

UtaHost Pricing 2026: Full Breakdown of Every Plan and Discount

UtaHost pricing spans everything from a \$2.50 shared hosting starter plan to enterprise dedicated servers running well past \$1,000 a month.

That range makes it easy for a first-time blogger and a growing agency to both find a fit under the same roof.

This article walks through every UtaHost plan type, what you actually get at each price point, and where the real savings hide, including a [30% off UtaHost coupon code](#) you can apply before checkout.

How UtaHost Prices Its Plans

UtaHost, founded in 2018 and incorporated in the United States, runs its infrastructure across more than 30 global data centers in 15-plus countries.

Every plan, no matter the tier, ships with NVMe SSD storage, a free SSL certificate, automated daily backups, and unlimited bandwidth.

The company also holds renewal pricing close to the original signup rate, which sets it apart from hosts that raise bills sharply after the first billing cycle.

Most plans price out cheaper the longer your billing term runs.

A three-year commitment typically unlocks the deepest discount, sometimes as much as 50% off the standard rate, before any additional coupon gets applied.

Shared Hosting Pricing

Shared hosting is the entry point for most new UtaHost customers, and pricing ranges from roughly \$2.50 to \$29.50 a month depending on the term length and tier.

Plan	Starting Price	Websites	Storage	Monthly Visits
Starter	\$2.50–\$3.29/mo	1	30 GB NVMe SSD	~10,000
Basic	Mid-tier pricing	Multiple	Higher storage tier	~25,000
Business	Higher tier	Multiple	100 GB NVMe SSD	~100,000
Pro/Enterprise	Custom pricing	Unlimited-style	Expanded storage	Higher caps

Every shared tier includes a free domain, free SSL, and a 30-day money-back guarantee, so testing the service costs you nothing beyond the first invoice.

WordPress Hosting Pricing

UltraHost's managed WordPress plans start around \$4.80 a month for a single site handling roughly 1,000 monthly visits.

Step up to the WordPress Starter plan and you get support for up to 100 websites, 100 GB of NVMe storage, and room for about 25,000 monthly visits.

The Business WordPress tier keeps that same site and storage allowance but raises the visitor cap to around 100,000 a month, which suits a growing blog network or a small agency managing several client sites.

Students building portfolio sites or class projects can stretch their budget further with the [30% off UltraHost student discount](#), which applies to shared and WordPress plans and makes it one of the more affordable options for anyone still in school.

VPS Hosting Pricing

VPS plans give you dedicated resources without the full cost of a physical server, and UltraHost prices these aggressively for a managed offering.

Entry VPS plans start around \$5.99 to \$8.40 a month, with the VPS Basic tier including one CPU core, 1 GB of RAM, and 30 GB of NVMe SSD storage.

Pricing scales up from there based on CPU cores, RAM, and storage, with more than 20 tracked plans stretching up to roughly \$1,440 a month for the heaviest configurations.

Every VPS plan includes Monarx malware protection, BitNinja security, dedicated firewalls, and a fully managed setup where UltraHost's team handles installation, configuration, and monitoring at no extra charge.

If you want to stress-test performance before committing your budget, check the [latest UtaHost VPS free trial deals](#) to see how the AMD EPYC-based infrastructure handles your actual workload first.

Dedicated Server Pricing

For high-traffic sites and resource-heavy applications, UtaHost's dedicated server lineup starts at the Uta-X1 plan around \$93.50 to \$129.90 a month, which includes four CPU cores, 480 GB of SSD storage, and 16 GB of RAM.

The lineup spans eight tiers total, scaling hardware specs up to enterprise-grade configurations built for agencies and large e-commerce operations that need full, dedicated control over their server environment.

Add-Ons Worth Knowing About UtaHost

Beyond the core plans, UtaHost offers a handful of add-ons that can shape your final bill:

- **Extra storage and additional IP addresses**, useful for growing VPS or dedicated setups, though these can add up if you stack several
- **CDN add-on** paired with advanced caching through Varnish, Redis, and Memcached for faster global delivery
- **Custom ISO support** on VPS plans, letting you install Windows Server or nearly any Linux distribution
- **Domain registration and paid control panel licenses**, which fall outside the standard money-back guarantee

Add on UtaHost's managed VPS support, and you get a technical team handling updates and monitoring without a separate management fee, which is a feature some competitors charge extra for.

Where the Real Savings Are

List prices only tell part of the story. UtaHost regularly runs promotional pricing that stacks with the term-length discount already built into checkout.

A flat 10% coupon can apply across shared, VPS, and dedicated plans, while dedicated servers sometimes get a flat dollar amount knocked off during promotional periods.

The biggest markdowns tend to show up around major shopping events. Watch the [UtaHost black friday deals](#) page if your renewal or signup date lines up with late November, since combined discounts during that window have pushed total savings past 80% off standard pricing in past cycles.

Is UltraHost Pricing Worth It?

For shared and WordPress hosting, UltraHost sits right in line with budget competitors like Hostinger, but its fixed renewal pricing gives it an edge over the long run.

VPS pricing stands out even more, since fully managed support, strong built-in security, and NVMe performance rarely come bundled together at this price point elsewhere.

Dedicated hosting costs more, as expected, but the hardware specs justify the jump for sites that have genuinely outgrown shared or VPS resources.

The one caveat worth flagging: aggressive low pricing in hosting sometimes signals denser server packing, so heavier shared hosting users may notice more resource contention than on premium-tier hosts.

For most small businesses, bloggers, and growing projects, though, the combination of price, features, and support makes UltraHost pricing one of the stronger values on the market this year.
