

# **RSX EXTREME FORCE, HYDRAULIC CLASS ELECTRIC ACTUATORS**

### WHAT IS THE RSX?

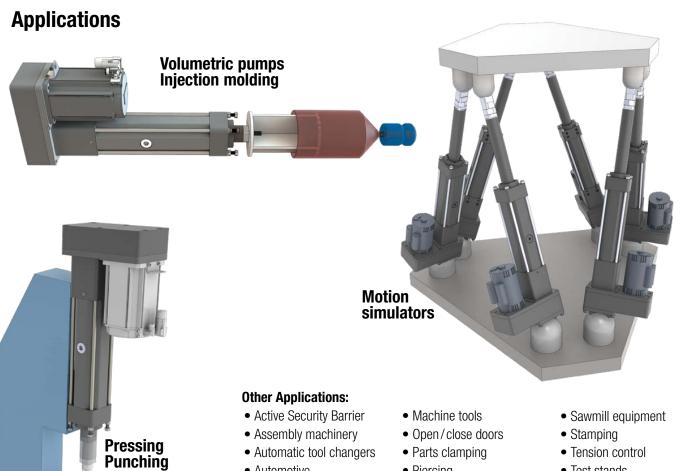

The RSX is an extreme force electric actuator designed for rugged service, long life and is an ideal choice for replacing hydraulic cylinders. The RSX utilizes roller screws for long lasting consistent performance. Additionally, the RSX uses Tolomatic's popular Your Motor Here program which allows RSX to easily mount many servo motor and gearboxes on the market.

Tolonatic EXCELLENCE IN MOTION www.tolomatic.com RSX<sub>3</sub>

# RSX ELECTRIC ROD-STYLE ACTUATOR

# **○ENDURANCE TECHNOLOGY**

Endurance Technology features are designed for maximum durability to provide extended service life.

The RSX series high force electric actuators with planetary roller screws are designed for rugged service, long life and are an ideal choice for replacing hydraulic cylinders.

# SUPERIOR CONSTRUCTION CONSTRUCT

- Steel parts are black or clear zinc plated for corrosion resistance
- Aluminum parts are Type III hardcoat black anodized for high surface hardness

### **OIP65 STANDARDO**

 Protection against dust and water spray (static)

### OIP67 OPTIONO

 Resist water ingress 1m deep for up to 30 min (static)

# YOUR MOTOR HERE SYOU CAN CHOOSE:

- Specify the motor to be installed and actuator ships with proper mounting hardware
- •Specify and ship your device to Tolomatic for factory installation

### HIGH POSITIONAL ACCURACY

**SCREW ACCURACY** 

Roller Nut  $\pm 0.0102$ mm/300mm  $\pm 0.0004$ "/ft.

# FIELD REPLACEABLE

- Scraper and dual seal design prevent contaminants from entering the housing for extended life of the actuator
- One piece assembly designed for easy field replacement

### **OTHRUST TURFO**

- Steel thrust tube supports extremely high force capabilities
- •Salt bath nitride treatment provides excellent corrosion resistance, surface hardness and is very resistant to adherence of potential contaminants

•Unique nose bearing material allows for smooth operation

### **OLUBE ACCESS PORTO**

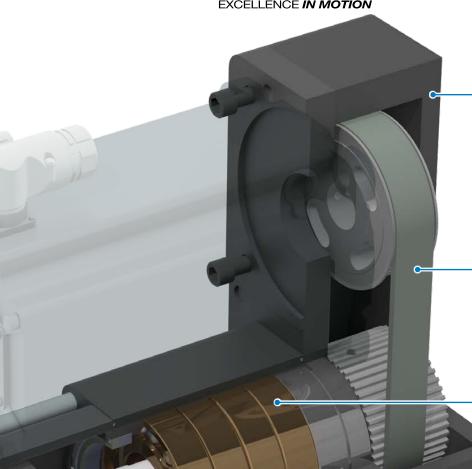

- •This re-lubrication system provides extended screw service life
- •Convenient lubrication without disassembly
- Grease zerk fitting

