

The freight market is evolving.

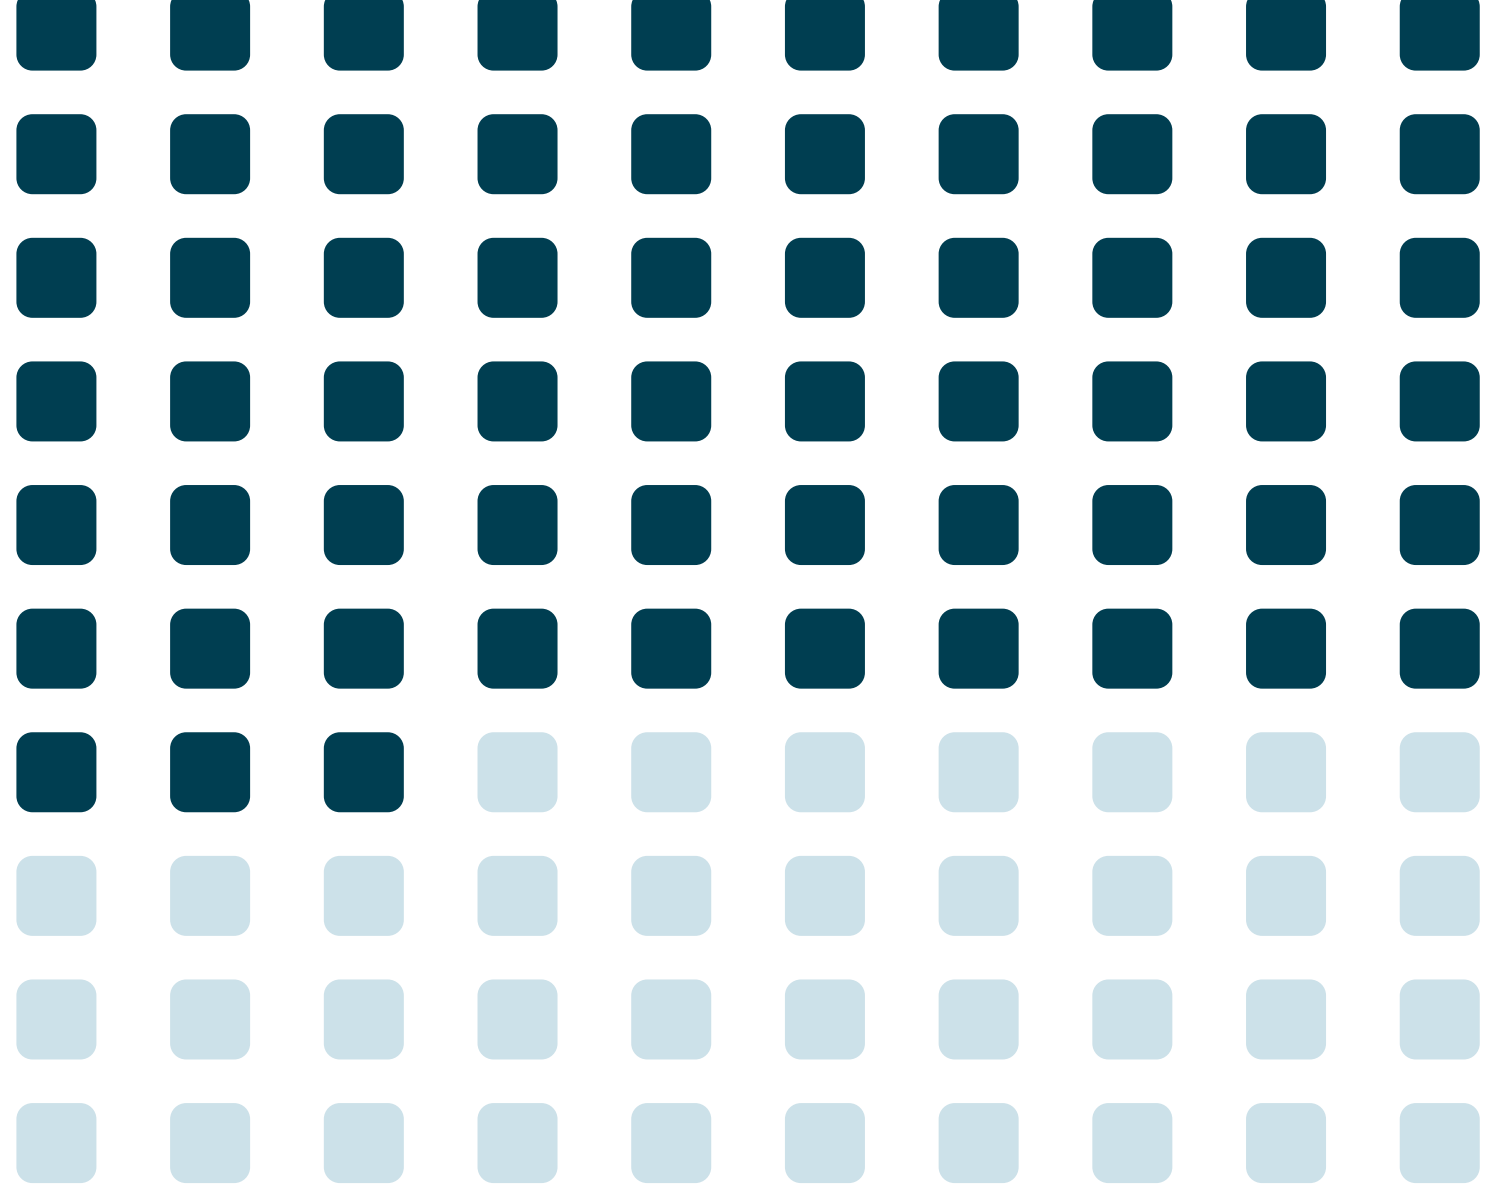

Is your benchmarking?

Real-time, transacted transportation network data powers actionable benchmarking that helps you pay fair-market linehaul rates and identify best-fit carriers by lane.

Do you know the source of your benchmarking data?

Maybe you lack access to real-time market data, or your current method of benchmarking pinpoints problems without providing actionable insights.

With the majority of transportation leaders expecting linehaul rates to remain higher than average in the coming months, you need to transform the way you benchmark to stay ahead.

63% of transportation leaders expect linehaul rates to remain higher than average over the next 12 months

Capac-ID’s advanced benchmarking is:

Real time

Freight marketplaces are dynamic. Your insights should be dynamic, too.

Most industry solutions provide a backward look at linehaul rates primarily informed by third-party input. Capac-ID offers real-time linehaul rates powered by shifting demand for capacity so you know where your network stands in the broader shipper ecosystem.

