

Fallout
NEW VEGAS
ULTIMATE EDITION

GAME MANUAL

Bethesda

PRECAUTIONS

• This disc contains software for the PlayStation®3 system. Never use this disc on any other system, as it could damage it. • This disc conforms to PlayStation®3 specifications for the PAL market only. It cannot be used on other specification versions of PlayStation®3. • Read the PlayStation®3 system Instruction Manual carefully to ensure correct usage. • When inserting this disc in the PlayStation®3 system always place it with the required playback side facing down. • When handling the disc, do not touch the surface. Hold it by the edge. • Keep the disc clean and free of scratches. Should the surface become dirty, wipe it gently with a soft dry cloth. • Do not leave the disc near heat sources or in direct sunlight or excessive moisture. • Do not use an irregularly shaped disc, a cracked or warped disc, or one that has been repaired with adhesives, as it could lead to malfunction.

HEALTH WARNING

Always play in a well lit environment. Take regular breaks, 15 minutes every hour. Discontinue playing if you experience dizziness, nausea, fatigue or have a headache. Some individuals are sensitive to flashing or flickering lights or geometric shapes and patterns, may have an undetected epileptic condition and may experience epileptic seizures when watching television or playing videogames. Consult your doctor before playing videogames if you have an epileptic condition and immediately should you experience any of the following symptoms whilst playing: altered vision, muscle twitching, other involuntary movement, loss of awareness, confusion and/or convulsions.

PIRACY

The unauthorised reproduction of all or any game part of this product and the unauthorised use of registered trademarks are likely to constitute a criminal offence. Piracy harms consumers as well as legitimate developers, publishers and retailers. If you suspect this game product is an unauthorised copy, or have any other information about pirate product, please call your local Customer Service number given at the back of this manual.

PAN EUROPEAN GAMES INFORMATION (PEGI) AGE RATING SYSTEM

The PEGI age rating system protects minors from games unsuitable for their particular age group. PLEASE NOTE it is not a guide to gaming difficulty. For further information visit www.pegi.info.

Comprising three parts, PEGI allows parents and those purchasing games for children to make an informed choice appropriate to the age of the intended player. The first part is an age rating:

The second part of the rating may consist of one or more descriptors indicating the type of content in the game. Depending on the game, there may be a number of such descriptors. The age rating of the game reflects the intensity of this content. The descriptors are:

The third part is a label indicating the game can be played online. This label may be used only by online game providers who have committed to uphold standards which include the protection of minors in online gameplay:-

For further information visit
www.pegionline.eu

See back page of this manual for Customer Service Numbers.

SYSTEM SOFTWARE UPDATES

For details about how to perform System Software updates for the PlayStation®3 system, visit eu.playstation.com or refer to the PS3™ system's Quick Reference document.

PARENTAL CONTROL

This product has a preset Parental Control Level based on its content. You can set the Parental Control Level on the PlayStation®3 system to restrict the playback of a product with a Parental Control Level that is higher than the level set on the PS3™ system. For more information, please refer to the PS3™ system Instruction Manual.

This product is classified according to the PEGI rating system. The PEGI rating marks and content descriptors are displayed on the product package (except where, by law, another rating system applies). The relationship between the PEGI rating system and the Parental Control Level is as follows:

PARENTAL CONTROL LEVEL	PEGI RATING AGE GROUP
9	18
7	16
5	16
3	7
2	3

In rare cases, the Parental Control Level of this product may be higher than the age rating which applies in your country, because of differences in the age rating systems in the various countries in which this product is sold. You may need to reset the Parental Control Level on your PS3™ system to enable play.

PLAYING THE ADDITIONAL CONTENT

No installation is necessary. All additional content will be available when a new or saved game is started.

DEAD MONEY

For Dead Money, a new radio signal will appear, notifying the player to track down the source of the Sierra Madre invitation, with a new map marker and quest objective, "Sierra Madre Grand Opening!"

HONEST HEARTS

For Honest Hearts, a new radio signal will appear, notifying the player to find the Happy Trails caravan master, Jed Masterson, with a new map marker and quest object, "Happy Trails Expedition."

OLD WORLD BLUES

For Old World Blues, a new radio signal will appear, notifying the player to investigate the midnight showing at the Mojave Drive-in, with a new map marker and quest objective, "Midnight Science-Fiction Feature!"

LONESOME ROAD

For Lonesome Road, a new radio signal will appear, notifying the player to travel to the Canyon Wreckage and enter the Divide, with a new map marker and quest objective, "The Reunion."