### ONOSE BEARING

- Support the thrust tube and nut assembly through entire stroke length
- Bumpers protect the screw and nut assembly from damage at both ends of stroke

# **Tolomatic...MAXIMUM DURABILITY**

### MOTOR ORIENTATION •

### YOU CAN CHOOSE:

- •Inline option directly couples the driving shaft
- Reverse-parallel option minimizes the overall length and offers a belt reduction drive with a 1:1 or 2:1 ratio

### ⇒HIGH POWER TIMING BELT∘

• Carbon fiber tensile reinforced synchronous belt to ensure smooth transmission of high torques in a compact design.

# HIGH FORCE ANGULAR CONTACT BEARINGS

•Four ball bearings to support high axial loads & forces for long life

# **OBREATHER/PURGE PORTSO**

 Precision ground planetary roller screws provide the highest force and life ratings available

### ⇒INTERNAL ANTI-ROTATE•

•Composite bearings prevent rotation of the thrust tube

- •Standard feature on RSX actuators
  - Located on both the bottom and the opposite side of the actuator

•Use as Breather

**Port:** allows air flow into the interior of the actuator. Prevents additional load on the motor caused by air buildup due to fast cycling of the RSX.
Use as **Purge Port:** positive pressure with

Use as **Purge Port:** positive pressure with air lines and filters ensure contaminants do not enter the interior of the actuator.

### MOUNTING OPTIONS

- Front Flange Extended Tie Rods
- Trunnion
- Mounting Plates
- Rear Clevis

### ROD END OPTIONS

- Rod Clevis
- Threaded Rod (standard)
- Extended Rod

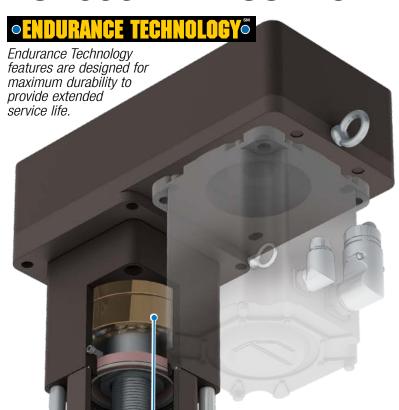

### SENSOR OPTIONS

- •Solid state NPN. PNP or reed
- •Tie Rod Clip

# RSX096P PRESS MODEL

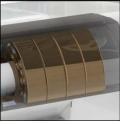

The RSX096P press actuator expands the extend force capability to 40,000 lbf (178 kN) making it well suited for applications such as pressing, riveting, clinching and many others. The RSX096P press model has all the features of the standard RSX on pages 4 & 5 plus oversized tie rods, a bearing system optimized for high force extend, and a high strength steel front flange.

### ◆OPTIMIZED BEARING SYSTEM●

 Angular contact bearing system is designed to handle high axial forces and loads common to press applications

# OVERSIZED TIE RODS

•Increased system strength to handle up to 40,000 lbf (177.9 kN) in extend; 15,000 lbf (66.7 kN) in retract

### HIGH STRENGTH →STEEL FRONTO FLANGE

 Durability to meet the demands of high force and stress applications

# **FOOD GRADE RSX**

Contact Tolomatic for lead time and application review.

Endurance Technology features are designed for maximum durability to provide extended service life.

The food grade RSX has all the features of the RSX shown on the previous pages plus additional features that are suited to challenging environments: 316 Stainless steel thrust rod, rod end, tie rods, fasteners; food grade white paint; IP67 rating; and food grade grease. The food grade RSX is a great option for the food & beverage processing environment.

