Treatment Plan and Estimated Costs

You have received a Treatment Plan Estimate with the potential costs for the treatment and care of your pet. This aforementioned document is only to derive an estimated idea of the potential costs for your pet's treatment plan. It is not intended to necessarily be the only treatments to be done for our patient, your pet. Always remember that the doctor and staff are attempting to give you information concerning diagnostics and treatments including the present and the future. We, as doctors, generally know what some diagnostics and treatments are in the beginning, but other items listed on the estimated treatment plan could change based on diagnostic results, changes in symptoms, and clinical response. Therefore, some of the items listed on the estimate may not appear on the final invoice. Your invoice will only have what has specifically been completed for our patient. We will always diligently try to stay within the estimated parameters or parameters allowed.

If your pet has been hospitalized and you have any concerns with the status of your charges, you are welcome to check at any time for an update of your charges for treatment and care.

Our most important focus here is always to aspire to provide and deliver paramount health care and treatment our patients deserve to correct adverse health conditions and prevent adverse health conditions. With that said, you as the patient's owner will indirectly receive the same.
