

## **One of the world's top underwater ROV manufacturers to display at London's DSEI 2019**

*Deep Trekker returns to the Defence and Security Equipment International (DSEI) trade show with new products for the defense industry*

**September 4, 2019 – Kitchener, Ontario** – With over a decade of proven performance, Canadian company, Deep Trekker, is one of the largest underwater ROV manufacturers in the world – delivering high quality, robust and portable underwater robots to defense and security agencies worldwide. As a global leader in the subsea market, Deep Trekker is proud to announce its appearance at the UK's Defence & Security Equipment International (DSEI) tradeshow in London on September 10-13, 2019.

Deep Trekker is renowned for its innovation, precision engineering and quality products. Most recently, the company launched the DTG3 and the REVOLUTION remotely operated vehicles (ROVs) designed to detect and locate objects hidden beneath the water, assist divers and safely conduct inspections in harsh underwater environments.

Utilizing the latest in technology and in response to a growing market demand, Deep Trekker's underwater robots are now powered by BRIDGE technology, allowing for new and advanced features and third-party integrations.

"With the launch of BRIDGE and our newest REVOLUTION ROV, we are ushering a new era of advanced functions and underwater technology," says Sam Macdonald, President, Deep Trekker.

Deep Trekker invites all interested parties to **Stand N3-505** to learn more about our next-generation underwater vehicles and integrated third-party technologies.

### **About Deep Trekker Inc.**

Deep Trekker Inc. was founded in 2010 with a mission to create portable, affordable, and easy to use harsh environment robotic inspection tools. The company is headquartered in Ontario, Canada, with engineering and manufacturing all completed in house. Based on a clean sheet design, the premiere product, the DTG2 ROV was introduced in August 2011. Since that time, Deep Trekker Inc has developed the DTG3 ROV, Revolution ROV, DT340 Pipe Crawler, DT320 Mini Pipe Crawler, DT640 Utility Crawler and DTPod. With sales in over 80 countries, Deep Trekker robots can be found in industries ranging from aquaculture to municipal contracting, military and defense, search and rescue, shipping, infrastructure and more.
