## EXPERIENCE

### Full-Stack Software Developer @ Kinsta

July 2021 - November 2023

- Developed functional code using React, Node.js, GraphQL, PostgreSQL, and Docker. As well as managing and deploying to Google Cloud Platform. Worked alongside QA team members and designers to complete features efficiently.
- Collaborated with my team to develop new features related to the application and database hosting service in addition to the WordPress hosting service. Managed feature epics which consisted of assigning tasks to my teammates to finish the epic on schedule.

### Contract Front-End Software Developer

2017 - 2021

- Worked with local businesses to build and design their websites. This included everything from the landing page and other necessary information pages to contact & quote forms. During this time I worked with many different tech stacks. A majority included: HTML, CSS, JS - React, Node.js - Python.

### Graphic Designer @ Gavina Graphics

January 2019 - July 2020

- Responsible for designing original art and branding elements for individual clients and client teams. Collaborated as a team to solve technical print production problems in an industry that is focused on quality and quantity. Built design formulas that increased productivity and consistency for design work output.

## PROJECTS

### WeatherOrNot

React Native // 2024

- A "just for fun" creative weather app project that, based on the user's preferences, will show an illustrated character dressed in their preferred outfit of choice for that day's forecast. WeatherOrNot uses "weather api" to retrieve the user's local weather data to update the character's outfit. This app will mostly function as a way for the user to set up a home screen widget to view the character. Supports both iOS and Android.

### Travis White Portfolio

[traviewhite.com](https://traviewhite.com) // Next.js, Tailwindcss, Contentful // 2021

- Personal site with the intended purpose of hosting all projects and general creative work.

### Vue-Dex

[poke-vue-dex.netlify.app](https://poke-vue-dex.netlify.app) // Vue.js(Vite), PokéAPI, Sass // 2021

- Useful Pokédex app for searching for information about Pokémon. Built using Vue.js(Vite), utilizing the PokéAPI for the data.

## EDUCATION

### Eastern Illinois University

Graphic Design (BFA) & Studio Art Minor // 2013 - 2018

- Developed strong skills in art and design that directly translated to success in my work with clients and employers post-graduation.
- Lead a group of fellow art students to create an annually published magazine called Blueroom Magazine that is designed, published, and sold by students.
- Notably directed my focus to learn JavaScript by working with professors on independent studies to build sites that showcased art and design history.

## SKILLS

### Programming Technologies

JavaScript (TypeScript), Python, HTML, CSS, PostgreSQL, TDD, BDD

### Libraries & Frameworks

Node.js, React, React Native, Next.js, Vue.js

### Tools & Platforms

Git, Docker, Vercel, WordPress, GCP

### Design Tools

Adobe CC (Illustrator, Photoshop, Indesign, etc), Figma