 316 series stainless stee for corrosion resistance

### STAINLESS STEEL • RE-LUBRICATION ← PORT

- Lubrication access cover
- •316 series stainless steel for corrosion resistance
- Grease zerk fitting

### ⇒FOOD GRADE PAINT∘

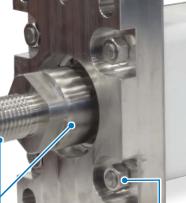

- •FDA & USDA approved
- White paint reveals any foreign matter to ease clean-up

### **SMOOTH BODY DESIGNS**

• Fewer collection points for contaminants in wash-down environments

### ostainless steel rods?

•316 Stainless steel tie rods for corrosion resistance and strength

### STAINLESS STEEL THRUST ROD & O

• Corrosion resistant 316 series stainless steel thrust rod and rod end

# 316 SERIES STAINLESS STEEL FASTENERS

- Stainless steel fasteners for corrosion resistance
- Hex bolts for fewer collection points for contaminants in washdown environments

### • IP67 STANDARD

- •Static tested against ingress of dust and water for protection of internal components and long actuator life
- IP67: Ingress Protection: First Digit = Solids, 6 = Dust Tight (No ingress of dust; complete protection against contact)
  Second Digit = Liquids, 7 = Immersion up to 1 m (Ingress of water in harmful quantity shall not be possible when the enclosure is immersed in water under defined conditions of pressure and time up to 1 m of submersion)

Contact Tolomatic for lead time and application review of Food Grade RSX

### SIZE: ALL: CRITICAL SPEED CAPACITIES\*

SIZE: ALL: SCREW BUCKLING LOAD\*

\*NOTE: When using Trunnion Mount, (TRR) consider the stroke to be longer when determining Critical Speed and Buckling Load:

	mm	in
RSX080	68.1	2.68
RSX096(P)	72.4	2.85

### **ROLLER SCREW LIFE ESTIMATE**

### **PERFORMANCE**

### **RSX Standard Actuators Expected Life:**

NOTE: The L<sub>10</sub> expected life of a ball or roller screw linear actuator is expressed as the linear travel distance that 90% of properly maintained ball or roller screw manufactured are expected to meet or exceed. This is not a guarantee and this graph should be used for estimation purposes only.

The underlying formula that defines this value is:  $\mathbf{L}_{10} = \left(\frac{\mathbf{C}}{\mathbf{P}}\right)^3 \bullet \oint_{-\Xi}$ 

L<sub>10</sub>Travel life in millions of units (in or mm), where:

**C** = Dynamic load rating (lbf) or (N) **P**<sub>e</sub> = Equivalent load (lbf) or (N)

If load is constant across all movements then:

actual load = equivalent load = Screw lead (in/rev) (mm/rev)

Use the "Equivalent Load" calculation below, when the load is not constant throughout the entire stroke. In cases where there is only minor variation in loading, use greatest load for life calculations.

$$\textit{Where:} \quad \textbf{P}_{e} = \sqrt[3]{\frac{ \text{L}_{1}(\textbf{P}_{1})^{3} + \text{L}_{2}(\textbf{P}_{2})^{3} + \text{L}_{3}(\textbf{P}_{3})^{3} + \text{L}_{n}(\textbf{P}_{n})^{3} }{\text{L}}}$$

 $\mathbf{P}_{e}$  = Equivalent load (lbf) or (N)

 $\mathbf{P}_{n}$  = Each increment at different load (lbf) or (N)

**L** = Total distanced traveled per cycle (extend + retract stroke)  $[L = L_1 + L_2 + L_3 + L_n]$ 

L<sub>n</sub>= Each increment of stroke at different load (in) or (mm)

### **RSX096P Press Model Expected Life:**

The RSX096P (RSX Press Model) L10 expected life calculation is modified to consider only high force press (or similar) cycles. The calculation is modified because in applications such as pressing (or similar), repeated high force cycles on the same position of the roller screw will focus the stress in one area or location which may limit the life of the device. In the standard L10 calculation, the lower force motion segments may significantly lower the equivalent load leading to an inflated life estimation. This modified L10 expected life calculation for press (or similar) applications with the high force segment over a distance of one screw lead or less results in the following life estimation graph:

**NOTE:** The L10 life estimation method does not include failures caused by other conditions such as contamination, misalignment, improper lubrication and exceeding actuator specifications

### **RE-LUBRICATION RECOMMENDATION:**

Lubrication requirements for electric actuators depend on the motion cycle (velocity, force, duty cycle), type of application, ambient temperature, environmental surrounding and various other factors.