Contract based

Your transportation challenges need long-term solutions, not Band-Aid fixes.

Knowing whether there’s a truck within a 20-mile radius of your warehouse might help you today. But what about the underlying issue that caused this pinch? Capac-ID identifies the root causes of high-dollar service impact challenges in your transportation network, providing solutions that support your long-term strategy.

Action oriented

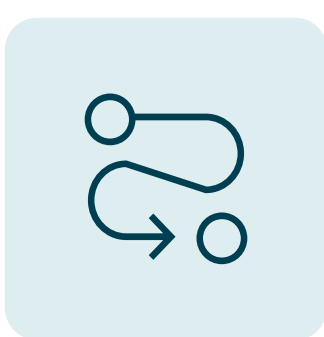

Go beyond problem-spotting tools and embrace problem-solving solutions.

Do you waste time chasing down data when your COO asks how your current linehaul rate compares to industry standards? Capac-ID saves time by delivering the insights you need on a single, C-suite-friendly dashboard — providing fair-market linehaul rates you can pursue today.

Confidence in your benchmarking is only possible when data is relevant

Unlike other benchmarking solutions that fail to provide insights aligned with your unique transportation network strategy, Capac-ID populates its dataset with an aggregate of your and other Breakthrough shippers’ transacted linehaul rates.