GUN RUNNERS' ARSENAL

For Gun Runners' Arsenal, a message will appear, notifying the player that all major and minor weapon dealers in the Mojave Wasteland now carry new weapons, ammunition types and modifications.

COURIER'S STASH

All contents of the Tribal Pack, Mercenary Pack, Caravan Pack and Classic Pack will be loaded to the player character automatically once the player loads a save or a new game after the content pack installed.

SETTING UP

Set up the PlayStation®3 system according to the instructions in its instruction manual. At start-up, the power indicator light will glow red to indicate that the PlayStation®3 system is in Standby Mode. Press the power button and the power indicator light will turn green.

Insert the *Fallout: New Vegas® Ultimate Edition* disc into the disc slot with the label side facing upwards. Select the  icon from the XMB™ Menu and press the  button to continue. Make sure there is enough free space on the Hard Disk Drive (HDD) before commencing play. Do not insert or remove peripherals once the power is turned on. Please refer to the PlayStation®3 system's instruction manual for further details about setting up and recharging a Wireless Controller.

PLEASE NOTE: the information in this manual was correct at the time of going to print, but some minor changes may have been made late in the product's development. All screenshots for this manual have been taken from the English version of this product.

MAIN MENU

Continue

Continue playing from your most recent saved game.

New

Begin a new game of Fallout: New Vegas.

Load

Allows you to select from a list of previously saved games.

Settings

Takes you to the Settings Menu where you can adjust your gameplay, display, audio, and control preferences. See pg. 27 for more info.

Credits

View the Fallout: New Vegas credits.

Downloadable Content

View any Downloadable Content you have obtained for Fallout: New Vegas.

THE GAME SCREEN

Hit Points (HP)

Your overall health. When you run out of HP, your character dies.

Compass

The compass indicates the direction you are heading, as well as enemies, nearby locations, enemies, and quest markers.

Action Points (AP)

The total number of AP available is based on your character's agility. Action Points are only used in V.A.T.S. Mode (see pg. 16)

Weapon Condition (CND)

The shorter the bar, the worse the condition of your weapon.

Ammo

The ammo for your equipped weapon. The first number is how many rounds you have before a reload, and the second number is your remaining ammo.

Enemy Health Bar

Shows the current health of the targeted enemy.

Rad Meter

Will appear whenever radiation damage is taken.

XP Bar

Will appear whenever experience points are earned.

Damage Threshold Shield

Will appear when the damage inflicted by your weapon is lower than the Damage Threshold for the armor of the enemy you're attacking. When this appears you should switch to a more effective weapon (see pg 14).

COMPASS AND ACTIVATION ICONS

Clear triangle

Indicates a location that you have not yet discovered.

Filled triangle

Indicates a location that you have previously discovered

Quest Target

If you have an active quest, any quest targets will be displayed on your compass as a solid arrow. The quest target will flash faster and faster as you get closer to it.

Map Marker

If you have placed your own marker on the map, this will be displayed as a transparent arrow.

Friend/Foe Markers

People and creatures that you perceive are displayed on the compass as vertical bars. Yellow bars indicate friendly people/creatures. Red bars indicate enemies. Your Perception stat affects if you can "detect" them.

Crosshair

Your crosshair will change whenever you are able to interact with an object. Press the **X button** to interact with the highlighted object.

THE PIP-BOY 3000

Rad Meter

Stats, Items, Data Sections

Pip-Boy Controls

○ button - Enter/exit Pip-Boy.

Directional buttons or **Left stick** - Scroll up/down through lists; move left and right through menus in each section.

L1 button and **R1 button** - Cycle left/right through the three main sections.

Right stick - Pan around Maps, scroll right side menus.

Rad Meter - To the top left of your Pip-Boy is a personal radiation meter that tells you how many Rads you've currently taken in radiation damage.

Sections

There are three main sections in your Pip-Boy 3000:

Stats - Information about your character's stats and abilities.

Items - All of the items your character is currently carrying.

Data - Contains your maps, quest info, notes, and access to any radio signals you can pick up.

Each section is broken into different sub-menus.

STATS MENU

The Stats Menu has five menus: Status, S.P.E.C.I.A.L., Skills, Perks, General.

STATUS

The Status Menu has basic info about the health of your character. Moving up/down on the **Left stick** moves you between the three important subsections for Status:

- **CND** - Shows the condition of each part of your character's body indicated by a bar. The shorter the bar, the more damaged that body part is. When the bar is gone, that part is considered crippled and will appear as a dotted line. If you have any Doctor's Bags, pressing the **△ button** will heal all of your limbs. If you have Stimpaks, you can heal a specific limb by pressing the **□ button** and selecting which specific one you'd like to heal. See Aid, page 18.

