

Station Pine | Sand

Easy on the eyes. And the environment.

Restoration Collection® offers beautifully restored wood looks in durable, high-performance laminate flooring. And it's friendlier for the environment in several meaningful ways.

96% BIO-BASED (WOOD)

The floor is recyclable! After its useful life it can be chipped into mulch, for example, rather than being put in a landfill.

PRINTED WITH WATER-BASED LOW-VOC INK

VOCs are a source of air pollution. Using low-VOC ink is better for the planet. And simulating woodgrains through digital printing means no rare or precious woods are cut down to make the floor.

HIGH POST-INDUSTRIAL RECYCLED CONTENT (OVER 70%)

Reduces the environmental impact of manufacturing the floor.

NORTH AMERICAN LAMINATE FLOORING ASSOCIATION (NALFA) CERTIFIED

NALFA uses independent, third-party testing laboratories to assure that NALFA-certified laminate floors meet demanding performance standards. The NALFA certification seal is proof that Restoration Collection® is:

- Recyclable
- Made with natural materials
- Comprised of recycled content that may contribute to Leadership in Energy and Environmental Design (LEED) points
- CARB Phase II compliant
- Free of air-damaging chemicals
- Installed without requiring special glues or adhesives (eliminating VOCs) or special cleaners for proper cleaning and maintenance (improving air quality)

FloorScore® CERTIFIED

Means Restoration Collection® complies with strict indoor air-quality standards.

100% MADE IN THE USA

Restoration Collection® is made in the USA, reducing carbon emissions created when transporting products from overseas.
