

Nothing Protects Like Concrete...

And Concrete Never Looked So Good

SUPERIOR
CONCRETE PRODUCTS

SECURE YOUR SUBSTATION WITH ONE OF OUR MANY TEXTURED CONCRETE WALLS.

**WE DESIGN, ENGINEER, MANUFACTURE, AND
INSTALL A VARIETY OF STYLES UP TO 30' HIGH.**

Security is a beautiful thing. With Superior Concrete Products, you can get the absolute best screening walls in the world — made in the USA — and designed to maintain the aesthetics of your environment along with the property they're protecting.

Since 1986, our full-service manufacturing and construction company has provided a complete range of NPCA-Certified precast concrete building systems.

Superior Concrete Products manufactures and installs screening walls, perimeter fences, retaining walls, sound barriers, highway walls, and more. Each product is created to look and feel like stone, brick, stucco or wood — blending into their surroundings naturally, and proving, that real beauty can last a lifetime.

SECURITY ENHANCEMENTS

Gates Available
Superior Concrete Products can incorporate various styles of gates into your perimeter.

Perimeter Height
Superior Concrete Products screening walls can be engineered to a height of 30' to meet additional security threats.

Barbed Wire Security
Galvanized steel barbed wire can provide high security for substations and an effective deterrent against intrusion.

Ballistics Protection
Superior Concrete Products screening walls can be engineered with ballistics protection for high threat areas.

KEEP YOUR POWER PROTECTED WITH SUPERIOR SECURITY FEATURES

Protect the future of your city by protecting its power source with a wall that's strong enough to stand the test of time, while blending into the architecture of its community.

With Superior Concrete Products screening walls, your substation is surrounded by security, 24/7. Our precast walls can be built up to 30-feet high with the option of galvanized steel barbed wire to ward off intruders. And our stylish gates open and close easily, providing convenient access for employees and management.

Real World Appeal

Superior Concrete Products precast screening walls provides the natural look of wood, brick, stone or stucco along with many other visually appealing textures.

Mirrored Textures

Superior Concrete Products precast screening walls incorporate our unique, natural looking texture on both sides of the precast wall.

CONCRETE IS BEAUTIFUL

Environmental Aesthetics

The visual texture produced by Superior Concrete Products allows screening walls to blend seamlessly into the environment — much like a beautiful piece of architecture.

CONCRETE NEVER LOOKED SO GOOD

We believe that strong is beautiful. That's why all of our concrete products are designed to enhance the natural aesthetics of their environments, while protecting substations with the highest security features available in the world.

With Superior Concrete Products, you're combining design with safety to complement the natural landscape.

Height Options

Our concrete screening walls can be built up to 30-feet high to maintain privacy and protection, but most substation walls are 8' to 12' in height.

A HIGH LEVEL OF PRIVACY

CREATING PRIVACY THAT BLENDS INTO THE LANDSCAPE

A function of a solid screening wall is two-fold: It keeps your property protected and it creates privacy for the owner and the facility. With Superior Concrete Products, we offer a third benefit — a wall that blends into the landscape so seamlessly that it often goes unnoticed.

Whether our wall is part of an existing landscape, adjacent to a busy road, or in the center of a rural location, not getting noticed is our greatest compliment. Because blending into the scenery while protecting your property makes Superior Concrete a smart investment for your community.

**LESS NOISE, HIGHER
QUALITY OF LIFE**

REDUCING NOISE POLLUTION SOUNDS GOOD

In our busy and hectic world, silence is golden. Reducing noise pollution is just another way Superior Concrete Products add to the quality of life in your community.

Our precast walls are constructed and engineered to meet local wind loads in each individual location. This creates a barrier between the sounds of traffic and the homes nearby. Our precast screening walls reduce noise when installed close to roadways, buildings, and homes.

Protection + Security = Peace Of Mind

VALUE ADDED SECURITY

WE IMPROVE YOUR PROPERTY VALUE

Don't just build a fence to protect your substation, create a piece of architecture that adds value to your community. With Superior Concrete Products, we can enhance the look of homes in a neighborhood by turning a substation into another beautiful piece of the landscape, while maintaining the architectural integrity of the homes surrounding it.

**TALLER, BETTER,
FASTER, STRONGER**

WE'VE GOT JUST YOUR SIZE

Large or small, short or tall, each Superior Concrete Products screening wall is built to your specific standards. Our walls can be constructed up to 30-feet tall, keeping your substation secure and property values high. And we get the job done without bringing large, loud, or invasive machinery into your community. Our teams of highly qualified experts design your precast wall quickly and install it efficiently.

