

## **Mannington Mills, Inc. (“Mannington”) Statement Regarding Per- and Polyfluoroalkyl Substances (“PFAS”)**

Mannington is committed to product stewardship, regulatory compliance, and responsible material selection across its flooring product lines. As part of our ongoing product development and chemical management processes, we evaluate available information regarding chemicals of concern—including PFAS—through a combination of supplier-provided data, a proprietary materials screening program informed by national, international, and industry-recognized restricted substance lists, and monitoring of applicable regulatory requirements.

### **Phase-Out of Known PFAS**

Beginning in 2017, Mannington initiated a phased effort to eliminate known PFAS from its product formulations. This phase-out addressed PFAS in our products, including intentionally added PFAS, where PFAS are deliberately used in a product or any component thereof to provide a specific functional or technical effect, and PFAS present as known byproducts or impurities, meaning PFAS identified through supplier disclosures, testing data, or other information reasonably available to Mannington as occurring in raw materials or components, even where not deliberately added for a functional purpose.

Based on supplier certifications, internal records, and information reasonably available to Mannington at the time, this phase-out of PFAS from Mannington’s product formulation was successfully completed in 2019.

### **Current Product Status**

Mannington explicitly prohibits the use of materials containing PFAS i. To the best of Mannington's knowledge and based on information obtained annually through its chemical management program and supplier compliance requirements, Mannington's flooring products are not formulated with products that are known to contain PFAS. Mannington notes that PFAS are widely present in the environment, including in many municipal water supplies used in manufacturing processes across industries. This statement addresses the intentional formulation of Mannington's products and its suppliers’ raw materials and does not constitute a representation regarding trace environmental sources that may be present in incoming municipal water.

### **Limitations of This Statement**

This statement addresses intentionally added PFAS and PFAS known to be present as byproducts or impurities based on information reasonably available to Mannington. It does not constitute a guarantee regarding the complete absence of PFAS. PFAS encompass a broad class of thousands of chemical substances that are widely present in the global environment and commercial supply chains at trace concentrations. Because trace-level PFAS may occur through environmental background contamination, incidental contact during manufacturing or distribution, or the presence of PFAS as unidentified or undetectable byproducts or impurities in raw materials—circumstances that may be outside a manufacturer's direct control or knowledge—Mannington does not represent that its products are entirely free of all PFAS at any concentration.

### **Ongoing Compliance and Oversight**

Mannington maintains processes designed to support continued compliance with evolving PFAS regulations and to ensure that its products remain free of known concentrations of PFAS, including:

- Monitoring federal, state, and international regulatory developments related to PFAS in consumer products;
- Reviewing and maintaining supplier declarations and certifications regarding restricted and prohibited substances;
- Enforcing Mannington's Supplier Code of Conduct, which requires suppliers to comply with Mannington's expectations regarding PFAS and other prohibited substances;
- Periodically reviewing this statement to ensure alignment with current regulatory definitions and requirements.

### **Contact and Additional Information**

Stakeholders with questions about Mannington's chemical management program or this statement are invited to contact us at [corporate.responsibility@mannington.com](mailto:corporate.responsibility@mannington.com).