- **RAD** - Shows your current level of radiation resistance and how many total Rads of damage your character has taken. If you have RadAway in your inventory, press the **× button** to use it to flush RADs out of your system. If you have Rad-X, you can press the **■ button** to increase your character's RAD resistance for a period of time.

- You can be exposed to radiation either directly from the environment, or by ingesting irradiated food and water. A small amount of radiation will not hurt you, but as your accumulated exposure goes up, you will begin to suffer ill effects (including death, eventually).

Radiation Poisoning Effects

- * 200 rads: -1 EN
- * 400 rads: -2 EN, -1 AG
- * 600 rads: -3 EN, -2 AG, -1 ST
- * 800 rads: -3 EN, -2 AG, -2 ST
- * 1000 rads: Death!

- **EFF** - Shows all of the positive and negative effects your character is experiencing. This could be due to radiation damage, certain clothing you have equipped, Aid you may be using, and other effects.

S.P.E.C.I.A.L.

Your seven primary attributes. A (-) to the right of the number indicates that attribute is suffering a negative effect, while a (+) indicates it is enjoying a boost. Check the **CND** section of your Status menu for more information.

SKILLS

Information on your skills.

PERKS

Special abilities you can choose every other level.

GENERAL

Lists your Reputation with the various factions in the Mojave Wasteland. Press the  button to toggle between Reputation and a list of your many accomplishments while playing the game as well as your current Karma status and level. See page 17 for more on Reputation.

ITEMS MENU

The Items Menu has five sections: Weapons, Apparel, Aid, Misc. and Ammo.

Menu Controls

- ⊗ **button** – Equip, Unequip or Use the selected item.
- Ⓛ **button** – Drop the selected item.
- Ⓜ **button** – Repair the selected item (see Repair, pg 15).
- L2 **button** – Mod the selected weapon (see Weapon Mods, pg 14).
- R2 **button** – Hot Key the selected item (see below).

Item Characteristics

Items in your inventory may have a number of characteristics that will appear when the item is highlighted:

- DPM** – How much Damage the weapon does (the higher the number, the better).
DPS – How much Damage the weapon does per second (the higher the number, the better).
DT – The Damage Threshold (the higher the number, the better. See Armor/Apparel, page 15).
WG – How much the item weighs.
VAL – The item's value in Bottlecaps.
CND – The current condition of the weapon.
- EFFECTS** – Any positive or negative effects your character will experience if the item is equipped.

Weapons will also display the caliber Ammo the weapon uses along with the current rounds loaded and remaining rounds.

HOTKEYS

In the Inventory Menu, press and hold the **R2** button and press a direction on the **Directional buttons**. Then highlight the weapon, apparel, or healing item you want in that slot. Note that you can still change sections and menus in your Pip-Boy with the Hotkeys open and the item will be assigned when you release **Directional buttons**.

While playing, use the **Directional buttons** to select any of your seven Hotkeyed items. You can also press and hold the **Directional buttons** to see all your hotkeys.

DATA

The top portion of the Data section will always display your current location and the current date and time. The Data section includes five menus: Local Map, World Map, Quests, Notes, and Radio.

LOCAL MAP

The Local Map displays an overhead map of your current location, as well as any nearby doors.

WORLD MAP

The World Map shows an overhead map of the entire Mojave Wasteland area, and markers for any places that have been discovered during the course of your adventures. You can fast travel directly to any place you have previously visited by highlighting the location and pressing the **X button**. Move Up/Down on the **Left stick** to zoom in/out on the map. Use the **Right stick** to move around the map.

QUESTS

The Quests screen in your Pip-Boy's Data section tracks your progress in every quest you have undertaken. To the left is a list of quests; those with bright text are active; those with darkened text have been completed or failed. Your active quest is marked by a small box.

On the right-hand side of the screen are the objectives for each quest. The active objectives have bright text and are on the top of the list; the completed objectives have darkened text and are at the bottom of the list. Objectives marked as "(Optional)" are not necessary to successfully complete the quest.

NOTES

Contains all quest related and miscellaneous notes you find in the game, both written and audio. Press the **X button** to listen to an Audio note (the audio will continue to play even if you close your Pip-Boy menu). Press the **Y button** to toggle between All Notes and only Active Quest Notes.

RADIO

All the radio signals you have discovered are listed on the Radio screen in the Data tab of your Pip-Boy. Signals listed in bright text are within range, and can be listened to. Signals listed in darkened text have been discovered, but you are no longer within range – in order to listen to one of these stations, you have to move back into the signal's receiving range.

