

# IS YOUR DOG ITCHY?

Do they...scratch, chew, rub, or lick themselves constantly?

Do they...roll, scoot, or even shake their head often?

We are participating in a large clinical trial comparing the effectiveness of a potential treatment for dogs with signs of atopic skin allergies against a standard treatment.

Talk to us to see whether your dog may be a candidate to participate.  
If eligible, all examinations and medications needed in the study are free of charge!
