

Parasite

Prevention Promotion 2023

Warm weather means it's peak parasite season in Idaho! Now is a great time to make sure that your pet is protected against ticks, fleas, and heartworm disease. Parasite prevention is key for the health and safety of both your pet and your family. We recommend protecting against ticks and fleas by administering **Bravecto**, available in a flavor tablet or in topical form, once every 3 months. For the prevention of heartworm disease and intestinal parasites, we recommend **Sentinel Spectrum**, a soft chew administered once each month. We currently have high dollar instant rebates available on both products!

With Ehrlichia, Anaplasmosis, and Heartworm on the rise in our area, we are currently offering special pricing for our combination Heartworm and 4Dx test (tick borne screen) through August 15, 2023. Savings can be up to a \$90 value with annual blood work or \$32 for heartworm and 4Dx test only. For general questions and pricing, ask your doctor or technician.