HARDCORE MODE

After creating your character, you will be given the choice to turn on Hardcore Mode. Separate from difficulty levels, this special way of playing the game creates a more strategic and complex experience that is tailored for more experienced Fallout players.

In Hardcore Mode, you will have to eat, sleep and remain hydrated. Any damaged limbs can only be healed using Doctor's Bags or visiting a doctor. Ammunition is given weight in hardcore mode, requiring you to closely monitor your inventory at all times.

While fast traveling via the Pip-Boy does still work in Hardcore Mode, you may not fast travel if your character would die due to dehydration or starvation in the time it would take you to get there.

You may toggle Hardcore Mode at any time via the Options menu, however in order to earn the Hardcore achievement you must play the entire game, from the point you are first prompted until the endgame sequence without ever turning it off.

XP AND LEVELING UP

When you reach the required number of Experience Points, you will level up automatically, so long as you're not in combat.

Every time you level up, your Health increases and you gain Skill Points to assign to your skills. You may choose a new perk for every two levels you increase.

Note: When leveling up, the level for your skills is their natural level and does not include any bonuses you may be receiving due to items or Chems.

COMBAT

The Mojave Wasteland is a dangerous place, and combat is a fact of life for all but the most diplomatic of survivors.

WEAPONS

Weapons fall into several categories: ranged weapons, melee weapons, unarmed weapons, grenades and mines. Your effectiveness with any weapon depends on your character's skills, the condition of the weapon, and the Damage Threshold of your opponents.

When using any weapon, aim with your crosshair and pull the **R1 button** to attack. When using an automatic weapon, holding down the **R1 button** will continuously fire. Your character will automatically reload a weapon when you use up your current rounds, provided you have additional ammo available. To reload at any time, you can tap the **○ button**.

Damage is calculated by subtracting the DAM rating of the weapon you are firing against the Damage Threshold of your target's armor. You will always cause some damage, but if you see a red shield, it means you would be better off using a different weapon. If you see a shredded shield image this means you are doing large amounts of damage to your target.

Your accuracy and damage in combat is determined by your Strength level, as well as the governing skill for the type of weapon you are firing (Guns, Energy Weapons, Explosives, etc.). Weapon condition also affects how much damage is done, as well as the chance the gun jams when reloading. Repairing weapons can increase the amount of damage they do (see "Repairing Weapons and Apparel" below) and reduce the chance of your weapon jamming. Holding the **L1 button** will allow you to aim and fire more accurately, but move slowly.

When you are sneaking (press down on the **L3 button** to toggle) your character will move slowly but has a chance of a sneak attack bonus on any target that has not detected you. For more information on Stealth mode, see pg. 19.

MODDING YOUR WEAPONS

As you make your way through the Mojave Wasteland, you may find weapon mods for sale or in various containers. Each of your weapons can accommodate up to three unique modifications, and these can add new features like enhanced zooming with a scope, additional bullets per clip, or increased damage. Modding a weapon also increases its value to merchants. To activate a mod, select the weapon in the Items list of your Pip-Boy and press the **L2 button**. Then select the mod you want to attach. Once a mod is attached to a weapon it is indicated with a + sign in your weapons list. You cannot remove a mod once it has been attached. Mods are specific to each individual weapon, so you cannot attach the sight for the 9mm Pistol to the .357 Magnum Revolver.

MELEE AND UNARMED ATTACKS

You can attack an enemy with melee or unarmed attacks when they are within range of your character. As you increase your Melee skill, you may notice your weapons have unique moves in V.A.T.S. (see page 16 for more on V.A.T.S.). At higher levels of the Unarmed skill, you will automatically use advanced unarmed attacks while fighting. In addition, there are several unique unarmed moves that can be learned from characters throughout the Mojave Wasteland.

R1 button: Performs a melee attack. Hold to do a power attack that does double damage.

L1 button: Block. Blocking incoming melee attacks provides a large bonus to your Damage Resistance.

ARMOR/APPAREL

Each piece of armor you wear adds to your Damage Threshold. The higher your DT, the less damage you will take from attacks. The amount of protection you receive from a piece of armor depends on the armor itself and whether the armor is in good repair. As your armor's condition is lowered, you lose points off your Damage Threshold. Be sure to repair your armor regularly to avoid ineffective armor! Some pieces of apparel have a low Damage Threshold, but add different bonuses such as increases to Skills or Stats.