For many general purpose applications, Tolomatic ball screw actuators are typically considered lubricated for life unless otherwise specified, such as those actuator models outfitted with a re-lubrication feature. For roller screw or ball screw actuators outfitted with a re-lubrication feature, Tolomatic recommends to re-lubricate the actuator at least once per year or every 1,000,000 cycles, whichever comes first, to maximize service life. For more demanding applications such as pressing, high frequency or other

highly stressed applications, the re-lubrication interval for these actuators will vary and will need to be more frequent. In these demanding applications, it is recommended to execute at least 5 full stroke moves every 5,000 cycles of operation (or more frequent if possible) to re-distribute the grease within the actuator.

Re-lubricate with Tolomatic Grease into the grease port located on the side of the actuator.

### **EXTENDED TIE ROD OPTION (XT)**

A = Customer Specified Length

### **IMPERIAL THREAD OPTION (SRI)**

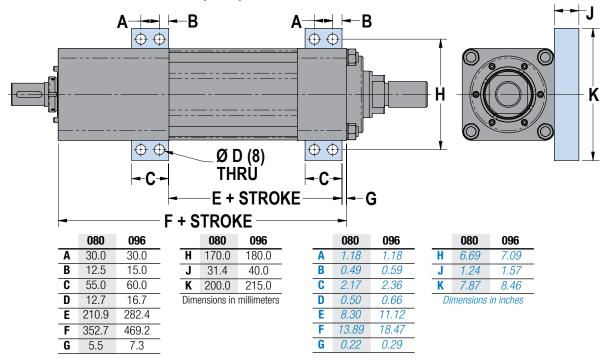

3D CAD available at www.tolomatic.com

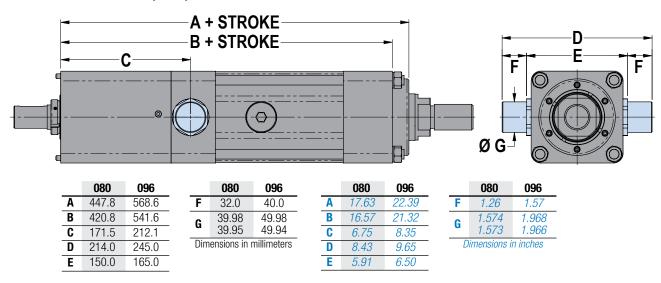

Always use configurated CAD solid model
to determine critical dimensions

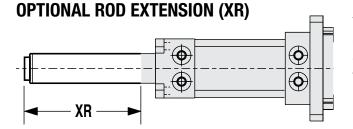

### **MOUNTING PLATE OPTION (MP2) DIMENSIONS**

### TRUNNION OPTION (TRR) DIMENSIONS

The thrust rod length can be extended by specifying the rod extension option. This does not increase the working stroke, only the length of the thrust rod.

NOTE: Please consult Tolomatic if your application requires rod extension length greater than 100 mm (3.9 in).

### **SWITCHES**

RSX actuators offer a wide range of sensing choices. There are 12 switch choices: reed, solid state PNP (sourcing) or solid state NPN (sinking); in normally open or normally closed; with flying leads or quick-disconnect.

Commonly used for end-of-stroke positioning, these switches allow installation anywhere along the entire actuator length. The internal magnet is a standard feature. Switches can be installed in the field at any time.

Switches are used to send digital signals to PLC (programmable logic controller), TTL, CMOS circuit or other controller device. Switches contain reverse polarity protection. Solid state QD cables are shielded; shield should be terminated at flying lead end.

All switches are CE rated and are RoHS compliant. Switches feature bright red or yellow LED signal indicators; solid state switches also have green LED power indicators.

\*QD = Quick-disconnect

Enclosure classification IEC 529 IP67 (NEMA 6)

CABLES: Robotic grade, oil resistant polyurethane jacket, PVC insulation

\*\*WARNING: Do not exceed power rating (Watt = Voltage x Amperage). Permanent damage to sensor will occur.

