**TOWNE NORTH**  
Animal Hospital

## AUTHORIZATION FOR SURGERY/DENTAL AND ANESTHESIA

I, \_\_\_\_\_ authorize Towne North Animal Hospital to administer anesthesia and perform surgery on my pet \_\_\_\_\_. I understand there is some risk with any procedure requiring anesthesia but that all precautions will be taken to reduce that risk including a preoperative examination, vital signs monitoring and diligent care during the recovery period.

Not all health/dental problems are detected on a physical examination. Underlying abnormalities such as prolonged bleeding, anemia, and kidney and liver dysfunction can affect the outcome of surgery and can be detected with some simple blood tests. Therefore the doctors at Towne North Animal Hospital do require your pet be tested before having anesthesia or surgery.

\_\_\_\_\_ **Initial** I understand <animal> will receive the CBC and blood chemistries prior to surgery. \$76.50 is the cost for this testing. \*\*\*

\*\*\* *Young, healthy feline neuters are HIGHLY recommended to receive this bloodwork, but may be exempt from requirement.*

---

### DENTAL PROCEDURES ONLY

\_\_\_\_\_ **Yes** \_\_\_\_\_ **No** I authorize the performance of Dental X-rays of \_\_\_\_\_'s mouth as recommended by DVM

\_\_\_\_\_ **Yes** \_\_\_\_\_ **No** I authorize extractions and other dental procedures as recommended by DVM

\_\_\_\_\_ **Yes** \_\_\_\_\_ **No** Other: \_\_\_\_\_

---

### POST-OPERATIVE PAIN RELIEF

The use of pain management before, during and after a surgical procedure has been shown to decrease the amount of anesthesia needed, increase their comfort level and decrease the length of recovery time. All patients undergoing surgical or dental procedures will receive pain control while in the hospital with us and most will go home with oral pain medication.

We are also happy to offer Therapy Laser Treatments as well, if you are interested. Therapeutic laser treatments provides non-invasive, non-pharmacological additional pain relief by stimulating local anti-inflammatory properties, reducing swelling, increasing blood flow which promotes rapid healing and further reducing scar tissue formation.

1. MLS Therapy Laser Treatment (as recommended by DVM) **Yes** \_\_\_\_\_ **No** \_\_\_\_\_

---

### ADDITIONAL PROCEDURES

While \_\_\_\_\_ is undergoing an anesthetic procedure we can implant a permanent microchip ID with no discomfort (\$45.50 - discounted if on PAW Plan).

Do you want the microchip implant? **Yes** \_\_\_\_\_ **No** \_\_\_\_\_
