Thread lead [mm]

10

5. Thread pitch [mm]

5

6. Thread direction

RH = right hand thread

The structure of the order code

Helical spring cover

1. Product

SF = Helical spring cover

2. Minimum diameter D8 [mm]

3. Overall length [mm]

4. Minimum length L8 [mm]

5. Mounting position

V = vertical
H = horizontal

The structure of the order code

splined shaft

1. Product

KW = splined shaft

2. Size

3. Length [mm]

Notes

Thomson lead screws

Smooth and cost-effective solution for precision applications

Thomson precision lead screws are an outstanding and economical solution for your linear motion requirements. Thomson has been active for more than 40 years developing and producing the highest quality lead screws in this industrial sector. Our precision rolling process guarantees positioning to 0.075 mm/300 mm, and our coating method using PTFE creates systems with a lower drag torque and a higher service life.

Thomson has a wide range of standard plastic nut systems available, in the form of anti-backlash or standard Supernuts®. A composite material of acetal and PTFE is used in all these standard plastic nut systems, offering an outstanding lubricant capability with or without supplementary lubrication, at the same time achieving a low rate of wear. As a result of our unique patented backlash-free method design, Thomson is able to offer systems with high axial stiffness, zero backlash and a low drag torque, reducing the demands on the motor. This creates more cost-effective products with a higher performance and longer service life. The two designs automatically adapt to the wear conditions, so that zero backlash is guaranteed for the life of the nut.

Thomson also offers a design service for your application requirements. This means that lead screws can be manufactured to meet your exact specifications. Get in touch with Thomson today and discuss your application with our experienced product specialists.

Product considerations

Reducing backlash is of utmost importance in ensuring precise positioning. Several types of preload variants, which all use a resilient preload are available on the market. As these mechanisms are only limited in their stiffness, a high preload is necessary to retain the position. This leads to a high drag torque, shorter service life and reduced performance. The costs for the system increase, and a larger motor is required.

The Thomson solution

With the patented XC series of nuts with ActiveCAM, optimum axial stiffness with minimum drag torque at the same time is achieved. The use of an extremely stiff stainless steel sleeve for the preload leads to an incomparable axial stiffness. The axial backlash is rectified without high preloading so the lowest possible drag torque is achieved.

Readjusting the preloading following wear

The wear occurring over time is automatically compensated for by the unique ActiveCAM mechanism, without sacrificing stiffness and positioning accuracy, or influencing the drag torque. US Patent #5839321 and one or more foreign equivalents.

Quality lead screws

- ActiveCAM technology
- High-quality plastic nuts
- High precision

Lead screw applications

Engraving machines

Medical equipment

Semiconductor production

Laboratory equipment

Precision lead screws and Supernuts®

Features/benefits

Low costs

Less expensive typically than ball screw solutions.

Variety

Huge selection of leads and diameters.

Lubrication

Internally lubricated plastic nuts may be used without supplementary lubrication. We nevertheless recommend the use of TriGEL grease or a dry lubricant to extend the service life. See page 152.

Vibration and noise generation

No vibration from ball recirculation and frequently less audible noise generation in comparison to recirculating ball screws.

Aspects of the design

Load

Supernuts are a cost-effective solution for medium to light loading. In vertical applications, the Anti-Backlash Supernuts should be mounted with the thread/flange on the underside.

Unilateral load

Unilateral loads that may exert a torque on the nut will lead to premature failure.

Critical speed

See critical speed graph on page 145.

Buckling load

See buckling load graph on page 146.

Self-locking

Lead screws can be self-locking at small leads. For the best possible operating conditions, the shaft pitch should always be greater than 1/3 of the nominal diameter.

Customized solution

Ability to adapt the components to your application.

Corrosion resistant*

Stainless steel shafts, Acetal nuts.

Environment

Less susceptible to contamination by particles than recirculating ball screws.

Low weight

There is less mass to move.

Temperature

The heat generated by the environment and friction is the principal cause for premature failure of the plastic nuts. Note the limit values for temperature listed below and discuss your application with regard to continuous operation, high loading and high-speed applications with our product specialists. Thomson recommends bronze nuts for high-temperature environments. We will also be pleased to advise you on the selection of a high-temperature plastic for a custom application.

Efficiency

The following is true except for large leads: the greater the lead, the better the efficiency. Even though acetal in combination with PTFE has excellent lubricating properties, recirculating ball screws have significantly greater efficiency than lead screws. See page 151 for the actual efficiency.