REPAIRING WEAPONS AND APPAREL

An item's condition affects how well the item works, as well as its value. Weapons of lower condition will do less damage, and jam more frequently. Armor of lower condition will offer less protection. You can repair items in your Pip-Boy by selecting Repair (**△ button**) on the item. You can only do this if you have similar items to use for parts.

The Vault-Tec Assisted Targeting System, or V.A.T.S., allows you to pause the game, assess any combat situation tactically, and target the specific body parts of any enemies onscreen.

Limb Condition:

Displays the relative health of each part of an enemy. When the bar disappears, the body part is crippled.

AP (Action Points):

This bar will deplete as you queue up attacks. The Flashing part is the amount of AP needed to do an attack.

Enemy Health:

How much health your target has left.

Pressing and holding the **R2** button will pause the game and scan the area of targets. To zoom in on an enemy, simply select it with your **Right stick** and release the **R2** button. You are now able to target the individual body parts of that enemy using the **Left stick**.

When using a melee weapon or unarmed combat, you will need to be close to have a chance to hit. Both melee and grenades are "full body" attacks, and you cannot specify a specific body part.

If your Melee skill is high enough, you will see a unique attack move listed on the screen. Press the **△** button to initiate this move.

Every attack on a body part uses up Action Points. Heavier weapons use more Action Points for every shot.

When you've used up all of your Action Points, and are ready to perform the attacks, press the **ⓧ** button.

The number of attacks you can make is limited by your Action Points.

COMPANIONS

As you venture across the wasteland, you will encounter friendly characters who will offer to join you on your journey. At any time you can have one human (or humanoid creature, such as a mutant or ghoul) and one non-human (robot or animal) companion with you.

Having a companion adds specific bonuses for each character, such as increases to the effectiveness of healing items, or stat increases. These bonuses are only in effect while that character is with you, and go away as soon as you dismiss them from your party.

Companions also have unique storylines to be followed as you play through the game. Get to know them and they'll reveal more about themselves and the wasteland.

CONTROLLING YOUR COMPANIONS

Companions will follow you wherever you go and automatically aid you in combat. However for more control over them, you can use the Companion Wheel to issue commands.

To bring up the Companion Wheel walk up to your party member and press the **ⓧ** button. You can then issue these commands:

- **Be Aggressive/Be Passive:** Toggles attack states for your companion. When set to aggressive, your companion will attack any hostile target within range. When set to passive, your companion will wait for you to attack before going after targets.
- **Use Stimpak:** Allows you to use a Stimpak from your inventory to heal your companion. The companion's current health and maximum health are displayed here, along with the number of Stimpaks currently in your inventory. Note that companions will automatically use any healing items in their inventory when their health gets low.
- **Wait Here/Follow Me:** Asks the companion to wait for you or follow along. You may find situations where it is best to have your companion wait for you at a distance.
- **Talk To:** Opens up a dialog with your companion. Use this to learn more about them. Doing so will open up new quests and new abilities for you and your companions!
- **Back Up:** Tells your companion to step back a bit.
- **Keep Distance/Stay Close:** Sets how far away your companion walks behind you.
- **Open Inventory:** Opens a screen where you can exchange items with your companion. Be sure to upgrade their armor and weapons as you wander the wasteland together, and keep them stocked with ammo and healing items!
- **Use Ranged/Use Melee:** Tells your companion to switch between ranged and melee attacks. Certain companions will be better suited to one or the other fighting style.

AID

When you are hurt, there are several ways to restore your health:

- Visit a doctor and pay for healing.
- Use a Stimpak, Super Stimpak, or Doctor's Bag.
- Eat food or drink water.
- Sleep in a bed.

Each time you take a chem or drink alcohol, your chance of becoming addicted to it goes up. If you stop using the drug for a while, this chance will drop. Each drug has its own addiction chance, so using one type will not increase your chance of becoming addicted to another.

Addiction will hurt some of your S.P.E.C.I.A.L. attributes. These penalties go away temporarily if you take that drug again. A doctor can cure you of any addiction, for a price.

In order to heal a crippled limb, you have three choices: sleep in a bed, find a doctor, or use a healing item to heal yourself.

Stimpaks can be used for general healing (which will also slightly heal crippling damage), or they can be applied directly to a limb to heal crippling damage. Doctor's Bags can heal multiple crippled limbs, however they are much rarer in the world than Stimpaks.

To heal a crippled limb directly using a Stimpak, navigate to the Stats screen in your Pip-Boy, then select the limb and use the Stimpak directly on that limb.

