

# Cloudflare for Government

Our unique approach to FedRAMP authorization offers maximum capability— everywhere

## Not all FedRAMP solutions are created equal

To paraphrase the Cybersecurity Executive Order (EO 14028), the Federal government will lead the nation by example by bringing the full scope of its resources to defend the American way of life. To do this, the government is making bold investments in transformative cloud services under the Cloud Smart strategy. And it's driving increased demand for FedRAMP-authorized solutions.

However, many of these services are scaled-down versions of enterprise offerings. Vendors can reduce the scope by stripping features away, saving time and effort in a rush to appear in the FedRAMP Marketplace. Then they leave it up to individual agencies to assess the residual risk themselves, often leaving the Federal government short of enterprise-grade capabilities. That makes it difficult to lead by example.

## Cloudflare delivers everything in our FedRAMP environment

At Cloudflare, we're deeply committed to the Federal government. Every agency needs and deserves our full set of innovative capabilities, right now, from a single platform. No one wants to wait – and hope – for missing features to arrive.

That's why we decided to make our full set of services available throughout our entire FedRAMP Moderate authorization boundary.

Today we have 32 FedRAMP data centers across 11 metropolitan areas, interconnected by the Cloudflare global network

We're just getting started, as we continue to to grow our FedRAMP points of presence around the US and the world.

## Cloudflare for Government

### Every service at every location

No special FedRAMP enclaves that limits or delays the innovative capabilities you need

### Single platform capabilities

Application and network services delivered consistently from our unified platform

### Direct network connections

Connect your data centers directly to Cloudflare's network for maximum performance and security

### CISA Secure by Design pledge

Cloudflare signed CISA's pledge as part of our commitment to industry-leading solutions that are secure by design and by default

## Let Cloudflare help you accomplish your top priorities

Every public sector organization is under pressure to modernize cyber security architectures, deliver trustworthy digital services, eliminate technology debt, and comply with multiple regulatory mandates. At Cloudflare, we're your trusted partner to help you accomplish all of your top priorities.

### Protect

Mitigate risk with advanced security capabilities

- ⚡ Mature Zero Trust architectures
- ⚡ Deliver resilient public-facing applications
- ⚡ Detect and respond proactively

### Connect

Power everything with an intelligent connectivity cloud

- ⚡ Work and learn from anywhere
- ⚡ Optimize network and app performance
- ⚡ Enhance service resilience

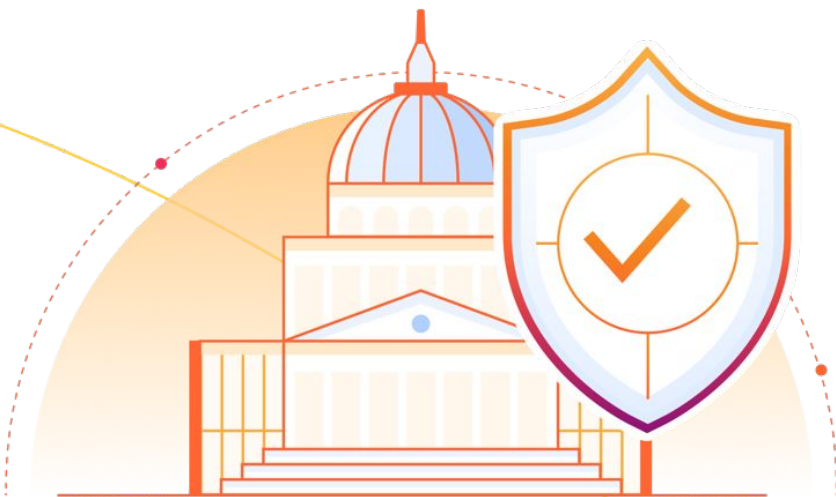

### Accelerate

Modernize faster and increase operational efficiency

- ⚡ Eradicate legacy technology
- ⚡ Reduce costs and complexity
- ⚡ Achieve continuous compliance

## Are you ready to protect, connect, and accelerate your public sector mission?