### SWITCH INSTALLATION

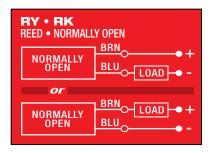

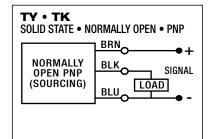

Place switch bracket onto any one of the four tie rods that run the length of the extruded tube. Insert the switch with set screw and the word "Tolomatic" facing up and slide into the mating slot on the bracket. Position the bracket with the switch to the exact location desired, with the bracket tight to the surface of the extrusion, then lock the bracket securely into place by tightening the set screw with the Allen wrench provided. Then tighten the switch into the bracket with a small slotted screwdriver.

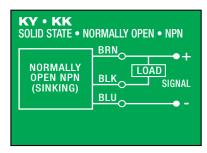

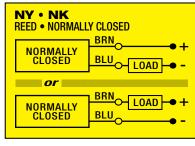

### **SWITCHES**

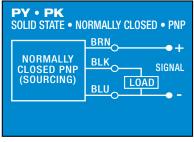

### **WIRING DIAGRAMS**

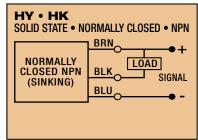

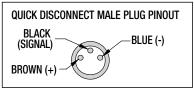

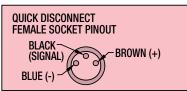

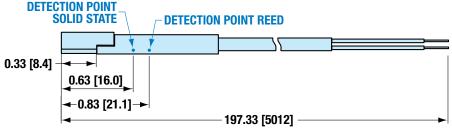

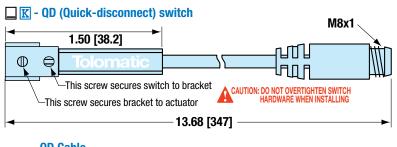

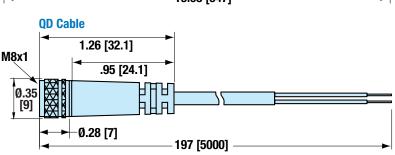

### **SWITCH DIMENSIONS**

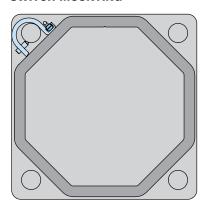

### **SWITCH MOUNTING**

The switch bracket and switch does not extend beyond the profile of the RSX heads.

### **Selection Guidelines**

Using the application stroke length, desired cycle time, loads and forces, establish the motion profile details including linear velocity and force in each of its segments.

SELECT ACTUATOR SIZE AND SCREW TYPE

Based on the required velocities and forces, select an actuator size including the lead of the roller screw assembly..

Serify CRITICAL SPEED OF THE SCREW

Verify that the application's peak linear velocity does not exceed the critical speed value for the size and lead of the screw selected.

VERIFY AXIAL BUCKLING STRENGTH OF THE SCREW

Verify that the peak force does not exceed the critical buckling force for the size of the screw selected.

5 COMPARE APPLICATION'S PEAK PARAMETERS TO PEAK CAPACITY (PEAK REGION) OF SELECTED ACTUATOR

Calculate the application's required peak force and peak velocity and compare to the graphs. The selection must satisfy the application's peak requirements.

**CONSIDER LUBRICATION INTERVAL**Evaluate the recommended lubrication interval with respect to the application motion profile.

See page RSX\_7 for complete lubrication information.

The above guidelines are for reference only.
Use Tolomatic online sizing software for best results.

### TEMPERATURE CONSIDERATIONS

If the application's ambient temperature lies outside of the standard range (see page RSX\_8), contact Tolomatic.

# SELECT A MOTOR-ACTUATOR CONFIGURATION

Select an inline or a reverse-parallel motor configuration.