GATED ENTRY, SUPERIOR SECURITY

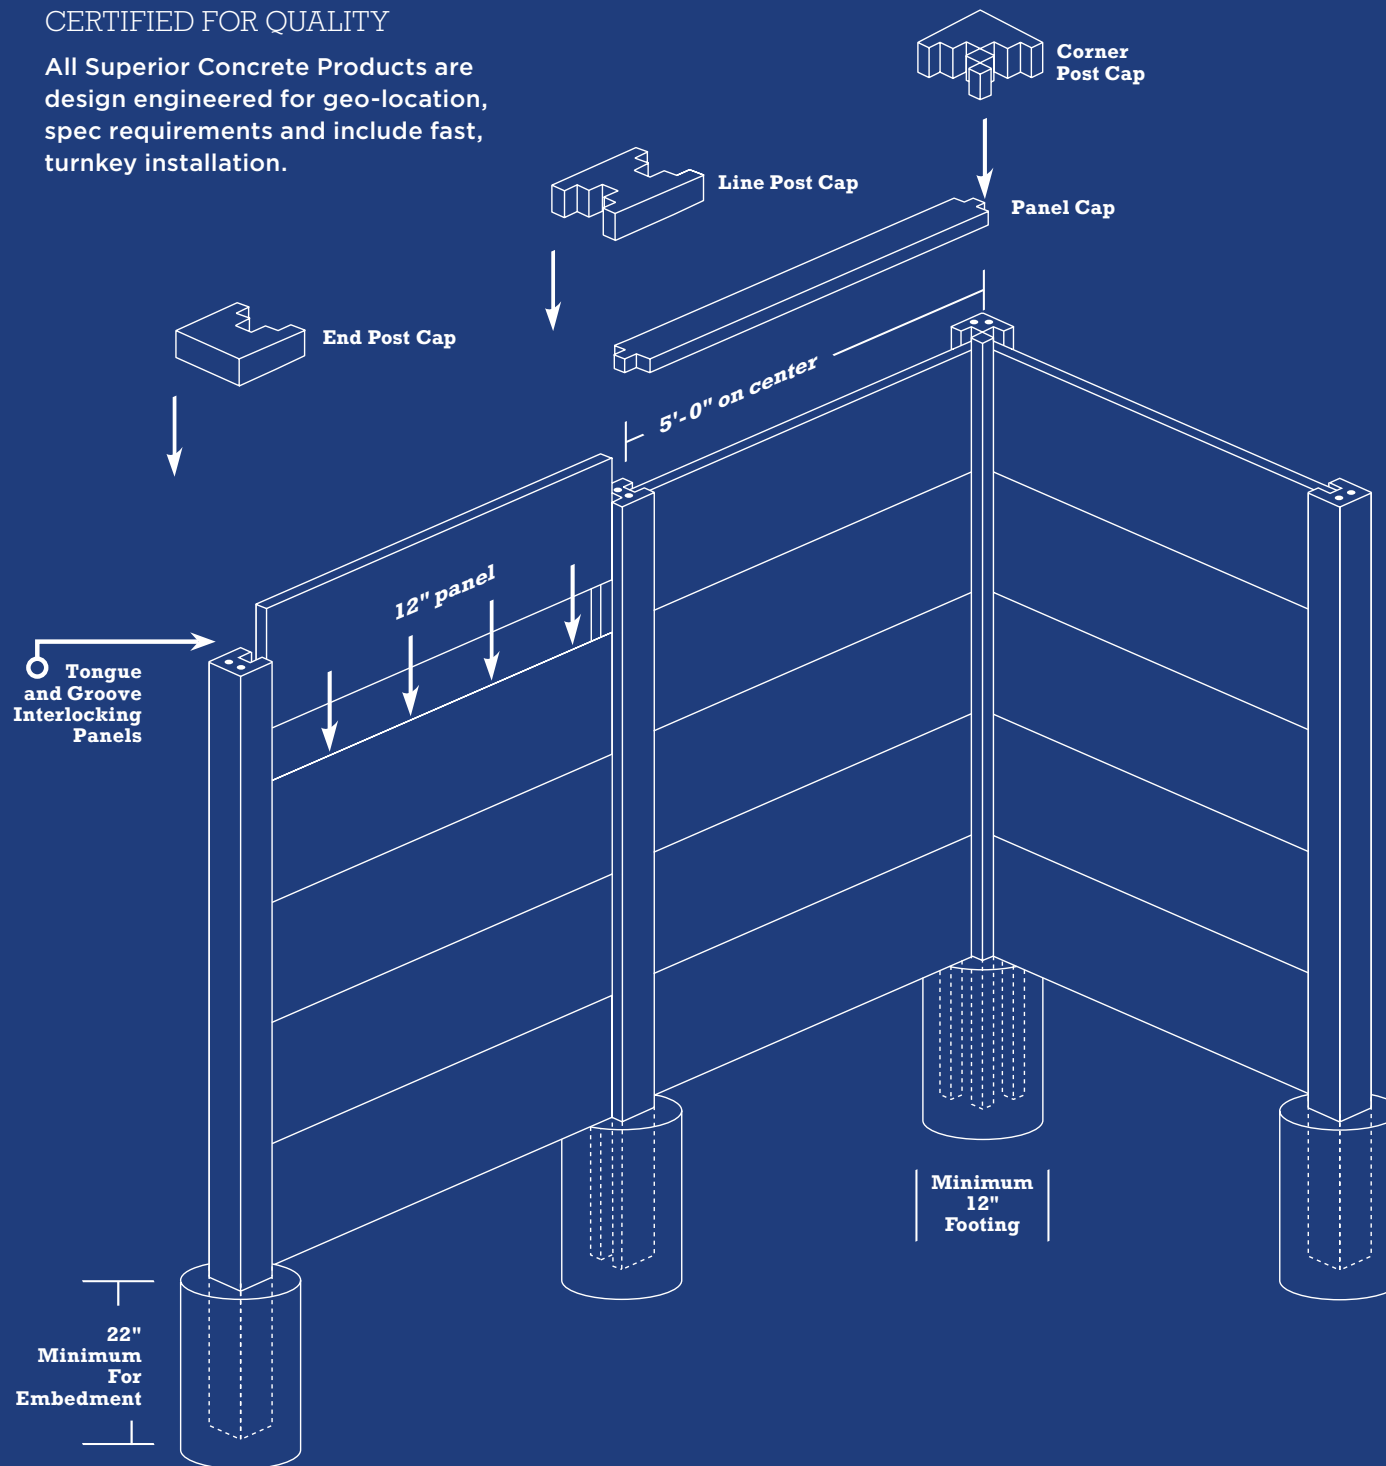

THE BEST GATES: AN OPEN AND CLOSED CASE

Make access to your substation simple and secure with a gate from Superior Concrete Products. Our gates complement your specially designed precast, textured wall and give designated personnel quick access to the substation for regular maintenance or emergencies. Choose from a variety of gates that seamlessly blend form and function to create another layer of security and beauty in your community.

SUPERIOR CONCRETE PRODUCTS MODULAR WALL SYSTEM

MADE IN THE USA AND
CERTIFIED FOR QUALITY

All Superior Concrete Products are design engineered for geo-location, spec requirements and include fast, turnkey installation.

INSTALLATION THAT'S EASY ON THE COMMUNITY

Precast concrete walls aren't only beautiful, they're also a lot easier to install than other walls. That means a Superior Concrete Products screening wall can be constructed quickly, quietly, and easily — without bringing large, invasive pieces of machinery into your community.

UNIQUE BENEFITS

- The look of wood, brick, stucco or stone with the same texture on both sides
- Superior strength, security, and the lifetime durability of concrete
- Modular units are easy to move and expand
- Functional in all climates and impervious to termites
- Can't rot or easily burn
- Architecturally can be designed with wrought iron, gates, and masonry columns
- Effective barrier against sound and wind
- Guarantees privacy
- Get the color right, with 12 integral standard colors available
- 5-year limited warranty

TECHNICAL INFORMATION

- Integrated color and concrete are thoroughly mixed and attain a minimum strength of 5,000 PSI at 28 days
- Steel reinforced posts, panels, caps and rails. Rebar conforms to ASTM 615, grade 60
- I-Beam shaped posts are installed in concrete post hole piers. Typically 5'-0" to 8'-0" on center
- Post footing depth varies with local codes, soil conditions, wind load and wall height
- Foundations: Site specific geo-technical information is used for each design