Network specific data equips you with:

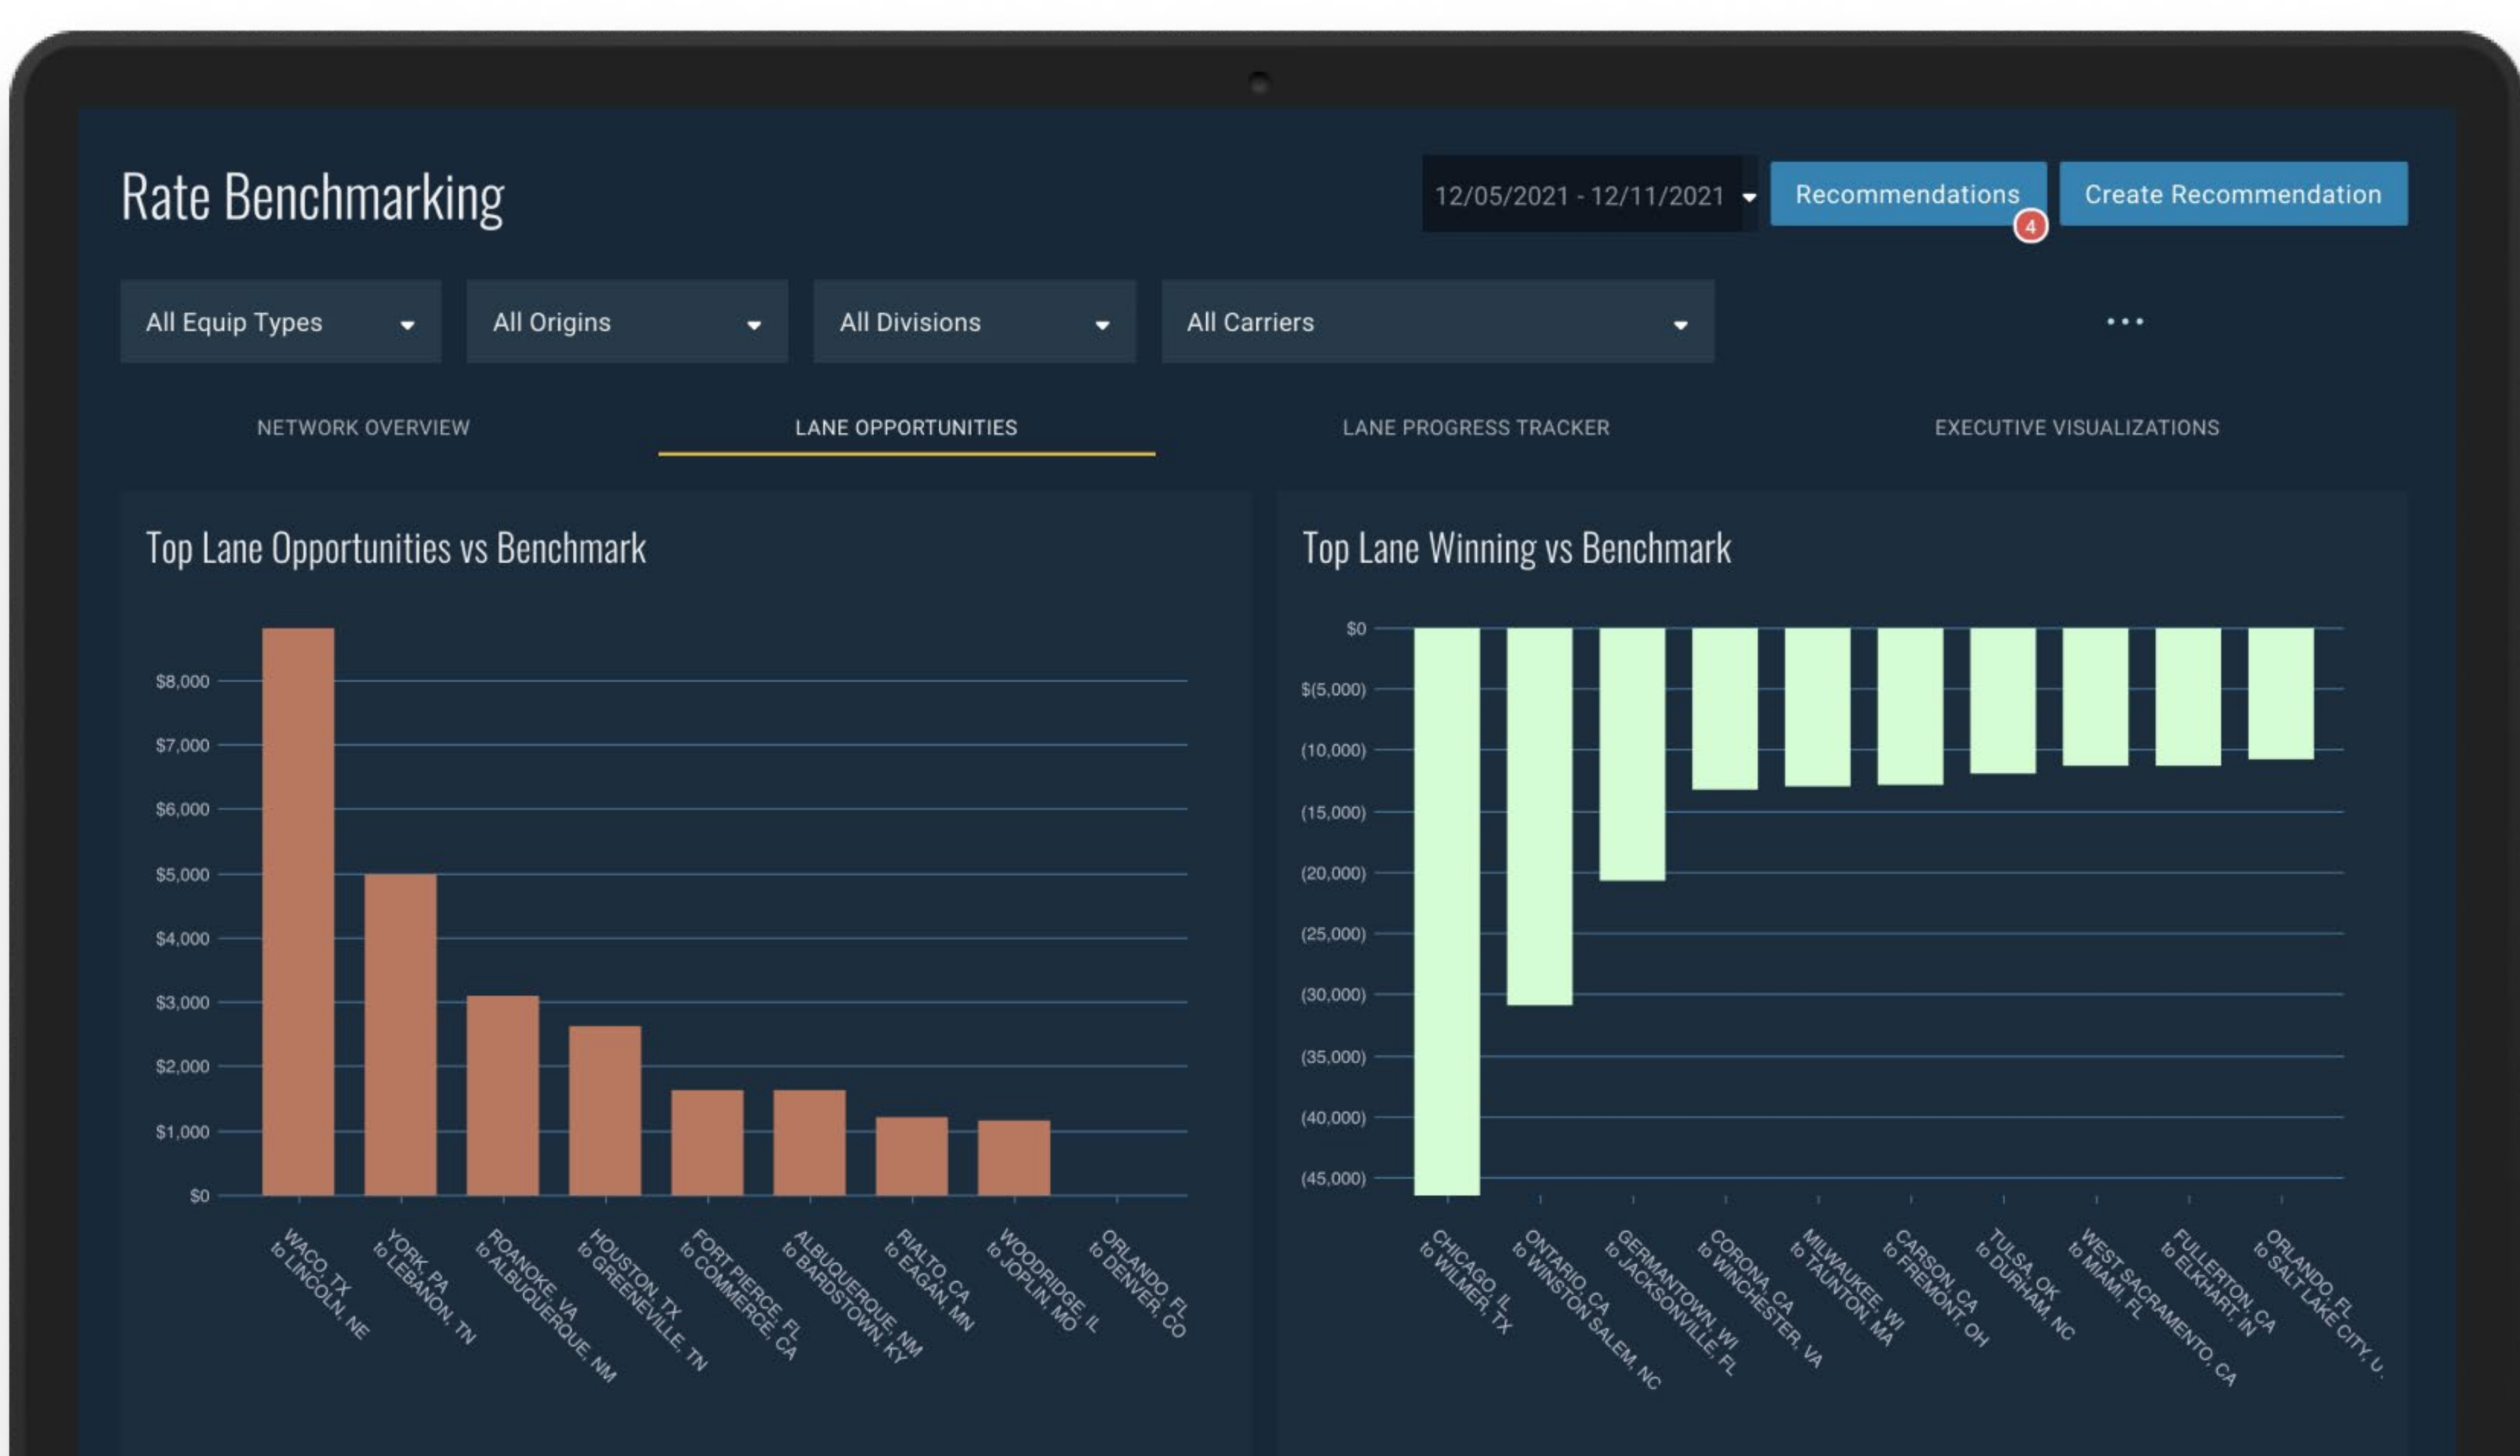

Increased visibility into your network to uncover opportunities

