

PAW PLAN OVERVIEW

Dogs age at a much faster rate than people. For every year that you age, your dog will age from 6 to 8 years.

Your dog's medical and nutritional needs will also change as their bodies age. A Paw Plan helps manage their evolving needs by monitoring vital organ function and detecting problems early, before they become life threatening.

Every Adult Paw Plan offered by Spanish Trail Animal Hospital includes all necessary examinations, vaccines, laboratory tests and other services essential to protect your pet against illness and disease. An upgraded plan is designed to provide additional services like radiography (x-rays), early detection diagnostics, and more extensive blood work. Our goal is to keep your pet healthy and happy during the prime years of their life.

Canine Adult Paw Plans are designed for dogs older than 1 year of age.