STEALTH

Your stealth state is displayed when you crouch (click the **L3** button). [HIDDEN] means nobody detects you. [CAUTION] means someone is searching for you. [DANGER] means you have been detected by an enemy.

How stealthy you are is affected by many factors:

- **Sneak skill:** Your Sneak skill only helps you when you are crouching. The higher your Sneak skill, the easier it is to remain undetected, steal an item, or pick someone's pocket.
- **Enemy's perception:** Some enemies are less perceptive than others, and therefore less likely to detect you.
- **Line of sight:** An enemy is much less likely to detect you if he can't see you.
- **Light level:** You are harder to see in darker areas.
- **Movement:** You are hardest to detect when motionless, easiest to detect when running.
- **Apparel weight:** Heavier apparel makes more noise when moving.
- **Sound:** Most melee weapons make very little noise; bigger guns make a lot of noise.

Successfully attacking while undetected gives you an automatic "sneak" critical.

REPUTATION

Your actions in the Mojave Wasteland contribute to your Reputation with each of the major towns and factions in the game. At any time you can check your reputation with every faction and town by going to your Pip-Boy and selecting the General tab (for more on the Pip-Boy 3000, see page 8).

Reputation numbers increase and decrease as you help or harm each individual faction or major location, and you are given a title for your current status. Having a positive reputation with a faction will enable different dialog options and people will be more likely to help you. If your reputation is overly negative, members of that faction may attack you on sight.

In addition to your reputation, simply wearing the uniforms of an opposing faction may affect how characters react to you. Members of one faction may decide to shoot you if you're wearing the clothing of their hated enemy. Be careful!

CRIME AND PUNISHMENT

Crimes are divided into two categories: major and minor.

Minor crimes cause only the victim to become hostile to you:

- **Theft:** If the owner sees you steal something that she owns, she will try to take it back from you. If you try to escape, or persist in stealing from her, she will attack you (or run for help). If you fight back, you are now committing a major crime (Assault, see below).
- **Trespass:** If the owner sees you open a locked door, container, or computer, he will immediately attack you.

Major crimes cause the victim and the victim's friends to become hostile to you:

- **Assault:** Attacking someone without provocation, or fighting back when someone attacks you for a minor crime.
- **Murder:** If there are witnesses who care about the victim, they will become hostile to you.

If a fight starts that you did not intend, you can attempt to yield by holstering your weapon. This may or may not be successful depending on how the attacker feels about you.

DIALOGUE

When in dialogue with a character, simply select the response that seems most appropriate to the situation... and be prepared for the character you're talking with to react accordingly.

You may occasionally be presented with dialog options that are preceded by the name of a skill (e.g., [Sneak]) or a specific faction that you may have reputation with (e.g., [NCR]). This means the line in question is available because you possess the necessary perk or your skill/reputation is high enough, and would not be available otherwise. If you see a line with a skill name and a set of numbers after it that highlights in red when selected (e.g., [Barter 25/50]) it means your current skill level is too low to be successful with this line of dialog. The first number represents your skill level, the second represents the level needed to be successful. You may reach that level by taking Chems, reading skill magazines or other temporary means. Note that there are never any long-lasting effects to failing skill dialog options, so you can always try again later.

CONTAINERS

Containers include things like dead bodies, desks, boxes, lockers, and more. To see what's inside a container,

direct your Crosshair over the object and press the **X button**. If the rollover text is red, someone else owns the container, and taking anything from the container is stealing, and a crime if you are detected.

Your inventory is displayed on the left, the container's is on the right. You can switch between the two lists using the **L2** and **R2** buttons. Use the **Left stick** or the **Directional buttons** to filter the lists (All, Weapons, Apparel, Aid, Misc, Ammo).

You can take things from the container, or move them from your inventory into the container, by selecting an item in either list and pressing the **X button**. Scroll up and down in lists with the **Left stick** or the **Directional buttons**.

Press the **Enter button** to take everything from a container. The **Esc button** closes the container.

Warning! Don't leave things in containers you don't own! They may not be there when you come back for them!

BARTERING

The Barter screen allows you to trade, buy or sell items. The prices you get for buying or selling depend on your Barter skill.

To Barter, simply select an item and hit the **X button** to move it from your inventory into the other person's (if you want to sell or trade one of your own items) or from the other person's inventory into your own (if you want to buy or trade for one of their items).

As items are moved back and forth, caps will also be automatically moved between both parties. This is represented by the large "caps" arrow in the middle.

If the arrow is darkened, it means one of you doesn't have enough caps to complete the transaction. You cannot accept the barter if you don't have enough caps. But you can accept it if the other person doesn't have enough, but at this point, you are giving items away for free.