A view of how your network compares to peers

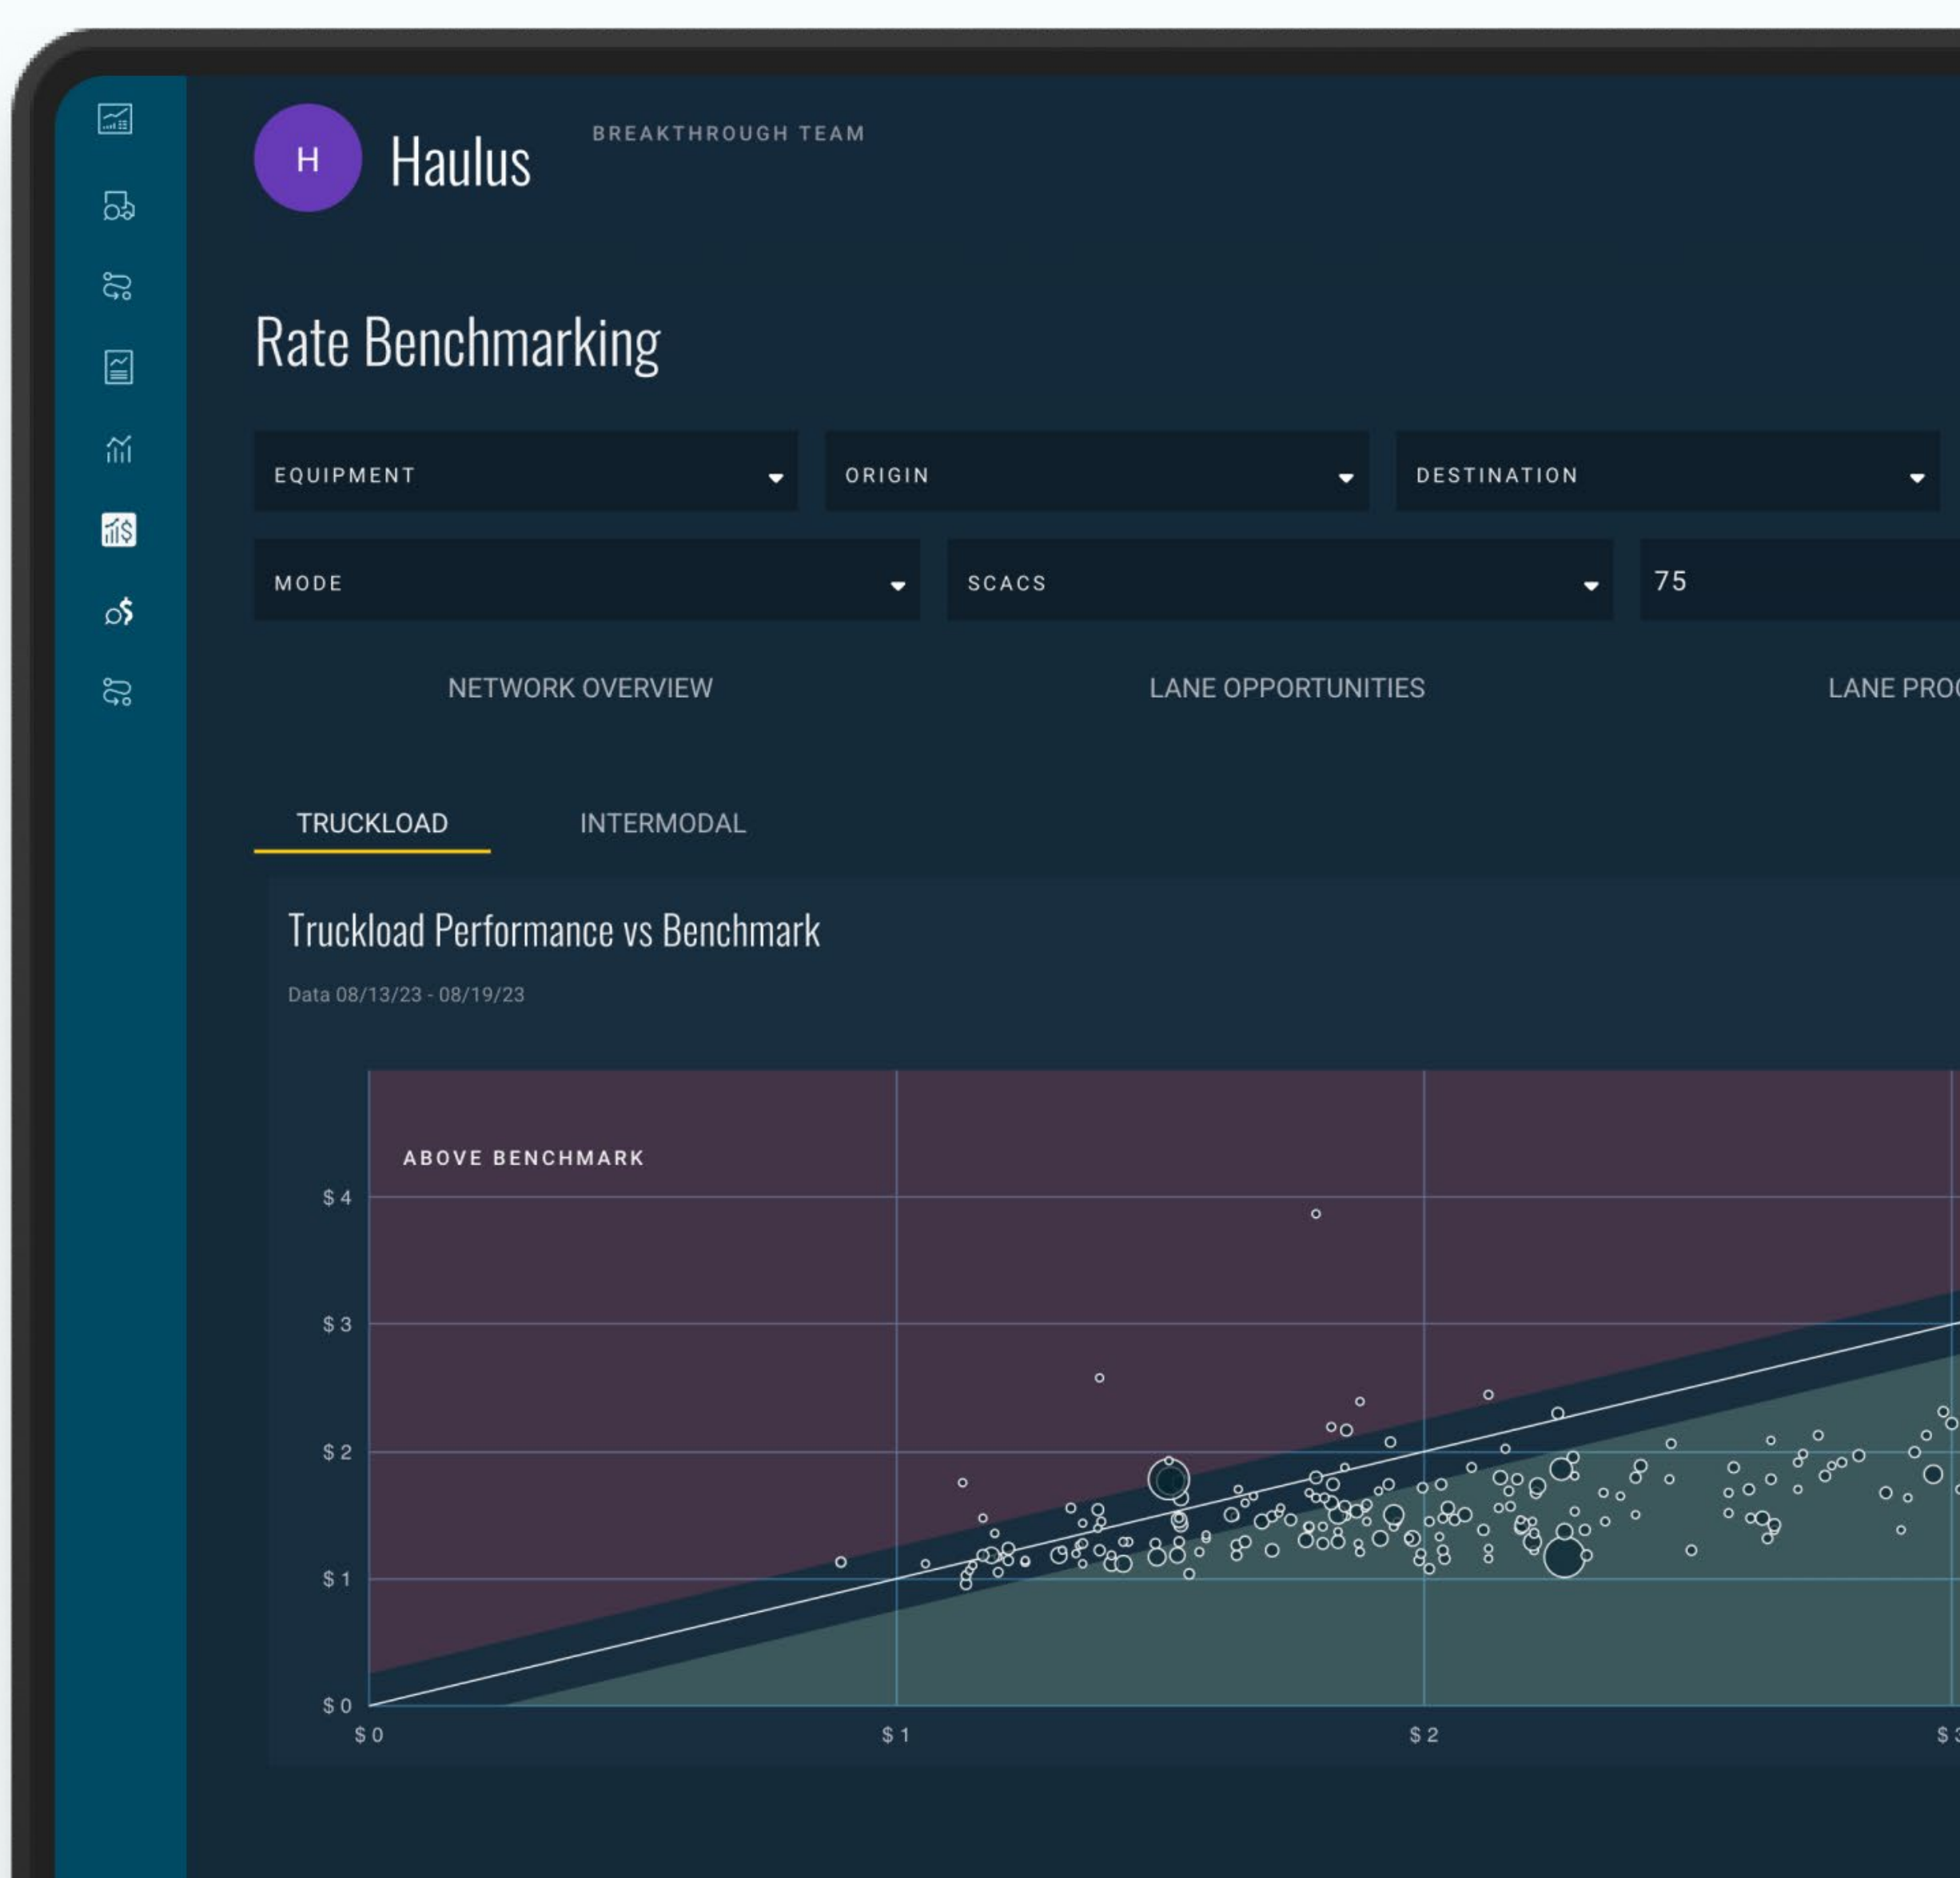

Lane-level carrier recommendations to boost efficiency and reduce costs

Gain the lane-by-lane advantage with Capac-ID

Every decision impacts your bottom line, from lane-level adjustments to partnering with the right carriers. Driving strategic decisions with relevant, real-time data is critical.

Capac-ID offers access to granular network data, **enabling accurate benchmarking and recommendations that empower you** to identify best-fit carriers and optimize your transportation network strategy.

Discover how Capac-ID can level up your transportation network today.
