

# Cloudflare for State & Local government

Enabling trustworthy, resilient digital services

## Protect. Connect. Accelerate.

At Cloudflare, three carefully-chosen words explain how we can help you build and earn trust with the people you serve.

### Protect: Trust starts with security and privacy

Legacy security perimeters and technologies are no match for today's relentless cyber attacks. But outdated tech lingers in government despite critical vulnerabilities, high maintenance costs, and lack of vendor support. Modernizing cyber security has long been a top priority, but resource constraints and organizational challenges often get in the way.

Partner with Cloudflare, and you'll gain [advanced cyber security](#) and [Zero Trust capabilities](#) to protect sensitive information and privacy, while maturing your security architecture. We block threats from reaching your applications, improving your security's team efficiency. And we continuously innovate and upgrade our solutions to keep them modern – forever breaking your cycle of technology debt.

### Connect: Trust builds with service reliability and performance

As you build world-class digital services, there's a lot to consider beyond security and privacy. Under [federal guidelines](#), the checklist includes modern design, authoritative content, mobile device optimization, user experience, accessibility, and so much more. While each of these affect public trust, there are two other major factors: uptime and response time.

With Cloudflare, you can focus on building human-centered applications while improving internal processes to deliver services more effectively. We'll take care of network and application security, availability, and performance. Your Cloudflare connection [defends your services](#) against DDoS attacks, malicious bots, and other Internet threats that impact reliability, while [improving web response times](#) by caching and accelerating your content through our infinitely scalable global network.

### Accelerate: Trust is earned when you deliver, fast.

The public likes your vision for better government services, but they want to see results. They want speed and simplicity; consistency and predictability. And because they experience great digital services everywhere else in their daily lives, they want it from the government too. They want it now.

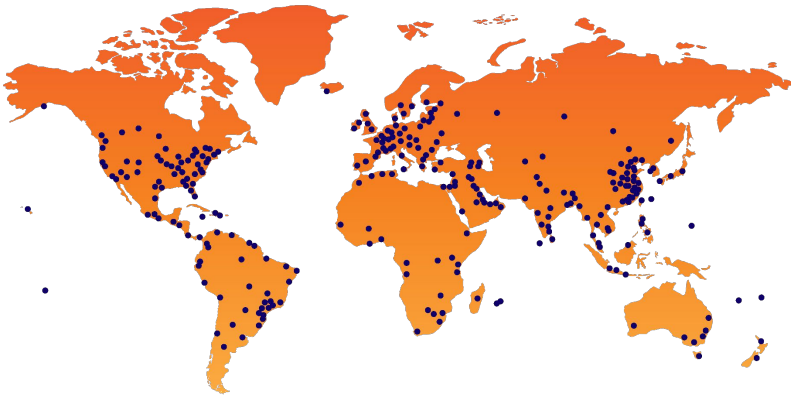

By partnering with Cloudflare, you can make quick progress on your [digital modernization](#) goals. We fit into your existing architecture, without rip-and-replace. We make our services easy to deploy and operate. You can start small, yet have the power of our entire platform at your fingertips. Like so many other [Cloudflare customers](#), let us help you earn trust by delivering on that vision, fast.

"While there has been much emphasis on digital government services in the past four years, more work lies ahead. The vision is that any service [our residents] can complete in a state building can be done online. Challenges may persist, but state CIOs are heavily focused on that vision."

# The Cloudflare advantage over any other approach

## Cloudflare Global Network

As one of the most interconnected networks, Cloudflare delivers local capabilities with global scale

**32**

FedRAMP data centers across 11 metro areas

**330**

cities in 120+ countries, including mainland China

**12,500+**

networks directly connect to Cloudflare, including every major ISP, cloud provider, and enterprise

**296 Tbps**

global network edge capacity, consisting of transit connections, peering and private network interconnects

**~50 ms**

from 95% of the world's Internet-connected population

**150+**

AI inference locations powered by GPUs

## Cloudflare for Government

Our unique approach to FedRAMP authorized capabilities gives you maximum capability— everywhere

### Every service at every location

No special FedRAMP enclaves that limits or delays the innovative capabilities you need

### Single platform capabilities

Application and network services delivered consistently from our unified platform

### Direct network connections

Connect your data centers directly to Cloudflare's network for maximum performance and security

### CISA Secure by Design pledge

Cloudflare signed CISA's pledge as part of our commitment to industry-leading solutions that are secure by design and by default

## Cloudflare Universal Advantages

As the world's first connectivity cloud, Cloudflare delivers differentiated capabilities that have earned the trust of millions of customers.

### Significant Cost Savings

Vendor consolidation  
CapEx offload  
Administration

### Threat Intelligence

Extensive visibility  
Threat models  
Intercepted attacks

### Data Localization

Data restriction  
Regulatory compliance  
End user privacy

### Simplicity and Ease of Use

Dashboard  
Integrations  
Automation

## Let Cloudflare help you accomplish your top priorities

Every public sector organization is under pressure to modernize cyber security architectures, deliver trustworthy digital services, eliminate technology debt, and comply with multiple regulatory mandates. At Cloudflare, we're your trusted partner to help you accomplish all of your top priorities.

### Protect

Mitigate risk with advanced security capabilities

- ⚡ Mature Zero Trust architectures
- ⚡ Resilient public-facing applications
- ⚡ Proactive detection and response

### Connect

Power everything with an intelligent connectivity cloud

- ⚡ Work and learn from anywhere
- ⚡ Optimize network and app performance
- ⚡ Enhance service resilience

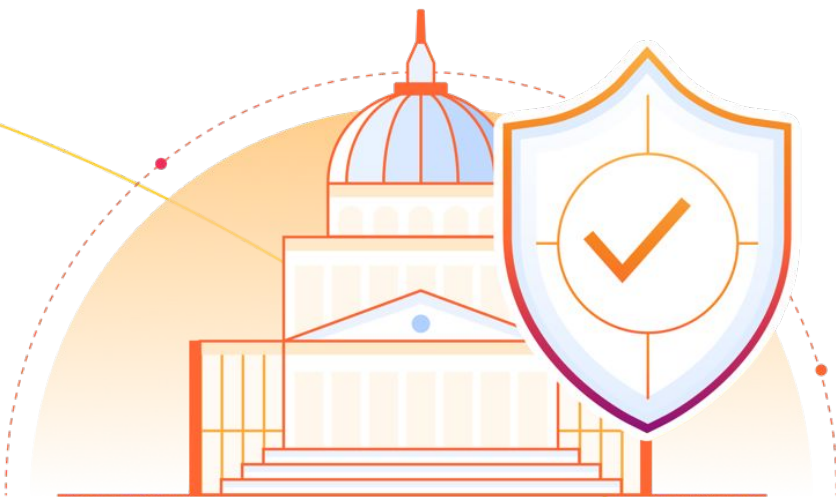

### Accelerate

Modernize faster and increase operational efficiency

- ⚡ Eradicate legacy technology
- ⚡ Reduce costs and complexity
- ⚡ Achieve continuous compliance

## Are you ready to protect, connect, and accelerate your public sector mission?
