INF600 Series

Info alert flip up/flip down

InfoAlert LED is the latest range of vehicle signs that have it all - they have been best-process-developed for maximum and effective use. Put simply, they offer multiple options in all applications, territory and adverse conditions. They have integral, alternating LED lights and are engineered with two levels of hazard warning. The design, of course, is innovative - the LED lights alternate blue and red allowing the InfoAlert system to become essential equipment in both general purpose and 'high end' police vehicles. Needless to say, the state-of-the-art system complements all emergency vehicles. High-quality LED units puts InfoAlert ahead of the pack because they deliver crystal-clear character recognition that are available in both red or amber. With fixed or scrolled text, the scope of functionality offers messaging options to cover any situation, environment or task.

Features and Benefits

- 10 - 16VDC
- Unique Design incorporating Integral Warning Lights
- 3 model range: flip-up, flip-down, fixed
