

Inventory and order management

Integrated into Ubik and accessible by web, this module provides an efficient system for perpetual inventory management of your laboratory's products (including narcotics and controlled substances).

Facilitates your work and increases your efficiency.

Helps reduce errors with electronic order suggestions based on your minimum/maximum values.

Boosts efficiency with electronic receiving management to validate the accuracy of goods received and speed up the receiving process.

Helps to reduce losses, out of stock, costly breakdowns and overstock

levels through better management of minimum and maximum values.

Helps you follow the recommendations of the Ordre des pharmaciens du Québec and Health Canada with respect to traceability of receipts, discharges, sales and recordable losses.

Makes your life easier with warnings and notifications that allow you to create orders based on the pharmacy's standards.

Helps you make informed decisions with a comprehensive, up-to-date view of the inventory.

Reduce manual inventory processes and help improve operational efficiency while following Health Canada's recommendations on traceability of inventory movements.

- **Electronic management of orders, receipts and invoices**
 - **Suggested orders** for Kohl & Frisch, Pharma Plus +, McKesson and direct manufacturers
 - Periodic inventory-taking and adjustment as needed
 - Management of your inventory and orders **by generic product group** (molecule/strength/form) to better control inventory shortages
 - **Electronic integration** of your purchases into your inventory
- **Setting customized inventory thresholds** based on electronic calculation by the system using actual sales
 - **Generating reports** for a comprehensive, up-to-date view of your stock levels including inventory, stock movement, and product velocity reports
 - **Transferring an out-of-stock product** to another wholesaler when the wholesaler provides information on the product concerned
 - **Mobile application** for taking inventory, creating orders to be sent, and processing orders received
