

Family Forest Carbon Program

What is the Family Forest Carbon Program?

The Family Forest Carbon Program (FFCP) supports America's family forest owners in improving forest health and addressing climate change through sustainable management. The program provides:

- Expert consultations by forest professionals
- Management plans that are customized for your unique goals for your land
- Funding to help you reach your goals
- An opportunity to make a positive impact on your land, wildlife and the climate
- An investment in the legacy of your land

What makes FFCP unique?

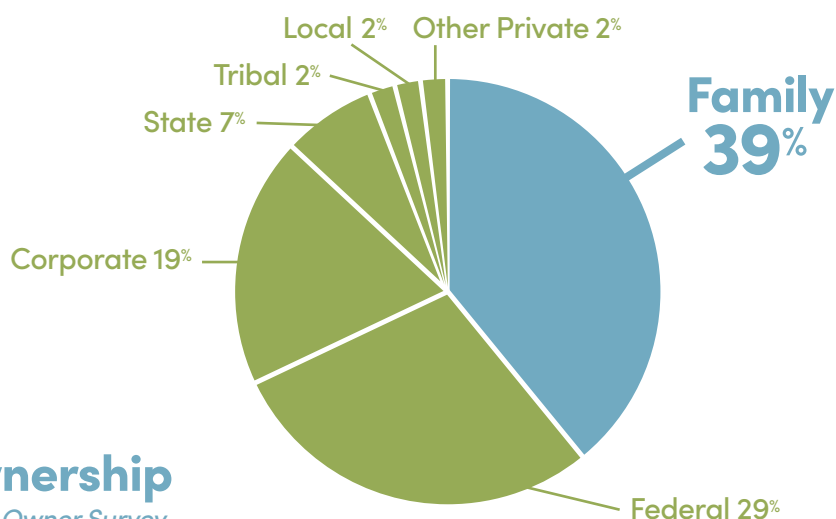

FFCP pays family landowners to implement practices on their land that promote carbon storage and sequestration. The minimum acreage needed to enroll is low: only 30 acres compared to 3,000+ acres that many other programs require. On top of that, FFCP provides technical assistance and forest management education to help landowners create healthy forests aligned with their personal goals.

Who is behind FFCP?

The Family Forest Carbon Program is a partnership and run by the American Forest Foundation and The Nature Conservancy, two national conservation nonprofits.

Family Forest Carbon Program

Available Practice

Grow Older Forests

Grow an older forest by increasing the time between harvests over the next 20 years.

Enhance Your Woodland

Grow a more robust forest through sustainable management and harvesting over the next 20 years.

When do I get paid?

Landowners are paid a large portion of their total payment up front with the remaining payments divided over the remainder of the contract period. Exact payment schedules vary by practice.

How do carbon programs work?

Forest carbon programs allow landowners to access a market that sells the carbon sequestered and stored in their trees to companies that are working to protect the environment and reduce their carbon footprints. Landowners agree to manage their forests in ways that increase carbon storage.

How much do I get paid?

Payments vary based on a range of factors about your land and trees. These factors tell us about the condition of your forest and how much carbon your forest could sequester and store. The current payment range is \$200–\$300 per acre.

Visit www.familyforestcarbon.org to learn more and check your eligibility, or phone us at (844) 790-0045.

“It’s expensive to keep our land healthy and maintain the wildlife habitat. We have year-round maintenance and property taxes to pay. We enrolled in the Family Forest Carbon Program because it will provide us a revenue stream to make this work happen.”

Susan, *enrolled landowner*