Length limit values

Shaft diameter	maximum length
10 mm	1200 mm
12–16 mm	1800 mm
>16 mm	3600 mm

Pitch precision

Standard quality (SRA)	250 µm/300 mm
Precision quality (SPR)	75 µm/300 mm

Mounting		Shafts	Nuts**			
Maximum temperature	Coefficient of friction	Material	Material	Tensile strength	Water absorption (24 hour %)	Coefficient of thermal expansion
82 °C	0.08 - 0.14	Stainless steel*	Acetal with PTFE	55 N/mm²	0.15	9.7 x 10 ⁻⁵ 1/°C

* 1.4301 (AISI 304) and 1.4305 (AISI 303)

** Other materials available on a custom basis.

Useful formulas for lead screws

TORQUE, ROTARY LINEAR

Drive on the shaft to move the nut, or drive on the nut to move the shaft.

$$\text{Torque} = \frac{\text{load [N]} \times \text{lead [mm]}}{2\pi \times \text{efficiency}} \quad [\text{Nmm}]$$

TORQUE, LINEAR ROTARY

Load on the nut to rotate the shaft.

$$\text{Torque} = \frac{\text{load} \times \text{lead} \times \text{efficiency}}{2\pi}$$

EFFICIENCY

$$\% \text{ efficiency} = \frac{\tan(\text{pitch angle})}{\tan(\text{pitch angle} + \text{"arctan"} f)} \times 100$$

f = coefficient of friction

As a rule, the following is true: Systems with an efficiency of 50% or greater are not self-locking. For efficiency see page 151. The efficiencies listed in the catalog are calculated for a coefficient of friction of 0.1.

Graph of critical rotational speed limit values

Every lead screw has a rotational speed limit. This is the point at which the rotational speed sets up heavy vibration. This critical point changes depending on the end bearing supports used and the bearing combination.

To use this chart, you must determine the speed of rotation required and the maximum length between the bearing supports. Then select one of the four bearing combinations shown below. The critical speed limit can be found by locating the point at which the speed of rotation (horizontal lines) intersects with the unsupported shaft length (vertical lines) as modified by the bearing combination listed below. It is recommended that the lead screws be operated at no more than 80% of the critical speed limit value.

Warning: The graphs for the shaft diameters illustrated are based on the smallest minor diameter of a standard shaft within the nominal size range and are cut off at the maximum speed of rotation for the nut. This value for the rotational speed **MAY NOT BE EXCEEDED**, whatever the shaft length.

Graph of critical buckling force

This graph is used to determine the maximum compression loading on the shafts. Normally, shafts operated under tensile stress are capable of withstanding a loading up to the design load capacity of the nut. The bearing combinations influence the load capacity of the shaft. The four standard variants are listed below with the corresponding bearing scenarios. To determine the safe minimum diameter of the shaft, you must determine the point at which the graphs for the compressive load (horizontal) and the shaft length (vertical) intersect. Consult the manufacturer if the loading values lie in the area of the dotted lines.

Warning: The load capacity of the nuts **MAY NOT BE EXCEEDED**. The curves for the shaft diameter are based on the smallest minor diameter of a standard shaft within the nominal size range.

Ordering information

Thomson designs lead screws for optimum performance. To ensure correct operation, it is recommended that our nuts and shafts are used only with the appropriate matching Thomson products. This is of particular importance in the case of our own thread dimensions. Select a shaft size complying with DIN from page 151 if interchangeability is a requirements criterion.

The use of a lubricant is recommended for the operation of a lead screw with a plastic nut. This increases the service life of the unit and the permissible operating load.

Note: The load indications in the catalog are based on the use of a lubricant.

See pages 152 and 153 for lubrication options.

Nut part number

(see pages 149 and 150)

Prefix for nut style number (letters only - 2 - 4 characters)				Shaft size from table on page 151. (No statement of precision prefix)

Example

X	C	B	10x2M
---	---	---	-------

Note: Make sure the nut you selected is offered for use with the shaft diameter selected. See "Shaft series" on pages 149 and 150 to verify.

Shaft part numbers (see page 151)

				-
Precision prefix (3 letters for precision or standard accuracy)		Shaft size (indication of diameter and lead)	Shaft length (please state units - preferably mm)	

Example

S	P	T	10x2M	150 mm
---	---	---	-------	--------

The shaft and nut are designed to work together properly where these two components have the same suffix for the shaft size (see examples listed above).

