

Considerations for commercial ASHP selection, specification and system application

What will be covered?

This CIBSE approved CPD seminar builds on our *Introduction to commercial heat pumps – technology and principles* course to guide you through selection and specification of the right heat pump and/or heating system for your customers requirements and expectations.

Topics covered include:

- ① The driving forces behind heat pumps
- ① Government advice
- ① Funding
- ① Best practices
- ① Points to consider when selecting a heat pump
- ① Aims of installing a heat pump
- ① Client expectations
- ① System application criteria
- ① The importance of load calculations and load matching
- ① The importance of Delta Ts and return temperatures
- ① Heat pumps and other systems

Who should attend?

If you're involved in heating system design and installation in commercial buildings, then this CPD is for you. Consultants, contractors and those responsible for heating & DHW specification would all benefit from attending. We recommend you complete our CIBSE approved, *Introduction to commercial heat pumps – technology and principles* before completing this CPD.

Hamworthy CPD seminar

We can offer our CIBSE approved CPD seminars online, or in person – at our site or yours. Our flexible approach means that we are able to tailor our training to suit your business.

Each CPD seminar typically lasts 45 minutes to 1 hours. A lot of our customers choose to run these at lunchtime so that there is minimal disruption to the working day.