GAMBLING

On the New Vegas strip and elsewhere, you will find casinos and bars that are more than happy to take your hard-earned caps away from you. Outcomes are affected by your Luck stat.

Note that Casinos may require you to exchange your caps for in-house chips before letting you gamble in their establishment.

BLACKJACK

The goal of Blackjack is to have the sum total of your cards higher than the dealer's up to 21. Going over 21 is a "bust" and results in that player losing the hand. Numbered cards are equal to their face value, with face cards (jack, king, queen) valued at 10, and aces at either 1 or 11.

Payout rules vary from casino to casino throughout the wasteland.

Controls

To play, activate the Blackjack table. Choose your bet by using the **R1** and **L1** buttons to raise or lower the amount, or pressing the **Enter button** to choose the maximum bet for that table. Place your bet by hitting the **A button**.

Once your bet is placed, you will receive your cards. At this point you can make one of several moves:

- **Hit:** Press the **X button** to receive another card.
- **Stay:** Press the **Enter button** to end your hand.
- **Surrender:** Press the **Enter button** to cede the round to the dealer and receive half of your bet back (note that not all casinos in the Mojave Wasteland support this option).
- **Split:** If you receive two identical cards, you can press the **R1 button** to split your hands and double your bet. You will then receive two new cards, one for each hand. The green arrow indicates the currently selected hand. Press the **L1 button** to switch between your hands.
- **Double Down:** After being dealt two cards, you can double your bet and receive one (and only one) additional card.

SLOT MACHINES

Slot Machines are as basic as gambling gets. Put down your money and spin the wheel.

ROULETTE

Controls

To activate a Slot Machine, just walk up to it and press the **X** button.

Once you've chosen a machine, set your bet by increasing or decreasing the amount with **R1** and **L1** buttons (or choose the maximum by hitting the **□** button) and press the **X** button to give it a spin.

You can also check the payout list of the current machine by pressing the **△** button.

In Roulette, gamblers put their money down however they like before a ball is placed on the wheel and spins until it stops, landing on one of the numbers. Payouts are given according to where the ball lands.

CARAVAN

Controls

To activate a Roulette table, walk up to it and press the **X** button.

The next step is to place your bet (or bets, as it were). Move your cursor around the layout using the left stick. As you pass over each area, you will see the details of the bet and the payout in the upper left corner of the screen. You can choose to bet on an exact number, a group of two or four numbers, a bank of 12 or 18 numbers, all even or odd numbers, or the colors red or black.

To place a bet, choose the amount using the **R1** and **L1** buttons, and place your chips down by pressing the **X** button. You may place up to 10 bets per round.

When you have placed all of your bets, press the **□** button to spin the wheel and try your luck.

Out in the wasteland, the game of choice is Caravan. Created by caravan guards using whatever cards they could find lying around, this is a one-on-one card game played with a cobbled together deck of loose playing cards.

Building a Deck

Caravan decks are comprised of at least 30 cards from one or more traditional playing card sets. The deck may have any number of cards of any type, although it cannot have duplicate cards from the same source deck. A balanced deck has a mixture of numerical and face cards, with the specific balance tailored to the player's personal style.

Rules

Caravan is played with players building three opposing piles (or "caravans") of numbered cards. The goal is to outbid your opponent's caravan with the highest value of numbered cards without being too light (under 21) or overburdened (over 26).

The game begins with each player taking eight cards from their deck and placing one numerical card (or ace, valued at 1) on each caravan. Players may not discard during this initial round.

Once both players have started their three caravans, each player may do one of the following on their turn:

- Play one card and draw a new card from his or her deck to their hand.
- Discard one card from their hand and draw a new card from his or her deck.
- Disband one of their three caravans by removing all cards (numeric and face) from that pile.

Caravans have a direction (either ascending or descending numerically) and a suit.

The suit is determined with the first card placed on a caravan, the direction by the second. All subsequent cards must continue the numerical direction or match the suit of the previous card. Cards of the same numerical value cannot be played in sequence, regardless of suit.

Face cards can be attached to numeric cards in a caravan, either on one of player's own or one of their opponent's and affect them in various ways.