See page 148 for notes on ordering

Note: The permissible loading describes the maximum operating load with lubrication at room temperature, 50 % duty time and 500 rpm. Increasing the speed of rotation will lead to a reduction in the maximum operating load. At 1000 rpm, the operating load is approximately 50 % of the permissible load.

Metric stainless steel precision trapezoidal thread lead screw shafts

Rolled precision trapezoidal thread lead screws have a polished finish and thus offer optimum efficiency and low wear. All shafts are made from stainless steel to ensure resistance to corrosion and a smooth finish. SPT and SRT shafts comply with the requirements of DIN 103, while SPR and SRA shafts have improved thread forms for high performance.

^*complies with the requirements specified in DIN 103 Part 1, not defined in Parts 2 and 3.

See page 144 for maximum available shaft lengths

See page 148 for notes on ordering

Lubrication

Overview

We offer a complete range of lubricants including our greases for clean room and vacuum uses. The TriGel product range has been especially developed to provide a lubrication solution for a wide range of applications in linear motion systems. Select the lubricant suited to your requirements.

This will ensure that you get the best performance from your Thomson products.

Lubrication selection table for trapezoidal thread lead screws

Thomson	TriGel-300S	TriGel-450R	TriGel-600SM	TriGel-1200SC	TriGel-1800RC

Packaging 10 cc syringe 0.45 kg tube	TriGel-300S TriGel-300S-1	7832867/TriGel-450R 7832868/TriGel-450R-1	0.1 kg tube/TriGel-600SM	TriGel-1200SC n.a.	7832869/TriGel-1800RC

* Maximum temperature for continuous exposure. Higher temperatures may be permissible but should be validated in the actual end use by the OEM.
Low temperature limits are -15°C or lower. Further information may be obtained from Thomson.

PTFE dry lubricant

Developed for trapezoidal lead screw applications with plastic on metal

A PTFE coating comprises a dry coating, forming a lubricating and barrier layer between the metal substrate and the polymer nut or ball nut. This means that the application of an additional lubricant that must be renewed is unnecessary in many cases.

The coating is very well suited to our XC (SuperNut®) series, comprising plastic nuts and stainless steel lead screws. Service intervals for lubrication are no longer necessary, and the coating does not attract particles of dirt as a lubricant does. Although lower coefficients of friction are possible with a lubricant than with a dry lubricant, lubrication must be maintained to avoid a drop in performance. Coating with PTFE is an attractive and cleaner* alternative to greases and oils.

Typical features

Type:	Connection with solid lubricant
Aim:	Increased lubrication, reduced friction/wear
Appearance:	Black coating
Thickness:	Approximately 13 – 25 µm
Active lubricant:	Polytetrafluorethylene
Coefficient of friction:	0.06 to 0.12
Operating temperature range for the coating:	-250 °C to 290 °C
Acid resistance:	Outstanding
Resistance to alkali:	Very good
Resistance to solvents:	Outstanding

*Some particles are generated by the wear between the nut and the shaft. Over time, the shaft can show signs of a polished finish. This is not necessarily an indication of a malfunction.

Diameter: mm Lead: mm Thread direction: ☐ Clockwise ☐ Counter-clockwise

Precision: /300 mm Nut design: Backlash-free: ☐ Preloaded: ☐ Backlash:

Stroke length: mm Track length: mm Total length: mm

Application:

Environment:

Lubrication: ☐ Oil ☐ Grease

Quantity: Annual requirement: Quantity: Delivery lot:

Mounting the ball screw

Motion system element: ☐ Shaft ☐ Nut Mounting position: ☐ Horizontal ☐ Vertical ☐ Diagonal

Maximum speed: Rpm Maximum load: kN

Bearing scenario:

Load/service life specifications

Usage:		Load [N]	Speed (m/s)	Time period (s)
Required service life:	x10 ⁶ rev.	F ₁		
Required service life:	hrs	F ₂		
Minimum dynamic load:	kN	F ₃		

Module construction options

- ☐ Shafts, cut to length, with ready-mounted nuts
- ☐ Shafts, cut to length, with separately supplied nuts
- ☐ Shafts, annealed ends, with ready-mounted nuts
- ☐ Shafts, annealed ends, with separately supplied nuts
- ☐ Shafts, fully machined, with ready-mounted nuts
- ☐ Shafts, fully machined, with ready-mounted nuts and bearing units
