

# Implement Zero Trust & SASE with confidence

Quickstart advisory services help keep your deployment on track

## About Quickstart Advisory Services

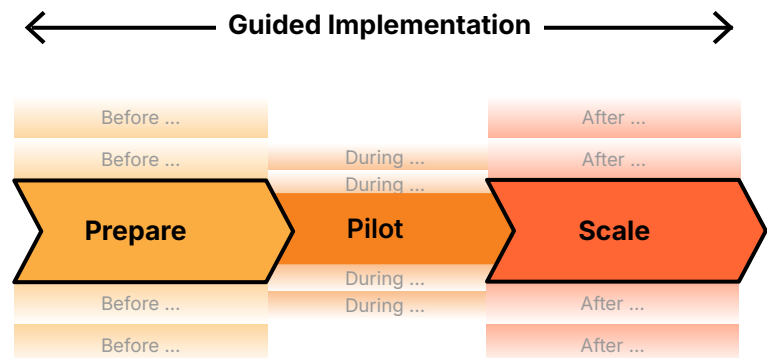

Adding Quickstart to your Zero Trust and SASE deployments provides instant peace of mind, knowing an expert is on hand to guide your team throughout implementation of Cloudflare's solutions that connect and protect your people, devices, networks, and data.

|                                                                                                             |                                                                                                                |
|-------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------|
|  Zero Trust Network Access |  Cloud Access Security Broker |
|  Secure Web Gateway        |  Remote Browser Isolation     |
|  Connectivity On-Ramps     |  Data Loss Prevention         |

Whether replacing your VPN, securing third-party access, or protecting employee Internet browsing, adding an implementation consultant will help you reach your goals more quickly, and with less stress.

## How it works

A Cloudflare consultant provides guidance to **prepare**, **pilot**, and **scale** solutions, accelerating configuration and deployment across your organization. [Quickstart](#) services are available from Cloudflare and our global network of [Accredited Services Delivery Partners](#) (ASDP) and [Global System Integrators](#).

## Benefits

-  4X accelerated deployments
-  Expertise from 100s of customer deployments
-  Globally available with staff in 8 regions
-  Configuration optimized w/best practice reviews

## Engagement phases

| Plan                                                                                                                                                     | Configure                                                                                                                                                        | Test                                                                                                                                                                                         | Deploy                                                                                                                                                    |
|----------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------|
| Kickoff with all stakeholders, followed by technical requirements gathering and design workshops.<br>Deployment objectives and rollout phases confirmed. | Review and confirm account setup and global settings, then prepare to integrate identity provider.<br>Begin guided configuration with implementation consultant. | Policies are created based on technical requirements outlined in design stage and following best practices.<br>Testing begins on pilot group. Adjustments made accordingly for optimization. | Once pilot has completed successfully, deployment is executed across the broader organization.<br>Wrap-up includes project review and knowledge transfer. |

## Available Quickstart packages

Quickstart packages are designed to help you reach your goals successfully, taking into account your environment, user population, and the Cloudflare solution mix being deployed.

Each tier includes a set number of sessions and time allocation, curated from experience deploying a range of use cases from basic, single solution implementations to large enterprise, multi-solution deployments.

| Enhanced                   | Enterprise                  | Enterprise Plus                           |
|----------------------------|-----------------------------|-------------------------------------------|
| 15 Sessions, up to 90 days | 25 Sessions, up to 180 days | 30 Sessions, up to 180 days               |
| VPN Replacement            | VPN Replacement             | VPN Replacement                           |
| or                         | and                         | and                                       |
| Secure Access              | Secure Access               | Secure Access                             |
| or                         | and                         | and                                       |
| Secure Web Gateway         | Secure Web Gateway          | SWG Data Protection (RBI, CASB, DLP, etc) |

**Quickstart engagements are advisory only.**

For business-critical projects requiring hands-on implementation assistance, Cloudflare and our partners offer [Migration and Expert Professional Services](#), which are customizable and include a team of Cloudflare architects and consultants to take the lead from design through execution..

## Plan. Configure. Test. Deploy.

Having someone with experience ride alongside your team throughout implementation minimizes risk of misconfiguration, maximizes everyone's time, and ensures you are able to deploy confidently.

With Quickstart, a consultant accelerates progress by providing:

- Guidance developing success criteria
- Quick responses to technical questions
- Best practices from similar deployments
