

Trip Note PROS

GLOSSARY OF TERMS

1. Fake Fast pace: Pace analysis tools will be incorrect in this situation because in 'fake fast' situations, pacesetters are **CORRECTLY IGNORED** by riders that identify a 'runoff leader' that is going too fast early. This results in a pack that is running "a race within a race." Don't be too quick to downgrade Closers in such situations!
2. Accordion Flow: An 'accordion flow' is a dynamic that mostly occurs in turf routes. When leaders are successful in "backing down the pace" to catch a breather before sprinting for home, the field can crunch together before stretching out again, sometimes causing traffic issues for the back markers. In the majority of these instances, speed types and ground savers are the runners to benefit.
3. L: This is merely an abbreviation for "length."
4. "Tight" in-between vs "Loose" in-between : In-between racing is common in larger fields. "Tight" in-between positions cause stress and leave runners with tough options: (1) Progress and run the risk of moving too early. (2) Idle to move backwards results in position and ground loss. (3) Remaining in the same spot will likely result in the burning of needed energy.
5. Gapped leaders: Imagine a runoff leader and then (1) or (2) more rivals with a big advantage to the rest of the pack. These leading runners are out of position and chasing a leader that is **VERY LIKELY** going too fast early. Situations with "gapped leaders" offer a **HUGE** advantage to the Closers

TRIP NOTE: ON TURF: He traveled 3+W through the first turn, and landed in midpack while 3W on the backstretch; not the greatest beginning given the ground covered and his position vs the pace. He raced 3W down the backstretch, 2+W into and through the far turn while dealing with some in-between spots, and was slightly outfinished in the lane. A tough trip vs the pace 'on turf,' he draws well as he moves to the dirt.