# ESTABLISH TOTAL TORQUE REQUIREMENTS

Calculate total system inertia, the peak and the RMS torque required from the motor to overcome internal friction, external forces and accelerate/decelerate the load.

SELECT A MOTOR

Use the obtained total torque value to select a motor and a reduction device (if required). Verify that the peak torque value is below the motor's peak torque curve, and that the continuous torque value is below the motor's continuous torque curve. Verify the minimum torque margin (15%). Verify the inertia match.

SELECT OPTIONAL POSITION SENSORS

12 sensor choices include: reed, solid state PNP or NPN, all in normally open or normally closed, with flying leads or quick-disconnect couplers.

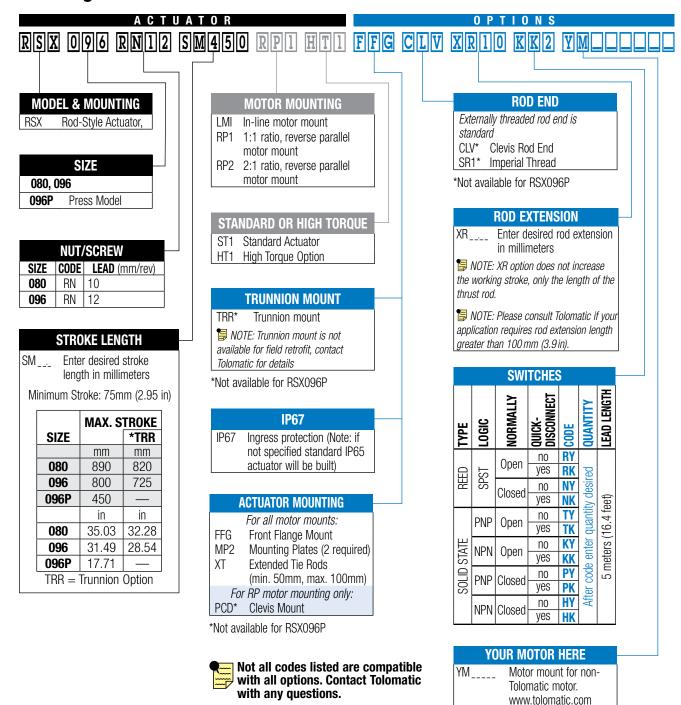

SELECT ACTUATOR MOUNTING

Mounting options include: TRN trunnion mount,
FFG front flange mount, MP2 mounting plates,
PCD clevis mount.

SELECT ROD END OPTIONS
Rod end options include: CLV clevis rod end.

### **Ordering**

# The Tolomatic Difference Expect More From the Industry Leader:

Unique linear actuator solutions with Endurance Technology<sup>SM</sup> to solve your challenging application requirements.

The fastest delivery of catalog products... Built-to-order with configurable stroke lengths and flexible mounting options.

Online sizing that is easy to use, accurate and always up-to-date. Find a Tolomatic electric actuator to meet your requirements.

Match your motor with compatible mounting plates that ship with any Tolomatic electric actuator.

Easy to access CAD files available in the most popular formats to place directly into your assembly.

Extensive motion control knowledge: Expect prompt, courteous replies to any application and product questions from Tolomatic's industry experts.

# **Also Consider These Other Tolomatic Products:**

### **Electric Products**

Rod & Guided Rod Style Actuators, High Force Actuators, Screw & Belt Drive Rodless Actuators, Motors, **Drives and Controllers** 

"Foldout" Brochure #9900-9074

### **Pneumatic Products**

Rodless Cylinders: Band Cylinders, Cable Cylinders, Magnetically Coupled Cylinders/Slides; Guided Rod Cylinder Slides

"Foldout" Brochure #9900-9075

### **Power Transmission Products**

Gearboxes: Float-A-Shaft®, Slide-Rite®; Caliper Disc Brakes; Planetary Roller Screws

"Foldout" Brochure #9900-9076

# **EXCELLENCE IN MOTION**

**COMPANY WITH QUALITY SYSTEM CERTIFIED BY DNV GL** = ISO 9001 = Certified site: Hamel, MN