Card values:

- **Joker** - Played against A, 2-10. Effects change based on whether it is an ace or numbered card (see below). Multiple jokers may be played on the same card.
- **Ace** - Value of 1. Jokers played on aces remove all other non-face cards of the ace's suit from the table. E.g. a joker played on an ace of spades removes all spades (except face cards and that card, specifically) from the table.
- **2-10** - Listed value. Jokers played on these cards remove all other cards of this value from the table. E.g. a joker played on a 4 of hearts removes all 4s (other than that card, specifically) from the table.
- **Jack** - Played against A, 2-10. Removes that card, along with any face cards attached to it.
- **Queen** - Played against A, 2-10. Reverses the current direction of the hand, changes the current suit of the hand. Multiple queens may be played on the same card.
- **King** - Played against A, 2-10. Adds the value of that card again. E.g. a king played on a 9 adds 9 to that hand. Multiple kings may be played on the same card for multiplicative effects. E.g. 4 + king = 8. 4 + two kings = 16.

Winning

A player's caravan is considered sold when the value of its cards is over 20 and under 27, however the other player may still outbid by increasing the value of their opposing pile (while still staying within the 21 – 26 range). When each of the three competing caravans has sold, the game is over. In the event that one of the three caravan values are tied between players, the game continues until all three caravans have sold. The player with two or more sales wins the pot.

Controls

Certain NPCs in the Mojave Wasteland will offer to play you in a game of Caravan. In dialog, challenge them in a game to start playing.

Betting

The first phase is betting. Here you can see the amount your opponent has put down listed in the lower left hand corner, along with your current bet and your total funds. Press the **X** button to meet your opponent's wager, or the **□** button to raise them. When you've completed your bet, press the **○** button to exit and move to the next phase.

Building a Deck

Before playing a game of Caravan, you can first create or modify your deck. The top row of cards represents the contents of your deck. On the second row are all the cards you own. Navigate through the cards with the left stick, and add to your deck by pressing the **X** button. You can remove cards from your deck using the **□** button. You can also randomize a deck by pressing **R2** button. When you have built a deck, press the **△** button to move on to the next phase.

Playing the Game

When it's your turn, select a card from your hand using the Left Stick. Press the **X** button to choose a card. Choose the position for the card (either as a part or modifier to your own Caravan, or as a modifier to one of your opponent's cards) and press the **X** button to place the card. The numbers in the middle of the screen show the current value of each player's Caravans.

OPTIONS AND PREFERENCES

You can access the Options Menu from the Main Menu when you load Fallout: New Vegas or at any point during the game, by pressing the **START** button. The Options Menu allows you to adjust your gameplay, audio, video, and control settings, and gives you access to the Download option.

GAMEPLAY

Using this menu, you can adjust several game settings:

- **Kill Cam Mode:** This changes the slow-motion effect when killing the last of a group of enemies. By default this is set to "Cinematic" which is a third person, sweeping camera movement. Other options are "Player View" which slows down time without changing perspective, or "None" which turns the feature off entirely.
- **Hardcore Mode:** Hardcore Mode is a much more difficult way of playing Fallout: New Vegas. For more information on Hardcore Mode, see page 13.
- **Difficulty:** Separate from Hardcore Mode is the difficulty level of the gameplay. These range from Very Easy to Very Hard. This setting affects the amount of damage your attacks do to enemies and how much damage you take when hit. It also modifies how much experience you earn when killing enemies.
- **Save on Rest/Wait/Travel:** These options set whether or not the game saves automatically when each of these actions are performed. By default they are set to "On".
- **True Iron Sights:** This toggles the level with which the camera zooms in when looking down your weapon's sight in combat. Turning it off will have the camera zoom in but leave the crosshair on-screen for targeting.

DISPLAY

Adjust the Brightness slider with this menu. If you have certain TVs (e.g. DLP or LCD projection) or play in a bright room we recommend increasing the brightness. You can also adjust the Pip-Boy colors, HUD Opacity, and Subtitles.

AUDIO

Use this menu to adjust volume levels. Note the Radio has its own volume setting for your Pip-Boy.

CONTROLS

In this menu you can adjust Vertical and Horizontal Sensitivity, and Invert the Y Axis. You can also reassign the Action Mapping for the game's controls.

LIMITED WARRANTY

ZeniMax Europe Limited guarantees to the original purchaser of this computer software product that the disk/cartridge supplied with this product shall not show any fault during the first 90 days from the date of receipt of ownership. In the first instance please return the faulty product to the point of purchase, along with any proof of purchase. If for any reason this is not possible then please return the product to ZeniMax Europe Limited at the address below along with any proof of purchase, location of purchase, a statement describing the fault and any original packaging you may have. This warranty is in addition to and does not affect your existing statutory rights regarding the product and your statutory rights are in no way restricted or affected by this warranty. You may have additional rights under applicable local law. These provisions do not exclude such rights to the extent prohibited by local law. For more information contact your local consumer advice centre.
