Start date: Flexible, asap

Compensation: Competitive

Fision is a startup technology company based in Zurich. Our passionate team of skilled engineers and business developers is building and operating SaaS solutions addressing the challenges of the apparel industry, enabling our corporate clients to better serve their end customers online.

At the core of our company are breakthrough technologies that will revolutionize the online shopping experience. As a platform engineer you will bring together these technologies to make them easily accessible to a global audience. Using cutting edge tools like Docker, Kubernetes and the Google Cloud Platform you will collaborate in an agile team to build highly scalable, maintainable and secure microservice systems that enable virtual shopping experiences around the globe. Being part of the cross-functional platform team also lets you develop the customer facing web & mobile applications that build on our cloud backend to provide the services that matter to our customers.

We are looking forward to you helping us shape the future of virtual shopping!
