

# TELUS EMR Mobile

Stay connected to your practice and your patients in the office and on the go.

We get it. Time is precious. You need an EMR that gives you the flexibility to access the information you need – when and where you need it. **TELUS EMR Mobile** is a complimentary app for TELUS EMR users that lets you remotely connect to your EMR on the go from a mobile device or Internet browser.

## Convenient

- Review lab results while you're at the hospital, on a house call, in a patient consult or at home
- Clinically document conditions by taking a photo, adding a comment and uploading it directly to the patient's chart in your EMR
- Check your schedule to plan your day and assign tasks to nurses or staff based on lab results received

## Efficient

- Access your messages in the clinic or on the go
- View basic patient information, including health conditions, medications and past consultations
- When reviewing lab reports, clearly see abnormal test results and mark them as reviewed

## User-friendly

- View information easily in a mobile form factor; patient health information, incoming lab results and your calendar are available at-a-glance
- Messages and tasks viewed in the mobile app appear in the same format as they do on your desktop EMR
- Conveniently use your existing mobile device (Apple or Android)

View and process labs on TELUS EMR Mobile.

Unlock the full potential of your practice workflow on the go from your smartphone or tablet.

**Upload photos** directly to patient charts.

**Quickly access** patient history, medical profiles and demographics.

**Address messages** and tasks that concern you.

**View and process** lab results wherever you are.

Download the app. Pair your device. Get mobile.
